MANKATO Incubator

$7.25 A bigger bargain than ever—still sells at old price—same high quality redwood case—pure copper tank—double hot water and hot air heat—strong tray. Write today.

Mankato Incubator Co. Box 708 Mankato, Minn.

Ironclad TRADE MARK Wins in the Two BIGGEST HATCHING Contests Ever Held

Why take chances with untried machines when for only $11 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an IRONCLAD—the incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With the Ironclad—the same machine we offer with Brooder freight, paid for only $11, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.

150 EGG ironclads are not covered with cheap, thin metal and painted like some do, to cover up poor quality of material. Ironclads are shipped in the natural color—you can see exactly what you are getting. Don't class this galvanized iron covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tycos Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write TODAY or order direct from this advertisement.

Galvanized Iron, Asbestos, Redwood, Insulated Board, 10-Year Guarantee

Both for $11 Freight Paid East of Rockies

MADE OF CALIFORNIA REDWOOD 150 Chick Brooder

IRONCLAD INCUBATOR COMPANY, Box 113, Racine, Wis.

This 13 year-old Boy built his own Peerless Incubator

My Free Incubator Plan Book tells you exactly how to build the best incubator that can be built. You can build any capacity incubator, single 150-egg size, or Multidek up to 1200 egg capacity—hot air or hot water heated. You can't go wrong and it means a big cash saving to you. I'll supply all the necessary mechanical parts, not easily made by you, at low cost. They insure you a troubleproof machine of highest efficiency at lowest operating expense.

My Sol-Hot Wickless Lamp makes a clear blue flame: smokeless, sootless, odorless—intensely hot. Easily attached to any incubator.

My Peerless, all-metal, 60 egg hatcher is inexpensive and insures big hatches.

Write at once for my Free Incubator and Brooder Plan Book and Catalog.

Has double walls, roomy chick tray. Tall strong legs make it convenient.

Crochet Stitches.

One of our readers, M. L. C., asks us for an explanation of the common crochet stitches. Perhaps others, especially beginners in crocheting, will be interested also and we are giving them herewith. It might be a good plan to clip them out and preserve them so that they will always be on hand:

Chain (ch). Make a slip knot on needle, draw thread through this loop. Again draw thread through this second loop and continue till ch is of length required.

Slip Stitch (sl st). Put hook through work at st indicated in directions; draw thread through work and loop on needle at same time.

Double (d). Put hook through work, thread over hook and draw through, making two loops on needle; thread over again and draw through both loops.

Half treble (h t). Thread over needle, hook through work, thread over and draw through, giving three sts on needle, thread over and draw through the three sts at once.

Treble (t). Thread over the needle, hook through work, thread ov r and draw through, giving three sts on needle; thread over, draw through two, over again and draw through remaining two.

Double Treble (d t). Thread over twice, hook through work, thread o er and draw through, giving four sts on needle, * thread over and draw through two; repeat from * twice.

Long Treble (l t). Thread over three times, hook through work, thread over and draw through, giving five sts on needle, thread over and work all off by twos.

Picot (p). A p is formed on a ch by joining the last four sts (or any given number) in a ring by working a d in the fourth st, counting from hook. In making p on d around the edge of motifs, the d is worked in the top of the last d.

Things to Remember.

To make buttonholes in lace place a tiny square of lawn under the lace where you wish the buttonhole and work through it. After completing the buttonhole cut away the lawn.

To avoid tatters when hanging sheets to dry fold the ends together and pin on line instead of hanging from the middle. You will thus avoid frayed corners.

Crochet thread of any of the different shades—blue, pink, yellow, lavender—may be prevented from fading by soaking in strong salt water before being washed.

Time will be saved by mixing up a quantity of sugar and cinnamon and putting it in a spice can on the shelf. It will be handy for sprinkling over cinnamon rolls, coffee cakes, baked apples, bread puddings, etc.

Even extremely severe burns will be instantly relieved by an application of olive or sweet oil mixed with limewater. To prepare, pour a few drops of olive or sweet oil into a saucer and slowly add limewater, beating constantly. Thicken to a paste and add more of each ingredient until the desired amount is obtained.

White sauce thickening may be made in quantity and kept in a covered jar in a cool place and used as needed for soups, sauces and gravies. Work butter and flour together to a dry paste and use in the following proportions for thickening: For thin sauce use one tablespoonful of paste to one cup of liquid; medium sauce, two tablespoonfuls to one cup of liquid; thick sauce, three tablespoonfuls to one cup of liquid.

Recipes.

Chicken Pie.—Boil two fowls until very tender in just enough water to cover well; salt and let cool in the broth. In the morning pull off the meat in neat pieces adding smaller joints whole if desired; lay in a buttered dish and add a few small potato balls and onions of the same size—both cooked. Make a rich gravy of part of the broth, pour over the chicken and vegetables, and cover with a good pastry-crust decorated with a fluted or fancy rim, pastry rose, and strips. The sides of the dish may be lined with pastry if desired. Cut fancy gashes to let out steam. Cook just long enough to brown crust richly.

Potato Souffle.—Two cupfuls mashed potato, one cupful cream, one teaspoonful salt, two eggs, one-eighth teaspoonful paprika. Add cream and seasonings to potato, add beaten egg yolk and lastly fold in the beaten whites and bake until firm.

Escalloped Macaroni and Corn.—One-fourth package macaroni, one pint corn pulp, salt, pepper, one and one-fourth cupfuls milk, two ablespoonfuls butter. Break the macaroni into one-inch lengths and boil in salted water; drain. Season the corn pulp with salt and pepper, add milk and butter, mix this with macaroni, turn into an earthen dish and brown in a quick oven.

American Kisses.—Into the whites of four eggs, beaten very stiff, sprinkle a level pint of granulated sugar, a teaspoonful at a time. Mix but do not beat in. Add a few drops of vanilla, drop on greased paper in tins, and bake in a moderate oven.

Caramel Custard.—Four cupfuls scalded milk, five eggs, one-half teaspoonful salt, one teaspoonful vanilla, one-half cupful sugar. Put sugar in pan, stirring constantly over hot part of range until it becomes a sirup of light brown color. Add gradually to milk, being careful that the milk does not bubble up and go over, as it is likely to do on account of high temperature of the sugar. As soon as the sugar is dissolved in the milk, add mixture gradually to eggs slightly beaten; add salt and flavoring, then strain into buttered mold. Bake as custard. Chill and serve with cream or sauce.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Ginger Entertains the Company.

Dear Young Folks:—I am a reader of the Young Folks' corner and I enjoy it very much. I live on a farm of 200 acres and I love the country.

I drive to town school every day with my older sister who is a junior in high school. I am in the sixth grade. I wonder how many of the young folks intend to go to high school. I do, and I think everyone should.

Now I am going to tell you about my dog, whose name is Ginger. I have taught him many tricks, such as hunting the spool, running after a ball and playing hide and seek. When my friends come to see me he does his tricks and it amuses them very much. Besides my dog I have two cats, Pink and Teddy, and a pet hen named Biddy.

I love music and can play. I also love to read. I have read a great many books, including Miss Alcott's. I think her books are among the best I have ever read. Sometimes my sister tells me stories and then I have a treat. —Mabel.

Wants Some Indoor Games.

Dear Young Folks:—I enjoy reading the Young Folks' page very much and, as it has been a long, long time since I have written, I will write a short letter.

I go to high school in town four miles from my house. My brother and I both drive every day. I like school very much. We have a good professor and we like our studies

Will some of the Young Folks send some of their favorite indoor games to this page? I would like very much to learn some new games and would appreciate it if someone would tell us how to play them.

I send my love to all the Young Folks and hope they will make our page better every week. Blue Eyes.

Sends Another Riddle.

Dear Young Folks:—I enjoy reading your letters very much, so I think I will write to you. I am ten years old and in the fourth grade at school. I have two brothers. One is four years old and the other is one year old.

I haven't been seeing any riddles, so I will send one. What has a tongue and cannot talk; runs and never walks? —Leonard.

"Standard" Plumbing Fixtures for Bath Rooms

Used the world over. A distinctive style or design to meet every requirement—in every kind of home.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for February 11, 1917.

Jesus and the Woman of Samaria.

LESSON TEXT—John 4:5-14, 24, 26.

GOLDEN TEXT—Christ Jesus came into the world to save sinners.—I Tim. 1.15.

This is a lesson of one of the wayside ministries of Jesus. It occurred incidentally while he was on his way to his great preaching and teaching experience at Galilee. It was a by-product of his very busy life, yet it is one of the most famous interviews a d one of the best examples of how to do personal work that is found in the scriptures. The larger part of the first year of Christ's ministry was spent in Judea. Jesus did not baptize, but his disciples did, doubtless for the same reason, though in a less degree, than why Paul refused to baptize converts (I Cor. 1:13-16). All but one of the disciples of Jesus were Galileans and Jesus spent about a year and nine months of his ministry in that place.

I. Jesus Rested (vv. 4-6). To reach Galilee from Judea Jesus "must needs go through Samaria," not that there were not other ways that he might have traveled, but rather that it was worth while to go out of his way in order to bring the water of life to this needful woman. Jacob's well was at a parting of the roadway near to the city of Sychar. Few places in the land save Jerusalem had so much Bible history connected with them (Gen. 12:6; Joshua 8:33; Acts 7:16; I Kings, 12:1, etc.). The well was originally about 100 feet deep and seven and one-half feet in diameter, but it has been filled up with accumulations of rubbish so it is now only about seventy-five feet deep. Christ was wearied in his work, but not of it, and "sat thus" (by) the well; literally, on the low wall built around it. The sixth hour was probably about midday. There is comfort in consideration of the fact that as a man Jesus was willing to meet this woman of bad character.

II. Jesus Holds Conversation (vv. 7-14). Notice the gentle way in which Jesus speaks, and that he began on the ground of their common need. He asks this needed favor that he might confer a greater one, ignoring the prejudice which existed against the Samaritans. Water was the thing uppermost in the woman's mind. She did not grant his simple request, and her reply indicated that racial differences were a very real barrier. They hinder our work even yet. The surprise, perhaps pleasure, that a Jew should ask a favor of her seems to have greatly impressed the woman, and aroused her curiosity. In verse 10 Jesus tells the woman that there are two things she must needs know: (1) the wondrous gift of God, that is the Holy Spirit (Luke 11:13; Acts 2:23-38); (2) the wonderful man who had asked of her "Give me to drink." Had she known these things she would have asked him for the living water. All that was needful was simply to ask. The Holy Spirit is the living water (John 6:63). The woman does not seem to have comprehended what Jesus was trying to teach, yet he was patient, and won her as a convert. He told her that everyone who came to that well would thirst again (v. 13). The world's fountains do not satisfy, fountains of wealth, fame, pleasure or carnal gratification, or even learning. He then tells her of the living water (v. 14) of which the drinker should never thirst, that it would satisfy whosoever drinks, and was to be everlasting (John 7:37-39). The one who receives the Holy Spirit within has a perennial, eternal spring of life, joy and satisfaction springing up within him. Before the woman received the water of which he was speaking there had to come a conviction of sin (vv. 16-19); hence his remark, "Go call thy husband." This was a sharp thrust into her life and heart. She tried to parry the thrust with a technical question, yet he comes back with a great revelation of the nature of God and the worship which God accepts, revealing his Messiahship (vv. 15-26). As is indicated, she does not seem to have comprehended the nature of the request which Jesus had made (v. 15); therefore he began this searching of her life in order to prepare her to receive the water of life which he wanted to bestow. This knowledge of her secret life by a perfect stranger who had never seen her before was an evidence to the woman of spiritual endowment: "Sir I perceive that thou art a prophet." She then entered upon a theological argument (v. 20) which Jesus answered very simply, saying that the worship of the Father is not to be restricted by time or place (v. 21).

At this point the disciples return and the woman goes into the village.

Jesus, lifting up his eyes to the citizens who were coming out at her invitation, exclaims, "Lift up your eyes and look on the fields, for they are white already to harvest," thereby emphasizing still further the "personal evangelism" thought which is uppermost in this lesson.

She thirsted (v. 14), she received (vv. 25, 26), she became a spring (vv. 28-29) which supplied others (v. 39).

The water of life fully satisfies, and it is a spring (v. 10); it continually satisfies.

Let the North Winds Howl!

WOULDN'T you love to live in a home so thoroughly warmed in winter that a howling northwest blast couldn't push a shiver in edgeways? And wouldn't you love to see your coal bill shrink by more than a third?

Sure you would! And people who live in homes warmed by Caloric Pipeless Furnaces enjoy both these great blessings, and then some.

The "Caloric" Furnace warms a house just as Nature intended should be done. It sends warm air up through ***one register*** to circulate freely to the farthest corner. And as it goes it pushes cool air down, till it sinks through a return channel round the central register, is heated in turn and sent up again as added warmth.

Science and Experience say this is the most sensible and healthful way to warm a home; and think what it saves in trouble and fuel! When a

PIPELESS CALORIC FURNACE (TRADE MARK)

The Original Patented Pipeless Furnace

is installed there is but ***one register hole*** to cut in all the house, and of course no pipes in the cellar nor flues in the walls. This makes it the easiest furnace to install and saves a lot of money. Can be put into an old house as well as into a new, and without inconvenience, regardless of season.

What's the use of making heat and then cooling it down in l-o-n-g pipes before it gets to where you want it—if it ever does get there? A Caloric delivers heat without loss, straight up where you live and need it. Is guaranteed to save 35% of fuel and to keep your cellar cool enough for safely storing fruits, vegetables, etc.

Mr. E. A. Reed, 163 N. 3rd St., Peru, Ind., used to burn $75.00 worth of coal trying to warm a nine-room house with stoves. He put in a Caloric, got perfect results and his coal bill was reduced to $50.00. Suppose you drop Mr. Reed a line, enclosing a self-addressed stamped envelope, and get his experience from his own pen. If you need a furnace or think of getting one it will be well worth while.

There's a Caloric dealer in your town. See him soon. If you don't know who he is, write us and we'll tell you.

Let us send you our free booklet containing our remarkable guarantee.

I MET HIM ON THIS VERY SHIP!

It was within an hour of sailing time. I was on my way home from Europe five years ago. The Mauretania lay beside her Liverpool wharf. Everybody was hurrying to get on, as we were to sail at five o'clock. Suddenly, without warning—without a propeller turning—she commenced to pull away from her moorings. The gang planks creaked--broke loose--and there was quite a commotion as the mighty Mauretania tore loose from her moorings and floated out in the water. It was not a serious accident but it was exciting. In the excitement I met a man leaning over the rail who looked at me and we laughed together. Then we just naturally got acquainted like people do when they are traveling. He was J. J. Berrigan, of Orange, N. J., the famous cream separator expert and inventor. I had never seen him before, but I had heard of him. I told him I was from Waterloo, Iowa, and he said, "You are Galloway." I soon found out that he was the great cream separator expert and a man I was very glad to meet. Naturally we became very well acquainted. He told me what he had done in perfecting cream separator patents and improvements. I told him he was just the man I was glad to get acquainted with. After the Mauretania had been lashed to her wharf again the excitement was over, and we pulled out of Liverpool several hours late--Berrigan and I began to talk cream separator and every day after that we spent several hours together visiting. I told Mr. Berrigan that we were perfecting what I thought was the best cream separator ever produced, and I also told him if he would come to Waterloo and put on the finishing touches, go over the separator, test it, criticize it, find fault with it wherever he could and suggest any possible improvements I would pay him well for his time. In a few days after we landed in New York he did come to Waterloo. He said our separator was one of the finest designs he had ever seen, and with the few recommendations which he made he pronounced it O. K.—good as the best—and better than many of the separators on the market today. Our engineers, designers and separator builders had produced a machine with graceful lines, simplicity of construction, combined all the good features and left out all the faults. Mr. Berrigan commended us on the work and immediately put his stamp of approval upon this machine. That's why I say

We Perfected This Separator

before we offered it on the market. We put out in the hands of farmers and dairymen enough of these separators to know that they would stand up under any test, whether operated and used in the kitchen, the milk house, the creamery or elsewhere, used two or more times per day, every day, week after week, month after month. I JUST WANT YOU TO TRY IT. If you like it, buy it. If you don't, send it back. We pay freight both ways. If the new Galloway Sanitary Separator is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is I could not afford to make this ninety-day trial offer and I could not afford to guarantee it for ten years.

375 lb. Size

$39.90

Buy Direct--Save Money

Try a Galloway Sanitary cream separator for ninety days. Stand it side by side with cheaper machines and you will see the difference in material and workmanship, design and skimming qualities. Stand it beside the highest priced machines, **test them side by side for months.** Higher priced machines will not run any easier or skim any closer, can't be more perfectly sanitary nor better built. I want

You to Read This Book

It tells the story of how we took four years to design and perfect this separator, to build into it every good cream separator feature and retain its beautiful proportions. How we did not build it down to a price, but built it up to a high standard in our own factories right here in Waterloo. It tells how we build Galloway Sanitary Separators from the ground up, how they are designed, and many other separator secrets and facts.

Note these few strong, simple, sanitary parts. Easy to wash clean--no rough edges--no sharp corners. Bowl catches any foreign matter in the milk. Only two shafts in the whole gearing--both of high-carbon steel, in long, perfectly fitted bearings. All gear shaft and both bowl spindle bearings supported by one casting- the gear case. All the working parts run spray of oil. Simple, effective driving clutch on crank shaft.

CHOCK FULL of DAIRY WISDOM

A meaty, exact concise, truthful book about cream separators, engines, tractors, spreaders and other mdse. Why by selling direct I can make a machine as good or better than many high-priced separators sold through other systems. That's why I want you to get this book. It tells the whole story. It tells the truth. It tells the facts. Ask for it today. A postal gets it. Mention separators in writing.

PART IV--One Squaw Man.

CHAPTER IV—Continued.

"It's a case of 'crawl here for a few lengths; pass the word along, and look out for your heads."

The next instant he had vanished under the rock wall—Hardy following him; then a flicker of light shone like a star as a guide for the others, and in five minutes every man of them had wriggled through what seemed but a slit in the solid front.

"A regular cave, by hooky!" said the moral guide from Idaho, as he stood upright at last. His voice echoed strangely. "Hooky; hooky! hooky!" sounded from different points where the shadows deepened, suggesting endless additions to the room where they stood.

Genesee had halted and was splitting up some pine for a torch, using the knife Rachel had cut his bonds with, and showing that the handle was stained with blood, as were the sticks of pine he was handling.

"Look for some more sticks around here, and lend a hand," he said. "We need more than one torch. I burnt up what I had in working through that hole. I've been at it for three hours, I reckon, without knowing, till I got the last stone away, whether I'd be in time or find daylight on the other side."

"And is that what cut your hands?" asked Lieutenant Murray. "Why, they're a sight! For heaven's sake, what have you been doing?"

"I found a 'cave-in' of rock and gravel right at the end of that tunnel," answered Genesee, nodding the way they had just come, and drawing their notice to fresh earth and broken stone thrown to the side. "I had no tools here, nothing but that," and he motioned toward a mallet-like thing of stone. "My tools were moved from the mine over to Scot's Mountain a while back, and as that truck had to be hoisted away, and I hadn't time to invite help, it had to be done with these;" and he held out his hands that were bleeding—a telling witness of his endeavors to reach there in time. And every man of them felt it.

There was an impulsive move forward, and Hardy was the first to hold out his hand. But Genesee stepped back, and leaned against the wall.

"That's all right, Hardy," he said, with something of his old careless smile. "I'm glad you're the first, for the sake of old times; but I reckon it would be playing it pretty low down on a friend to let him take me in on false pretenses. You see I haven't been acquitted of horse stealing yet—about the most low-lived trade a man can turn to, unless it is sheep stealing."

"Oh, shaw!" broke in one of the men, "this clears the horse business so far as I'm concerned, and I can bet on the other boys, too!"

"Can you?" asked Genesee, with a sort of elated, yet conservative, air; "but this isn't your game or the boys' game. I'm playing a lone hand, and not begging either. That torch ready?"

The rebuff kept the others from any advance, if they had thought of making it. Lieutenant Murray had picked up the stone mallet and was examining it by the flickering light; one side was flattened a little, like a tomahawk.

"That's a queer affair," he remarked. "What did you have it made for?"

"Have it made! The chances are that thing was made before Columbus ever managed a sail boat," returned Genesee. "I found a lot of them in here; wedges, too, and such."

"In here?" and the men looked with a new interest at the rocky walls. "What is it?"

"An extension I tumbled into, over a year back, when I was tunneling at a drift the other side of the hill. One day I found that hole there, and minded it this morning, so it came in handy. I reckon this is the original Tamahnous mine of the old tribe. It's been lost over a hundred years. The Kootenais only have a tradition of it."

"A mine--gold?"

"Well, I was digging for a silver

Easier to Put Up Fits the Ground

THE "swinging joint" lets line wires swing freely with the ground. Fits hilly ground as smoothly as level stretches. This gives you a better looking fence—a longer lasting fence—and a more easily erected fence. Stays are doubly strong at every joint—strains and shocks are evenly distributed—fence keeps its shape. Write for the "APEX WAY"—learn how you can save work and money fencing your farm with Apex Fence and

APEX Steel Drive Posts

Made of elastic carbon angle steel. Here is the ideal fence post for the up-to-date farm. It is strong—light in weight. Costs less than wood posts set in place—lasts for generations. No post holes needed—you save cost of digging and tamping posts—save big share of hauling and handling. Steel posts ground the lightning and protect stock—you can burn fence rows clean.

Apex Posts can be driven through any soil, gravel or soft shale without injury. Replace decayed posts in old fences with Apex Posts and save the ugly job of digging holes next to standing fence.

show when I struck it," answered Genesee; "and, so far as I see, that's what was here, but it's worked out. Didn't do much prospecting in it, as I left the Kootenai hills less than a week after. I just filled up the entry, and allowed it would keep till I got back."

"Does it belong to you?" asked one man, with speculation in his voice.

Genesee laughed. "I reckon so. Tamahnous Peak is mine, and a few feet of grazing land on the east. Nobody grudges it to me up this way. Indians think it's haunted, 'cause all the rocks around it give echoes; and I—"

He ceased speaking abruptly, his eyes on the pile of debris in the corner. Then he lit a fresh torch from the dying one, and gave the word to strike for the outside, following single file, as the hill was pretty well honey-combed, and it was wise to be cautious.

"Because," said their leader, "if any should stray off, we might not have time this day of our Lord to come back and hunt him up."

Before leaving what seemed like the back entrance, he walked over to the corner and picked up the thing that had arrested his attention a minute before, and slipping it in his pocket, walked to the head of the long line of men, several of whom were wounded, but only one less than the number who had left camp. And the one lacking was the man who had fired the first shot and killed the messenger from Grey Eagle—he himself dying from a wound, after the ride into the gulch.

As the scout passed the men, a hand and a pair of gloves were thrust out to him from a group; and turning his torch so that the light would show the giver, he saw it was Stuart.

"Thank you, sir," he said, with more graciousness than most of the men had ever seen in him; I'll take them from you, as my own are damaged some," They were torn to shreds, and the fingers under them worn to the quick.

The echoing steps of the forty men were as if forty hundred were making their way through the mine of the Tamahnous; for no living tribe ever claimed it, even by descent. The hill that contained it had for generations been given by tradition to the witches of evil, who spoke through the rock—a clever scheme of those vanished workers to guard their wealth, or the wealth they hoped to find; but for what use? Neither silver in coin nor vessel can be traced as ever belonging to tribes of the Northern Indians. Yet, that honeycombed peak, with its wide galleries, its many entries, and well-planned rooms, bespoke trained skill in underground quarrying. From some unseen source fresh air shifted through the darkness to them, and the tinkle of dripping water in pools came to their ears, though the pools were shrouded in the darkness that, just beyond the range of the few torches, was intense; and after the long tramp through echoing winds and turns, the misty dawn that was still early seemed dazzling to the eyes, red and haggard from the vigil of the night.

"You will have to get away from here on a double-quick," said Genesee sharply, after a glance at the sky and up the sides of the hill from which they had come. "Once down there in the valley, the fog may hide you till sun-up, and then, again, it mightn't. Just mind that they have horses."

"We are not likely to forget it," was Captain Holt's answer; and then hesitated a moment, looking at Genesee.

"Are you not coming with us?" asked Lieutenant Murray, giving voice to the question in his commander's mind as well as the others.

"Yes, part of the way," said the scout quietly, but with a challenge to detention in the slight pause with which he glanced at the group; "but I have a beast to carry me back, and I'm just tired enough to use it." And disappearing for a minute in the brush, he led out Mowitza, and, mounting her, turned her head toward the terraces of the lower valley.

They passed the isolated cabin that brought back to Stuart the steps of the Tamahnous and along the little lake, all swathed alike in the snow and the mist leaving null all character in the landscape.

The cabin was commented on by

the men, to whom it was a surprise, looming up so close to them through the cloud curtain.

"That's mine," their guide remarked, and one of them, puzzled, stated it as his belief that Genesee claimed the whole Kootenai territory.

The scout gave up his saddle to a man with a leg wound, but he did not let go the bridle of Mowitza; and so they went on with their guide stalking grimly ahead, ready, they all knew to turn as fiercely against them at a sign of restraint as he had worked for them, if a movement was made to interfere with his further liberty.

The sun rolled up over the purple horizon—a great body of blushes suffusing the mountains; but its chaste entrance had brazened into a very steady stare before it could pierce the veil of the valleys, and pick out the dots of moving blue against the snow on the home trail.

It had been a wonderfully quiet tramp. Most of the thoughts of the party were of the man walking ahead of them, and his nearness made the discussion of his actions awkward. They did not know what to expect of him, and a general curiosity prevailed as to what he would do next.

They learned, when at last the ridge above camp was reached, about the middle of the forenoon. He had been talking some to the man on Mowitza, and when they reached that point he stopped.

"Whereabouts?" he asked; and the man pointed to a place where the snow was colored by soil.

"Over there! I guess the boys buried him."

"Well, you can get down from that saddle now. I reckon you can walk down to camp; if not, they can carry you." Then he turned to the rest.

"There's a body under that snow that I want," he said sententiously. "I'm not in condition for any more digging," and he glanced at his hands. "Are there any men among you that will get it out for me?"

"You bet!" was the unhesitating reply; and without question, hands and knives were turned to the task, the man on horseback watching them attentively.

"May I ask what that is for?" asked Captain Holt; at last, as amiably as he could, in the face of being ignored and affronted at every chance that was given Genesee. He had saved the commander's life; that was an easy thing to do compared with the possibility of hiding his contempt.

He was openly and even unreasonably aggressive—one of the spots in his nature that to a careless eye would appear the natural color of his whole character. He did not answer at once, and Captain Holt spoke again:

"What is the object of digging up that Indian?"

Then Genesee turned in the saddle.

"Just to give you all a little proof of how big a fool a man can be without being a "permanent" in a lunatic asylum."

And then he turned his attention again to the men digging up the loose earth. They had not far to go; small care had been taken to make the grave deep.

"Take care there with your knives," said Genesee as one shoulder was bared to sight. "Lift him out. Here—give him to me."

"What in——"

"Give him to me!" he repeated. "I've given your fool lives back to forty of you, and all I'm asking for it is that Kootenai's dead body."

Stuart stopped and lifted the chill, dark thing, and other hands were quick to help. The frozen soil was brushed like dust from the frozen face, and then, heavy—heavy, it was laid in the arms of the man waiting for it.

He scanned from the young face to the moccasined feet swiftly, and then turned his eyes to the others.

"Where's his blanket?" he demanded; and a man who wore it pushed forward and threw it over the figure.

"Denny took it," he said in extenuation, "and when Denny went under, I took it."

"Yes!" and again his eyes swept the crowd. "Now, I want his rifle, his knife, a snake skin belt, and a necklace of bear's teeth—who's got them?"

"Well, I'll be hanged!" "How's that for second sight?" "It beats glass-eyed fishes!" were some of the sotto-voce remarks exchanged at the enumeration of the things wanted.

"I've no time to waste in waiting," he added. "If they're in this crowd and ain't given up, I'll straighten the account some day, if I have to hunt five years for the trail to them. I'm a-waiting."

His hand was laid on the breast of the dead Indian as he spoke, and something in the touch brought a change to his face. The hand was slipped quickly inside the fringed shirt, and withdrawn clasping a roll of parchment cured in Indian fashion. A bitter oath broke from him as he untied the white sinews of the deer, and glanced at the contents.

"What is it? What is it?" was the question from all sides.

Genesee, in a sort of fury, seemed to hear most clearly that of the, for the hour, displaced commander.

"I'll tell you what it is!" he burst out wrathfully. "It's a message of peace from the Kootenai tribe—an offer of their help against the Blackfeet any time the troops of the United States need them. It is sent by Grey Eagle, the oldest of their war chiefs, and the messenger sent was Grey Eagle's grandson, Snowcap—the future chief of their people. And you have had him shot down like a dog while carrying that message. I wouldn't have blamed them if they had scalped every mother's son of you."

To say that the revelation was impressive, would express the emotions of the men but mildly. Captain Holt was not the only one of them who turned white at the realization of what a provoked uprising of those joint tribes would mean, in the crippled condition of the camp. It would mean a sweeping annihilation of all white blood in their path; the troops would have enough to do to defend themselves, without being able to help the settlers.

"In God's name, Genesee, is this true?" and forgetting all animosity in the overwhelming news, Holt pressed forward, laying his hand on the shoulder of the dead messenger.

"Take it off!" yelled Genesee, looking at the unconscious hand that involuntarily had moved toward him. "Take it off, or I'll cut it off!"

And his fingers closing nervously on the hunting knife emphasized his meaning, and showed how stubborn and sleepless were the man's prejudices.

The hand dropped, and Genesee reached out the document to one of the crestfallen scouts.

"Just read that out loud for the benefit of anyone that can't understand my way of talking," he suggested with ironical bitterness; "and while you are about it, the fellows that stripped this boy will be good enough to ante up with everything they've got of his—and no time to waste about it either."

And Captain Holt, with a new idea of the seriousness of the demand, seconded it, receiving with his own hands the arms and decorations that had been seized by the victorious Denny, and afterward divided among his comrades. Genesee noted that rendering up of trifling spoils with sullen eyes, in which the fury had not abated a particle.

"A healthy crew you are!" he remarked contemptuously; "a nice, clean-handed lot, without grit enough to steal a horse, but plenty of it for robbing a dead boy. I reckon no one of you ever had a boy that age of your own."

Several of them—looking in the dark, dead face—felt uneasy, and forgot for the moment that they were lectured by a horse thief; forgot even how light a thing the life of an Indian was anyway.

"Don't blame the whole squad," said the man who took the articles from the Captain and handed them up to Genesee. "Denny captured them when he made the shot, just as anyone would do, and it's no use cussin' about Denny; he's buried up in that gulch—the Kootenais finished him."

"And saved me the trouble," added the scout significantly.

He was wrapping as well as he could the gay blanket over the rigid form. The necklace was clasped about the throat; but the belt was more awkward to manage, and was thrust into the bosom of Genesee's buck-

(Continued on page 28.)

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Blackleg.

I had blackleg among my calves last fall and lost five out of fifteen of them. I have bought twelve more. Would it be all right to bring them on the place now or should I vaccinate them before bringing them home?

It is best to vaccinate against blackleg if you have had it on your place.

Sore Eyes.

We have a horse that has sore eyes. Sometimes they look all right and at other times a green spot will show in one or the other. Our veterinarian said it was moon blindness. Is there any treatment?

Your veterinarian is probably right as to the cause of the eye trouble in your horse and it is very probable you can do no good by treatment.

Round Worms.

I have two fillies which have white worms. They are four or five inches long, pointed on both ends. Would you please give me a treatment for these?

Your horses are bothered with round worms. Give each one oil of turpentine, three ounces, with oleoresin of aspidium in a pint of linseed oil, or you may give santonin, three to four drams, in oil.

Lice on Horses.

Can you give through your paper a remedy to kill lice on horses? They rub their tails a great deal. Would be very thankful for any advice.

It is rather hard to treat animals successfully for lice in the wintertime unless the quarters are clean. The lice may be destroyed by using a solution composed of sulphuret of potassium, four ounces in one gallon of water, or the skin may be sponged with gasoline. The ordinary dips may be put in solution and used. Give the animal good food and frequent groomings. You might try some good lice powder while the weather is cold.

Abortion.

I have a bunch of cows and am having trouble with them losing their calves before time. I had one cow that lost her calf in August and four that lost their calves since then, two of which lost them in the last few days. I have five more cows that seem all right. I would like to know if this is contagious and if there is any way of preventing it. Will these cows be apt to lose their calves next time?

Your cattle may be affected with contagious abortion. However, we could not state this with certainty. You should segregate those which have and keep them away. Clean up and disinfect your premises. Have your herd examined by a competent veterinarian and get him to co-operate with you in ridding your premises of this trouble.

I have a herd of about thirty cows and heifers. Most of these were bred to an Angus bull last year. Last February I bought a Short-horn bull, five years old. A short while after we got this bull we had a heifer that we bought and which was not bred to our Angus bull lose her calf. It was not near matured. This Short-horn bull bred this heifer before we shipped. Our calves came all right that were by the Angus bull, but six weeks ago those bred to the Short-horn began to lose their calves. Have lost eight or ten up to date and most of the heifers have to be cleaned by a veterinarian. What I want to know is this: Can the rest be treated so they will not abort, and how is this abortion spread by the male, or do the females take it from one another?

It is evident there is abortion of some kind in this herd. It may be of a contagious nature. In answering your first question would say keep your affected animals strictly away from those not affected and clean the premises up thoroughly and disinfect. There is some claim of good results in prevention by the use of abortus bacterius, but these claims are not very well founded. Females cause a spread of the disease by contaminating the litter, walls, etc., from discharges. The male can be treated so he will not spread the disease if his sheath is cleansed before and after serving. This should be done with a 1 or 2 per cent solution of lysol. If you will read the article on contagious abortion in the August 17th number it will enlighten you further.

Feeding Wormy Stock IS LIKE Throwing HIGH PRICED Feed to the Winds

Animals that are full of worms can't thrive. Not only that, but they are liable to contract dangerous disease — infect your entire herd and finally be the means of wiping out all your livestock. Again, feeding worm-sick, worm-infested animals is like throwing high priced feed away.

The worms consume more than your live stock. That's why they won't gain; why they are rough coated, stunted, unprofitable. They need a worm-destroyer and conditioner

THOUSANDS WRITE:—
"Sal-Vet Saved My Live Stock"

"I have fed SAL-VET to four horses, one of which had grown very thin, and was infested with worms. Before I had fed it 60 days, he gained two hundred pounds, on the same feed."
WILLIAM G. WASHBURN, Hopewell Jct., N. Y.

"I had 300 lambs badly infested with stomach worms and considerably run down. Put them on SAL-VET and they made a gain of 40 lbs. per head. I'll never be without SAL-VET." W. S. PATTON, Plattsburg, O.

"I had one pig that did not seem to get any good from its feed and I would have taken $3.00 for it. After feeding it SAL-VET for six weeks I sold it for $11.50."
HARRY BABB, Rt. No. 1, Goshen, Ind.

"All summer I have been feeding SAL-VET to a number of my hogs. I have not lost a single hog, but my neighbors all around here have lost hundreds of their hogs."
W. T. HUCKSTEP, Denison, Iowa

SAL-VET
REG. U.S. PAT. OFF.

Saves your stock from the ravages of blood-sucking, disease-breeding, feed-eating worms

It saves your feed—makes your stock thrifty, healthy, profitable, by ridding them of these pests and letting them get full benefit of their feed. SAL-VET is the medicated salt which has saved thousands of dollars for farmers — not only saved their animals, but saved feed, time and labor, so often wasted on worm-sick stock. You ought to protect yourself against such loss. Let me show you how surely and cheaply you can do it with SAL-VET.

Valuable Live Stock Book FREE

Tell me how many head of stock you have, and the name and address of your dealer and I'll send the book FREE. I'll also tell you where and how you can get enough SAL-VET to feed your stock 60 days and have your money refunded if SAL-VET fails to do all I claim. SAL-VET costs only 2½c a month for each hog and sheep and only 10c a month for each horse, mule or head of cattle. You take no risk whatever. Mail the coupon to me NOW. Address

Mixture to Put With Slack Coal.

Please tell me a good mixture to feed with slack coal, as coal itself is on the binding order and I would like to know what to feed with it so as to keep the pigs' bowels loose.

Mix wood ash and plenty of salt with the slack coal, and this will help keep the bowels loose.

Killing Canada Thistle.

I have a patch of Canada thistles on my farm and want to know how to destroy these pests. They have now spread over an area of about five acres.

Plow the land early in the spring and keep the surface cultivated so as to prevent the growth of thistles. It may require disking every ten days or two weeks. Keep this up during the spring and summer and sow winter wheat about the middle of September. If the work is thoroughly done it is sometimes practicable to sow cane at the rate of 100 pounds per acre about the middle of July. This makes a smother crop.

Bog Spavin.

I have a two-year-old mule that has a bog spavin on his left hind leg. It is a soft place just in front of the joint. It appeared when he was just a yearling. It seems to grow, but he is not lame. Would caustic balsam remove it, or can I use anything at all that will cure him? Would it do to open it and have it washed out? Any advice will be appreciated.

Since this is a case of long standing we would advise you to apply a cantharides blister two or three times at intervals of two or three weeks. You may never be able to remove this, but you may be able to check the growth. This joint should not be opened under any consideration unless an expert has the superintending of the case.

Indigestion in Pigs.

I have a herd of six Chester White pigs that are sixteen weeks old. I bought them when they were five weeks old and they had not been weaned. At first I had to feed them milk in order to get them used to the trough. Then I changed to ground oats and whey. They came along fine until about four weeks ago, when they commenced to bloat and force out part of their rectum. So I fed them whey and wheat middlings. That seemed to be all right for four weeks until tonight I fed them one pailful of whey and middlings (warm) the same as usual. In a few minutes I heard one of the pigs squealing and it was running and throwing itself and fifteen minutes later it was dead and as tight as a drum. What do you think causes this? What can I do to save the other five?

Your pigs are in all probability subject to attacks of indigestion and this is probably brought about by the feed. Change the feed—give the milk to them feeds of oats if they will eat them.

Laryngitis.

I wish you would tell me what ails my Scotch Collie dog. About five or six weeks ago he began coughing and seemed to gag some. When he runs he wheezes. He is getting worse and eats very little now. He is a year and a half old.

Your dog may have laryngitis. Try the following treatment: Keep the dog warm and dry, free from drafts, but where there is plenty of pure, fresh air. Feed soft food, such as broth or new milk for a few days. Give chlorate of potash in two or three-grain doses on the back part of the tongue two or three times a day.

Spavin.

I have a spavined brood mare and I have been advised not to try to cure the spavin until the mare has colt. My question is: Can I try to cure the spavin promptly without injury to colt? Also would you advise giving her worm powders before the colt arrives, or would it be dangerous to the colt?

It will depend upon the treatment whether or not she should be treated before foaling or not. If blistering is to be resorted to, it is all right, but if firing is resorted to, let her alone till later. If worm powders are mild in action, it is all right to give them, but if drastic in nature do not give them now.

Scabby Condition in Calves.

My calves are dying from some kind of scab which they have had for some months. It starts around the eyes and nose and spreads, the hair coming off. They do not seem to be sick at all, but do not grow or thrive, get poor and then die. The scab resembles ringworm but it is not very sore. Shows a little soreness when it starts, then heals up, but the scab keeps forming and no hair has time to come back.

Your calves may either have ringworm, or may have mange of some description. It is very necessary to find out what the trouble is before treatment is begun. This can only be told with certainty by a careful examination by a competent veterinarian.

Injury to Teat.

I would like to know what I can do with one of my milk cows. A few months ago she torn off just the tip of her hind teat. I washed it and put salve on it and it healed again, but very slowly. I always had to milk her and that kept it sore and made it worse. Then I let her go dry on that teat, but now it is hard and hot and there seems to be something in it all the time which feels like milk. It has grown shut though and will not let the milk through. I am afraid that it will get worse. She is about five months with calf again. Will you please tell me what to do?

Serious trouble may arise from the closure of this teat. First, inflammation seems to be present, and this might be followed by suppuration. You had better have this cow examined by a veterinarian and have treatment advised according to findings before more serious trouble arises.

Chronic Catarrhal Enteritis.

I have a registered Duroc Jersey boar pig that took the scours about a month ago and I am not able to get him right again. Have been giving him boiled sweet milk and shorts for slop and corn and oats for feed, but he does not seem to have much appetite.

This animal is probably troubled with a chronic catarrhal condition of the bowels. It may persist for weeks. Give less quantity of water. Give moderate amount of easily digested food. If the trouble persists, give from one to two tablespoonfuls of tincture of camphorated opium in warm milk twice daily for two or three days.

Comfort for Cows

Keep the cow's udder free from irritating conditions and the milking will be easier the yield better. Bag Balm is a soothing, penetrating ointment that quickly heals all cuts, chaps, bruises, sore cracked or injured teats. A sure relief for caked bag, and useful in treating bunches and stricture.

Large 50c package, sold by druggists and feed dealers. Ask for free booklet, "Dairy Wrinkles."

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

The Pagel Offering, February 26th.

IT IS always a pleasure to recommend any good herd of hogs and a good breeder back of them. In view of that fact we are glad to recommend and introduce Geo. W. Pagel, of Zumbrota, Minn., to the readers of The Wisconsin Farmer. Pagel will sell 40 Duroc Jersey sows at his farm adjoining Zumbrota, on Monday, February 26th, and he has a sale offering that he need not offer apologies for. Mr. Pagel is a good care taker and he has fed and cared for his Durocs in a way that will prove profitable to the buyer. Most everything in the sale is showing safe in pig to one of the two good boars on the farm. We were very much impressed with the boar, H. C. Wonder. He has an ideal head and ear, a back that is arched and will never go down, stands on the best of feet and has great depth with plenty of length. Many in the sale have been bred to this boar and the Wisconsin breeders will make no mistake if they get a litter by him. He is well bred, being by Big Wonder, the most perfect Duroc Jersey boar that was ever shown at the Iowa State Fair, where he was grand champion. The dam traces two times to the noted Chief's Col There will be sows in the sale out of a daughter of old Marion's Wonder—it is needless to say that they are large. But then get the catalog, it is very descriptive and contains pictures of the boar. Don't forget the date and place. Zumbrota is on the Milwaukee from Wabasha to Faribault and on the Great Western between Rochester and Red Wing. Good connection from any point on the Missippi river. Wisconsin breeders can get to and from this sale the same day. Write at once for the catalog and please mention The Wisconsin Farmer. T. P. Shreve will handle mail bids at the sale. See page 29. —Adv.

Kennedy Makes Valuable Short-horn Additions.

J. E. KENNEDY, Janesville, Wis., continues to improve his herd of Short-horns by buying the best females that money could buy. At the Thos. Stanton Short-horn sale held in Chicago, January 16th and 17th, Mr. Kennedy was a heavy buyer of the better sorts. The fact that he paid an average of $808.50 for ten females is proof that he is only buying the good ones. He also purchased a bull calf out of a daughter of Sultan's Fashion sired by the International champion, Selection, for which he paid $2,000. The dam of this calf sold in the sale for $1,800. Keep an eye on this man, Kennedy, for he will have a herd second to none in Wisconsin, or the Northwest. In view of the fact that Mr. Kennedy desires to have an all Scotch herd of Short-horns and inasmuch as he needs the room for his recent purchases, he will now sell six very choice Scotch topped cows of the dual-purpose caliber. They are safe in calf to Village Denmark 8th, one of the three best bulls in the state. Attractive prices are being made for immediate sale. Wrie at once for further information and please mention The Wisconsin Farmer. See page 28. —Adv.

Purchased Short-horn Bull in New York.

MARQUART BROS., Milton Junction, Wis., progressive breeders of high-class milking Short-horns, have just purchased a bull from H. E. Tener, who has more imported Short-horns than any breeder in the East. The bull is sired by Royal Duke, grand champion bull (milking Short-horn) at the New York State Fair, whose dam and grandam each have a record of over 10,000 pounds of milk in a year. The dam, Rosebud, was a first-prize winner at four of the leading shows in England, weighs 1,670 pounds and has a record of over 8,000 pounds. This young bull will be crossed on daughters of Queenston Duke, Kinsella Lad and Clay Laddie, bulls of Glenside breeding. The Marquarts have an excellent herd of cows. They keep an exact record of each cow and these must come up to a certain standard or she cannot retain a berth in the herd. Their cows have great scale, broad backs and square udders. They have several young bulls for sale. Keep this herd in mind. We will have more to say about them at a later date.—Adv.

Start at Lancaster, Wis.

NEXT week will be the "big week" for Poland China men in Wisconsin, for there will be four sales of bred Poland Chinas. Arrange matters so that you can attend all four sales. Start with the Grant County Association sale which takes place at Lancaster, Tuesday, February 13th. They have a wonderful offering. The day following, February 14th, E. W. Hendricks, sells at Hazel Green, and you should see this offering and the two great boars used in this herd, Black Jumbo and Model Major 2d. J. C. Hendricks also sells at Hazel Green, the day after E. W. and it is useless to say much about Joe's stuff, for he has them as good as grows. Chris Kartman, closes the week at Cassville, Wis., and it will be a "grand finale" for he is selling some great sows and gilts bred to that big spring boar, Timm Wonder, and the second-prize boar at the Wisconsin State Fair. Kartman will have a good offering for you to bid on. Good railroad connections from one sale to the next. T. P. Shreve will represent The Wisconsin Farmer at each of these sales and will handle buying orders for those that cannot attend. Letters or telegrams should be sent to him in care of the men making the sale.—Adv.

Breeding Short-horns Forty-six Years.

THE Kiser Bros., Short-horn herd of Oregon, Wis., is one of the oldest in the state of Wisconsin. Registered cattle have been bred and raised by the above brothers for 46 years without a break. They have seen other herds come and go, have seen men make money and lose money with Short-horns, but the Kiser Brothers have stayed by the Short-horn cow and she has made money for them. They have sold cattle from Virginia to Canada and from coast to coast, and the fact that they have been in business 46 years is indicative of their honesty and integrity. Just at this time they have a few bulls for sale, from six months to a year old. They are sired by Oakland Lad he by Royal George by Hopeful Knight and right here we want to say that they have an excellent breeding bull in Oakland's Lad. His calves are of a uniform type, rich roans in color with even top and bottom lines, masculine heads on the bull calves, and exceptionally good in the hind quarters. Several of the good bulls are out of Young Mary dams with two top crosses of Whitehall Sultan and Ceremonious Archer. Away back in 1870 the Kisers paid $1,000 each for four cows. These cows made good for them and some of the present herd trace back to these $1,000 cows. Some of the good young bulls are of this family. We are glad to recommend the Kiser cattle, for we know that they will sell you bulls that will give satisfaction. Write them for descriptions and mention The Wisconsin Farmer. See page 28.—Adv.

An Economical Incubator.

TWENTY big "success" points are listed by the Des Moines Incubator Co., 380 2d St., Des Moines, Iowa, makers of the Successful incubators and brooders. They have been manufacturing incubators for 22 years with results that justify the name of their product. The Successful is offered to farmers this year at a remarkably low price. If you are thinking of buying a new incubator write the company for their interesting new catalog of Successful incubators and brooders. They will send it free to readers of this paper. When writing be sure to mention this paper.—Adv.

Fox & Gallagher Short-horns.

FOX & GALLAGHER, of Oregon, Wis., have one of the good Short-horn herds of Wisconsin and just at this time they have for sale a number of bulls ready for service. At the present there is great demand for bulls of straight Scotch breeding and the above firm has them for sale. They are rich in breeding and individually good enough to head the best registered herd of Short-horn cows. Write the above firm, they have Short-horns that please. Don't fail to mention this publication. —Adv.

Chester White Bargains.

WM. F. BUTTS, Evansville, Wis., has a good herd of Chester White swine, headed by one of the best boars in the state. His sow herd is big, individually, with good backs. At this time he has some fall pigs for sale, either sex, farrowed in March. He will make you prices for pairs or trios. Also has gilts bred for March and April farrow, not loaded with fat, but in the right condition for future usefulness. If you are interested in Chesters this herd will appeal to you. Write Mr. Butts for further information. See page 29.—Adv.

Short-horns at Madison, February 15th.

THE Short-horn men will have their inning at Madison, Thursday, February 15th, when the members of the Wisconsin Short-horn Breeders' Association will sell 52 head of bulls and females. The catalog is very descriptive and you should have one by this time. If you have not received any write at once to J. L. Tormey, Secretary College of Agriculture, Madison, Wis. There will be some 13 bulls in the sale. Two of this number have been used and are tried sires with a good reputation back of them. The balance of the bull offering are individuals of serviceable age and by the way several show prospects have been consigned. The female end of the sale is above the ordinary. Cows and heifers well along in calf to the service of good bulls. Individually they are good and you will have a chance to get Scotch cattle or Scotch-topped females. By noticing the advertisement that appears on page 28 of this issue you can note the men that have consigned to this sale. These men realize that this will be the opportune place to advertise their herds so naturally they are consigning some of the best things they have. You will not be disappointed if you attend. Sale will take place in the live stock pavilion at the University farm. When writing for catalog don't fail to mention The Wisconsin Farmer. See page 28.—Adv.

Intercounty Holstein Breeders' Association.

EVERY breeder of Holstein cattle is desirous of owning the best animals he can afford. Now, if he can not afford to buy world's record animals, the next best thing is to buy animals of the same bloom lines as the ones that have produced world's records. In this way he stands the best possible chance to get animals of heavy production ability, and many a world's record has been made by animals from unknown herds. In Dodge and Jefferson counties you can today buy at reasonable prices animals that are rich in the blood of former world's record cows. If you are in the market for a herd sire or a few females write to Francis Darcey, secretary of the Intercounty Holstein Breeders' Association, who will be glad to put you in touch with the breeders who are most liable to have the kind of animals which you want. See page 30.—Adv.

Foxhall Short-horns.

THE Foxhall herd of Short-horns is one that is making Short-horn history for Wisconsin. By careful breeding of well selected animals and by good care they have developed a herd good enough to show at the Wisconsin State Fair and the International. The farm is one of the best in southern Wisconsin, and recently it has been added to very materially by the purchase of 225 acres adjoining. In a short time Iowa and Illinois breeders will have a formidable rival in this herd. The offering of young bulls this year is better if possible than ever before. For particulars in regard to breeding, etc., of the bulls offered for sale write to the above address.—Adv.

The Smiley Poland China Offering.

WM. SMILEY & SONS will hold their annual sale of Poland China bred sows at their farm near Albany, Wis., on Washington's Birthday—February 22d. We have often said that the Smileys have a fine reputation throughout the state as breeders. Their Poland Chinas have made good in most instances. Big averages have never been obtained at the Smiley sales, but no breeder of the state ever sold more hog for the money. The sale this year will be made up of tried sows, fall yearlings and spring gilts. Several in the sale are sired by Major Hadley, the great breeding boar that has done so much good in this herd. We have seen some wonderful sows sired by him, and he is also the sire of Major Model 2d, the great boar in the Hendricks herd. Some are sired by Major Miller, sired by Major Hadley, out of a Big Orange dam. Monarch is one of the real good boars doing service on this farm at the present time. He is big and smooth, of the very best blood lines and some of the good gilts in the sale are sired by this boar. The big noise will be gilts and sows bred to a great son of the noted Goldengate King, the dam being Lady Big Bone 2d. This is very popular breeding and Wisconsin breeders can well afford to get some of it. Wisconsin Jumbo 2d is in our estimation the best boar on the Smiley farm—he is big, very smooth, has a wonderful back, good on his feet, a nice neat head and he is siring a nice lot of gilts. Would advise that you get a good sow or gilt sired by this good big-type boar. Just at this time you must get a catalog, and to get same you must write for one, for catalogs will be sent only to those that request one. As you all know a breeders' mailing list gets very stale unless same is checked up every few years and this is the only way to get a line on the "live" breeders. Be sure to get the catalog, it is interesting and instructive. A good way to spend Washington's birthday—attend the Smiley sale. If you can't attend in person, send buying instructions to T. P. Shreve. Please mention The Wisconsin Farmer when writing for catalog. See page 28.—Adv.

Salzer's Seeds.

THE farmer and gardener is beginning to think of his seeds for the spring planting. Much attention is necessary to select the seeds best adapted to local conditions and needs if the best yield is to be expected. John A. Salzer Seed Co., Box 123, La Crosse, Wis., handles a wide variety of sturdy, prolific, northern-grown seeds from which the farmer can certainly select some which are suited to his needs. Besides the field seeds an excellent line of vegetable and flower seeds is handled by the Salzer Company. Read their advertisement on page 16 and write to the company for a copy of their big new catalog, which is given free to readers of this paper on request. Just mention that you read the advertisement in this paper.—Adv.

Wenhams' Herd of Milking Short-horns.

IF YOU were to ask us where to find a herd of pure Bates milking Short-horns we would unhesitatingly direct you to the farm of Geo. Wenham & Sons, Ft Atkinson, Wis. This herd has for years been bred for milk production, using bulls from cows of large milk production and high percentage of butter fat. The most prominent blood lines in this herd are Wild Eyes Duke and Clay Buttercup. These two families have been noted both in England and in America for their milk and butter producing qualities. Breeders of pure Bates Short-horns or breeders who wish to increase the milking ability of their Scotch-topped cattle will do well to visit this herd and buy a herd header. See page 28.—Adv.

Sir Bess Ormsby Mercedes.

THE above is the name of the young bull that is being used in the Olathe Holstein herd, owned by the Silver Spring Farm Co., Eau Claire, Wis. His sire is Sir Pietertje Ormsby Mercedes 37th whose dam and sire's dam have an average record of 36.89 pounds in seven days and 902.01 in 305 days. The dam is Daisy Queen De Kol, the dam of one son with four A. R. O. daughters, and two daughters with three A. R. O. daughters. This is a nicely marked bull and an excellent individual in every respect. At the present time, this firm offers heifer calves out of large producing dams. Notice the advertisement that appears on page 30 of this issue.—Adv.

Good Producing Short-horns.

THE Short-horn cows and heifers that Williams Bros., Bangor, Wis., have for sale are right in every way. They are young, have been well-cared for, have recently freshened or will freshen soon and they can be bought worth the money. Get busy, the boys are on the square. See page 28.—Adv.

That Short-horn Sale at Madison.

WE have just seen the catalog containing the breeding of the Short-horn cows and heifers, as well as bulls that are to be sold at Madison, February 15th. You should have one of these catalogs and get in touch with the class of cattle that will be sold at that time. Some fine cows will be sold,

NEXT WEEK'S SALE PROGRAM

The Wisconsin Farmer "Too Good" An Advertising Medium, Says Breeder.

"YOUR paper is too good to advertise in. Am all sold out of Short-horns. Have only breeding herd left and young calves. Wish you would discontinue my advertisement at this time until next summer. I did not expect to be sold out so soon, but The Wisconsin Farmer did the business. In less than six months sold 44 head of bulls and heifers and every mail brings from one to three letters daily and no stock left now. Henry Wehmhoff, Burlington, Wis."

Guaranteed Weekly Circulation, 90,000.

GANT'S FARM DUROCS

BRED SOW SALE

Delavan, Wis. Thurs., Feb. 15, '17

Come and take your pick from 40 head bred to

PATHFINDER (the mighty.)
KING DEFENDER (Wis. Grand Champion.)
ILLUSTRIOUS PROFESSOR (by Illustrator.)
GANT'S FARM CHERRY CHIEF (by Cherry Chief.)

GILTS out of dams by Orion Chief, Fancy Col., Good Enuff Again, Lee's Defender and The Professor. We promise you an outstanding lot of sows and gilts. Catalogs now ready. Col. Lloyd Seeley, auctioneer. Send mail bids to T. P. Shreve, in my care.

GANT'S FARM **DELAVAN, WIS.**

heifers that will do to show and bulls good enough to head the best herds. Write at once to J. L. Tormey, Madison, Wis., and get one of the catalogs—it's very interesting. Please mention The Wisconsin Farmer.—Adv.

Herr Bros. & Reynolds' Consignment.

ONE of the consignors to the Short-horn sale to be held at Madison, February 15th is the farm of Herr Bros. & Reynolds, of Lodi. In regard to the cattle which they are listing in the Madison sale, there are two nice young cows and well along in calf. These should make good brood cows for anyone in the market for well-bred young cows. The heifer calf is a short age junior and a show heifer in almost any company. The older heifer is a very attractive heifer sired by White Rock, and has recently been bred to Master Ruby. The bull is of the Village Girl family and is sired by Master Ruby. He is a straight good calf in not too high condition. He is a sure breeder.—Adv.

Special Sheep Offering.

THE Valley View Stock Farm, owned by Geo. A. Phillipi, at Bear Creek, Wis., is making a special offering in bred ewes, that is of interest to readers of The Wisconsin Farmer. They are a choice lot of ewes, as Mr. Phillipi is very careful in his selection of breeding stock, as is shown by the winnings of his flocks at the leading fairs in Wisconsin. He is now offering 50 high-class, registered ewes of Delaine, Cheviot, Southdown, Rambouillet and Oxford breeding. These are all bred to prize-winning dams. Mr. Phillipi is also offering 25 head of Angora does, bred to a winner at the Panama Exposition. For further information write to the above address. See page 31.—Adv.

Kimball's Holstein Bull Offering.

THE two young bulls advertised for sale on page 30 by L. A. Kimball, Lake Geneva, Wis., should be investigated by our readers who are in the market for a herd sire. These are both sired by a 31-pound bull. One is out of a 16-pound two year old whose dam made 23.21 pounds butter in seven days. The other is out of a 21.75-pound cow. They are both well grown for their age. One of good, straight, level type and of well-known and proven lines of breeding. For further information in regard to these animals write to the above address.—Adv.

Maurers' Short-horns.

THOSE who have seen the Short-horn herd of Richard Maurer & Sons, Fox Lake, Wis., will agree with us that it is a good one. That the proprietors are discriminating judges of Short-horn type is evidenced by the cows and their offspring that comprise the herd. Animals of proven blood lines and of the best type have been used for years and the result is, breeding stock that are good enough to go into any herd. There is now a surplus of some 20 head of males and females that can be spared and it will be to our readers' advantage to look them over. See their advertisement on page 28.—Adv.

A Tractor Plow.

FARMERS who strive to keep pace with the modern improvements in farming are abandoning the old horse plow for the new tractor plow, such as the Janesville tractor plow, manufactured by the Janesville Machine Co., 41 Center St., Janesville, Wis. This plow is suitable for any soil and can be used behind any tractor. It is the result of the almost sixty years' experience of the Janesville Company in making farm machinery. Valuable information about the Janesville Tractor may be had by writing to the company for a copy of the new book, "Janesville Farm Implements," which will be sent free to readers of this paper on request. Be sure to mention this paper.—Adv.

Red Polls For Sale.

GOOD Red Polls are in demand and Byron R. Curran, Taylor, Wis, has a good herd. At this time he has eight young bulls for sale. They range in age from calves to bulls of serviceable age and are sired by an International winner, Liza Lad 23108. The dam of this herd bull has an A. R. record of 515 pounds of fat. You get individuality and breeding when you buy Red Polls from Curran. Price $75 to $150. A limited number of females will be sold. Get your order in early. Please mention The Wisconsin Farmer when writing. See page 31.—Adv.

A Good Guernsey Bull.

A GOOD Guernsey bull is the only kind that any breeder can afford to use. When you can get as good a one as the imported bull advertised for sale on page 31 by O. R. Frauenheim, Random Lake, Wis., no breeder has any excuse for using a poor one. This bull is from the imported cow, Blanche Flower of Sarnia. She is a daughter of Raymond 60th, that is reported as having more daughters on A. R. test than any other bull of the breed. Send for an extended pedigree and further description of this animal.—Adv.

A Tractor That Does Things.

THE "Big Bull" tractor, made by the Bull Tractor Company, 2756 University Ave, S. E. Minneapolis, Minn., has made some remarkably good records in accomplishing things, earning its title "The Bull with the Pull." Any reader of The Wisconsin Farmer who is interested in the work of the Bull tractor should write the company for literature describing the Bull and telling what it has done for other farmers. They will send free on request a copy of their new book on subsoiling, or a three-months' subscription to the monthly Tractor Bulletin. State which you prefer, and tell them you saw their advertisement in The Wisconsin Farmer.—Adv.

Dane's Hampshires.

THE Dane Stock Farm, Oshkosh, Wis., is continually receiving letters of thanks from buyers to whom they have shipped breeding stock. We are here to say that "there's a reason," for they raise good Hampshires on that farm They are big and blocky with good bone, good heads and right all the way through. The herd sire, Dane's Model, is one of the best we ever saw, and we do not hesitate to recommend this herd to our readers. See advertisement on page 30, as it offers some special attractions.—Adv.

Barn Plans Free.

FARMERS who contemplate building new barns this season will be interested in seeing the book of practical barn plans that has just been published by the Hemlock Manufacturers, Dept. 300, F. R. A. Building, Oshkosh, Wis. These plans are designed to meet a variety of needs. The book will be sent free to any reader of The Wisconsin Farmer who will write for it. Just tell the company that you are a reader of The Wisconsin Farmer and that you would like to have a copy of "Old Faithful" book of barn plans No. 3, and give the name of your local lumber dealer.—Adv.

Tamarack Farm Guernseys.

TWO right good yearling Guernsey bulls are advertised for sale on page 31 by the Tamarack Farms, Dousman, Wis. The youngsters were sired by Dora's Boy of Sunny Valley 24470, whose dam made over 700 pounds of butter in a year. One of these bulls is out of the imported cow, Queen of the Lillies 28547. They are both well grown and of good, straight type. Send for their pedigrees and for further description.—Adv.

The Austin Angus Herd.

DON'T overlook the good herd of Aberdeen Angus cattle owned by R. A. Austin & Son, Lancaster, Wis. We consider this one of the best herds in the Northwest. Individually the herd has few superiors and they represent the most noted families of the breed. The young bulls they have for sale are of serviceable age and are in nice condition for immediate use. Write them for prices and description.—Adv.

Underwood Red Polls.

ONE of the good Red Poll herds in this state is owned by L. C. Underwood, Avoca, Wis., and the young bulls that he has for sale are desirable in every respect. One of the best Red

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS **LAWLER, CHICKASAW CO., IOWA**

We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

4 Stallions PERCHERONS 2 Mares

WE are offering 6 very high-class Percheron stallions and mares; 1 two-year-old and one yearling stallion out of **Diana 53532** by Phil Sheridan and 1 yearling stallion and a 2 and 3 year old mare out of Karel 33640, a double bred **Baccarat** mare. The two-year-old stallion sired by Imp. Haricot 74108 is particularly good. Send for prices and description.

JOHN KLOEHN **FOREST JUNCTION, WISCONSIN**

PERCHERON STALLION FOR SALE

First-prize three year old at North Wisconsin State Fair, sired by Royalist, grand champion at the Wisconsin State Fair. Dark gray, weight 1,900 pounds. A heavy-boned, drafty fellow. Also one black five year old, weight 1,900 pounds, and second-prize aged stallion at North Wisconsin State Fair. These horses are in the harness every day.

L. P. MARTINY, Chippewa Falls, Wis.

SMILEY & SONS' ANNUAL

POLAND CHINA BRED SOW SALE

AT THE FARM NEAR

Albany, Wis., Thurs., Feb. 22

50 HEAD--5 Tried Sows, 5 Fall Yearlings, 40 Gilts

Sired by **Major Hadley, Major Miller, Monarch** (some boar), **Big Bone Jumbo, Goldengate King** and others of note.

Bred to **Monarch, Major Miller, Smiley's King, Wisconsin Jumbo 2d.**

We have never made exorbitant averages but the sows that we have sold have made good for the buyers and we have satisfied customers. We sell in ordinary flesh and they farrow and raise large litters—don't think the offering is poor, for they are in proper breeding condition. **Sired by and bred to excellent boars.** Blood that old customers can use.

NOTICE: Catalogs sent only on request to those that write for same—do this at once and mention The Wisconsin Farmer. Auctioneer, W. B. Duncan. Send mail bids to T. P. Shreve, field man for The Wisconsin Farmer.

Wm. Smiley & Sons, Albany, Wis.

Choice Short-horns from Wisconsin's leading herds

Will Be Shown and Sold

THURSDAY, FEBRUARY 15, 1917

In University Stock Pavilion

at Madison, Wisconsin

52 HEAD--39 Females, 13 Bulls--52 HEAD

Consignments from the following herds:

Anoka Farms, Waukesha
G. D. Arnold, Galesville
H. B. Drake & Son, Beaver Dam
Griswold Bros., Livingston
Herr Bros. & Reynolds, Lodi
E. E. Jones, Rockland

TOLD IN THE HILLS

(Continued from page 24.)

skin shirt, the knife in his belt, the rifle swung at his back.

There was something impressively ghastly in those two figures—the live one with the stubbornness of fate, and the stolidity, sitting there, with across his thighs the blanketed, shapeless thing that had held a life; and even the husk seemed a little more horrible with its face hidden than when revealed more frankly; there was something so weirdly suggestive in the motionless outlines.

"No, I don't want that," he said, as the man who read the message was about to hand it back to him; "it belongs to the command, and I may get a dose of cold lead before I could deliver it."

Then he glanced about, signaling Stuart by a motion of his head.

"There's a lady across in the valley there that I treated pretty badly last night," he said, in a tone so natural that all near could hear him, and more than one head was raised in angry question. "She was just good enough to ride over from the ranch to bring a letter to me—hearing I was locked up for a horse thief, and couldn't go after it. Well, as I tell you, I was just mean enough to treat her pretty bad—flung her on the floor when she tried to stop me, and then nabbed the beast she rode to camp on—happened to be my own; but maybe she won't feel so bad if you just tell her what the nag was used for; and maybe that will show her I didn't take the trail for fun."

"That" was one of the gloves he had worn from his hands with his night's work, and there were stains on it darker than those made with earth.

"I'll tell her;" and then an impulsive honesty of feeling made him add: "You need never fear her judgment of you, Jack."

The two looked a moment in each other's eyes, and the older man spoke.

"I've been hard on you," he said deliberately, "mighty hard; all at once I've seen it, and all the time you've been thinking a heap better of me than I deserved. I know it now, but it's about over. I won't stand in your way much longer; wait till I come back—"

"You are coming back? and where are you going?" The questions, a tone louder than they had used, were heard by the others around. Genesee noted the listening look on the faces, and his words were answers to them as much as to the questioner.

(To be continued.)

HOLSTEIN BULL CALVES $100 and Up

Write PABST STOCK FARM, Dept. 30, Oconomowoc, Wis.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.
BAIRD BROS. - - - - **WAUKESHA, WISCONSIN**

HOLSTEIN BULL FOR SALE
Ready For Service

BORN January 1, 1916, sired by a proven son of King Segis De Kol Korndyke, sire of the first 40-lb. heifer and brother to the sire of the $50,000 bull and the $35,000 bull. Records of his dam and two nearest dams of his sire average butter, 7 days, 29.44 pounds. He is a good individual, a trifle more black than white. Priced right for immediat e sale. Address
PINEHURST DAIRY SHEBOYGAN FALLS, WISCONSIN

Purebred Registered

HOLSTEIN CATTLE

The undeniable facts that the Holstein-Friesian Association of America is the largest and most prosperous dairy cattle association in America, that its membership is over 7,000 more than the combined memberships of the other dairy cattle associations, and that it increased its membership by 1,260 during the fiscal year ending April 30, 1916, are primarily a fitting testimonial to the superior merits of the purebred Holstein-Friesian cow, that yields more milk for a day, for a year, for a lifetime and for profit than any other cow. There is big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.
The Holstein-Friesian Association of America

VALLEY VIEW STOCK FARM
SPECIAL OFFERING

ON account of recent changes in our farm management I have decided to offer for sale 50 head of high-class, pure-bred ewes not heretofore offered, in the following breeds: Delaine, Cheviot, Southdown, Rambouillet and Oxford. These ewes are all bred to high-class imported and prize-winning rams. I am also offering 25 head of pure-bred Angora does bred to winner at the Panama Exposition.
Geo. A. Philippi, R. 40, Bear Creek, Wis.

Columbus, N. M., Feb. 23, 1916.
Stock Food Co., Milwaukee, Wis.
men: I herewith enclose money the trial I ordered some time ... of your famous Stock Food. I have used all kinds of stock tonic but yours surely caps them all. My horses and cows are doing fine and don't require near the feed. I have been dividing with my neighbors and they all say there is nothing like it. W. I. Hobbs.

Dafoe, Mich., March 14, 1916.
Wilbur Stock Food Co.
Dear Sirs: I have received your stock tonic two months ago today and have fed it as directed and certainly find it as recommended, even better. One of my horses and cows always run down in winter so it took nearly all summer to shed their old hair, but this winter since I fed your tonic they are shedding their hair now and are in fine condition and my poultry has done better this winter than ever. The neighbors are all surprised to see my stock, especially horses. Their hair is so sleek and glossy. I will not be without your tonic if I can get it anywhere. I recommended to all my neighbors and friends what your tonic has done for my stock.
Yours truly,
Onesime Dion.

Feb. 14, 1916.
To Whom It May Concern:
We have used Wilbur's Stock Tonic in dairy herd and we are thoroughly satisfied with results. We find great increase in flesh, cream and flow of milk. Since we began using it, our cows are doing better on less feed. We think it superior to any other tonic.
Yours very truly,
Bell & Tatum.

Feed Your Cattle 60 Days—At My Risk

AND GET ONE OF THESE ALL STEEL 50 EGG INCUBATORS FREE

This all steel Incubator is a first class hatching machine in every way. It's built of best quality steel with double walls and thoroughly insulated top. It is not a toy in any sense of the word. It is compact, and being steel, is absolutely fire-proof and trouble-proof. It is wonderfully simple, easy to operate, requires very little care and attention—and

We Positively Guarantee

the hatching qualities to be equal to those of any incubator on the market.
WILBUR STOCK FOOD COMPANY

I want every reader of this paper to try my Stock Tonic for two whole months at my risk and to pay for making the trial **I will give away to each one** who sends in the coupon below **one of these guaranteed Incubators—Absolutely Free.** I will send the Incubator at once and also a good trial feeding of

WILBUR'S STOCK TONIC

The greatest of all live stock conditioners. It will send you this Stock Tonic with the **distinct understanding** that it is to be used for **two whole months at my risk**—that if at the end of the two months trial feeding the Stock Tonic has not been entirely satisfactory to you **no charge is to be made.** I simply want you to make a two months free trial of my Stock Tonic with the understanding that **if it does not fatten up your live stock—kill the worms—that if it has not paid you to feed it—no charge is to be made.** Then as a special inducement, to repay you for the trouble in making this test, **I will give you—Absolutely Free—one of these all steel Incubators shown above.**

There Is No Secret About This Tonic

It is composed of twelve separate ingredients—plainly printed on every package. These ingredients are acknowledged by veterinarians everywhere to be the **finest tonics, appetizers, digestive aids and worm expellers** known to medical science. Each one has its special purpose. When all these herbs, roots, etc., are mixed with the regular feed they act directly on the digestive organs of the animal. They **create an appetite, help the animal digest the food** and then **turn the food into good, rich flesh and blood.** They **kill the worms, keep the blood clear and tone up the entire system.** This tonic is not a patent medicine. It merely supplies to an animal **what is lacking** in ordinary feed. It is nature's own remedy for all troubles arising from indigestion, overfeeding, etc. That is why it is absolutely sure to put your animals in such perfect condition that you **will be bound to make more money with everyone of them.** I have made and sold this tonic for over thirty years and over a million of the best stockraisers in America are feeding it every day. I have thousands upon thousands of the finest kind of letters from all parts of the country telling me of the wonderful results from feeding it. You would feed it too—if you only knew that it would make money for you. **That's what I want to prove with this trial feeding.** And as a special inducement, just to get you to make this trial—**at my risk—I am going to send you one of these Incubators Absolutely Free.**

It Incubator is Yours—Free

It never costs you a cent. It's yours—**forever**—to keep and use every day—**whether you ever pay for the trial feeding of Tonic or not.** It's a positively guaranteed machine—you will find it one of the neatest, cleanest, handiest and most reliable hatching machines that you ever saw. We know that you will be pleased with it, and remember—it's Free

This is a sincere, straight forward effort to get you to use my tonic. **I am taking all the risk.** I could not print this offer in this paper unless I made good every promise. In addition, I refer you to any bank or commercial agency anywhere. I mean every word I say and you are taking no risk in accepting my offer and sending for this trial feeding with the Incubator free.

SEND NO MONEY. Just find out by actual test on your own stock that **my tonic will make money for you.** I have an Incubator all ready for you if you send that coupon right away. **You can't possibly lose anything**—you have everything to gain. **Isn't it worth a postage stamp? Do it now—at my risk—fill out and mail the coupon to me at once.**

THE WISCONSIN FARMER

VOL. XLVI. NO. 7. THURSDAY, FEBRUARY 15, 1917. WHOLE NO. 1829

More Hogs For Our Dairy Farms

GEORGE KELLY,

An Iowa county breeder and exhibitor of Berkshire hogs.

L. F. ATWATER,

La Crosse county Duroc breeder who was a leader Swine Week.

THIS was the slogan for Farmers' Week. Wisconsin has so many dairy farms that it would be difficult to greatly increase the number of swine unless these swine might find a place on the same farms where the cows are kept. So the real problem of extending the swine business in the state seems to be in interesting the dairy farmer to raise more hogs. If this cannot be done there would necessarily have to be a lessening of dairy cattle to increase the number of hogs and we found no one attending the Farmers' Week conferences who suggested for a minute that we dispose of a few hundred thousand dairy cattle and put in swine instead. Such is far from the spirit of the greater swine movement in Wisconsin.

That too few farmers have realized the close relationship between the hog and the dairy cow when it comes to farm profits is a sad condition of affairs. The best breeders have been quicker to see the desirability of a cow-hog combination. So frequently we see in the advertising columns a Wisconsin farmer who is raising Guernseys and Berkshires, or Holsteins and Poland Chinas, or milking Shorthorns and Durocs, or some other good combination which could be worked out of these and other desirable breeds of dairy cattle and swine. It is unnecessary to go into a long discussion at this time as to the feeding economies which may be effected on a farm which raises dairy cattle and feeds hogs. The value of skim milk as a food for young pigs is too well known. The chief difficulty seems to be that we have not yet stimulated the interest of our dairymen to the extent that they will get busy in the hog game. The average dairyman knows that it will pay him, under ordinary circumstances, to have brood sows, a well-bred boar, and that when the litters come he has about his best chance at a quick cash crop. The hog has been called the "mortgage lifter," and it is a truthful name, especially on the dairy farm, where the cream check keeps up business on a substantial basis the year around, and the pig money comes in extra to meet such special obligations as interest, taxes and mortgages.

Wisconsin fed pork is in demand at the Milwaukee, Chicago and South St. Paul markets. We were told Farmers' Week that there is practically no preference given to breeds at the market. There is a decided preference for size and condition, but whether a hog is white, or red, or black, or striped, seems to make little difference to the buyer if he meets the other market standards. The 200 to 250-pound pig, free from disease, is best adapted to packing for the better grades of meat. The smaller pig is in demand for export trade, especially to Liverpool. More attention is being paid each year to the health of hogs which arrive at the markets. While the percentage of tuberculosis in hogs is not high, it is higher than it should be, and disease-free hogs are bound to gain a preference. One of the buyers addressing the farmers at the swine week program in Madison last week was asked to state the probable causes of tuberculosis in hogs. He said that dust is one of the most frequent causes. Dust is a great carrier of germs. It is just as likely to carry tuberculosis into the lungs of a hog as it is into the lungs of a human—in fact, more so, as the hog will make no effort to protect himself in the dirtiest kind of dust. So pens and feeding floors should be kept free from dust for the protection of the hogs and for the protection of all other live stock on the farm.

With hogs selling at eleven to twelve cents a pound on the Chicago market, as they did last week, the readers of this paper do not need to be told that there is a profit in animals like these that will use up a large part of the cheap feed on a dairy farm. But all hogs do not sell at such prices. If it pays to raise hogs at all it pays to raise good hogs—hogs true to some

(Concluded on page 26.)

R. L. HILL,

Field secretary of the National Duroc Jersey Association.

F. F. MOORE,

Secretary of the Chester White Record Association.

J. F. DILEY,

Poland China breeder, who has been director of National Assn.

JAMES FISHER,

Crawford county Chester White breeder who spoke Farmers' Week.

JAMES DILLON,

Buffalo county men, swine superintendent, Wisconsin State Fair.

G. B. VAN NORMAN,

Forty years' hog experience in Sauk and Waukesha counties.

M. MADSON,

Well-known Dane county breeder of Poland China hogs.

M. H. O'KEEFE,

For years an efficient officer in Wisconsin Duroc Association.

Anthony Fence

Under stress of action each wire within a considerable radius is brought into play, affording, to an extraordinary degree, the resistance of a flexible wall of steel—due to the perfectly balanced woven fabric, in which each wire is drawn under equal tension with machinery of special design. Thoroughly galvanized.

Pick It Up and Walk Off

Did you ever see any other 8 H. P. Engine two men could carry? Cushman engines are the lightest weight farm engines in the world—easy to move around and put to work anywhere. No longer necessary to put up with old-style, back-breaking, heavy weight engines, with their violent explosions and their fast and slow speeds. The Cushman weighs only about one-fifth as much, per horsepower, but with its modern design, accurate balance and Throttle Governor, it runs much more steadily and quietly.

Cushman Light Weight Engines

40 to 60 lbs. Per Horsepower

The 4 H. P. weighs only 190 lbs. Mounted on iron truck, as shown below, it may be pulled around anywhere. Besides doing all other work, it may be attached to moving machines in the field, such as grain and corn binders, potato diggers, etc., driving the operating part and leaving the horses nothing to do but pull the machine out of gear. 8 H. P 2-cyl. weighs only 320 pounds. Sizes up to 20 H. P. Not cheap engines, but cheap in the long run. Book free.

CUSHMAN MOTOR WORKS

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

Position of Piston Ring.

I am overhauling my Ford motor, and I intend to put one "Never Leak" ring on each piston. Kindly advise in which groove I should put the new ring so as to get best results.

Answer.—If you are troubled with oil working up over the rings and causing carbon trouble, put the new ring in the bottom groove. Otherwise we would say to place the ring in the top groove. It should make very little difference. It would be better to use all new rings.

Winding Dynamos.

I wish to make a dynamo from an old magneto armature, one and eleven-sixteenths of an inch in diameter and two and eleven-sixteenths of an inch long. It is wound with No. 20 copper wire, and has twelve slots. What size wire should I use on the field coils? Should the field coils be square or round; and how large should they be?

Answer.—Use No. 32 single cotton covered copper-covered wire for the field coils. Make the cores rectangular, about one-half inch thick and one and one-fourth inches wide. They sho ld be about two inches long.

Diameter of Steam Cylinder.

Please tell me how large a steam cylinder would be required to propel a bicycle with rider. Please give diagram.

Answer.—A cylinder two inches diameter with a four-inch stroke and a boiler pressure of 200 pounds per square inch would give between three and four horse power when running at 500 R. P. M. This should be sufficient. We know of no such machine on the market and, therefore, we are not publishing a sketch. However, the idea might be worked out successfully. The boiler should be made of copper tubing and designed to operate at a pressure of 250 pounds. The general principles of the control of the steam should be the same as for steam automobiles.

Making Gunpowder.

Will you please publish how to make gunpowder?

Answer.—Making gunpowder is a dangerous process and should not be attempted except on a very small scale and with a great deal of caution. Gunpowder is made from a mixture of sulphur, ten parts,; charcoal, fifteen parts; and potassium nitrate, seventy-five parts, the above proportion being by weight. The above ingredients are made into a paste with water and then ground very fine, after which the paste is pressed into cakes and dried. When thoroughly dry the cakes are broken up into grains of the required size and are given a coat of graphite by shaking them in a can containing graphite. No two pieces of metal or material that can cause a spark can be used to grind up the cakes of powder after drying, as the slightest spark may cause an explosion. Explosions have even occurred from the static electricity in the air, the spark coming from a belt or some other object.

Removing Grease From a Grindstone.

Please tell me how to take grease off the face of a grindstone. It has been there some time.

Answer.—The wheel can be washed with gasoline, ammonia or lye water. It can also be scraped off, using the outfit shown in the figure. This outfit is commonly used for truing up grindstones that have worn out of round. A piece of angle iron or strap iron A is bolted to the frame of the stand. A

piece of three-fourths-inch gas pipe P has a collar C fastened to it, either by a set screw or a pin. As the wheel is turned around, the end of the pipe is held against the face of the wheel. The pipe is slowly turned and moved across the face of the grindstone. The collar C bears against the angle iron and serves as a guide.

Replacing Electrolyte.

I have a Western Electric thirty-two-volt lighting plant. It has been in use four years. The plates are all in good condition. When the battery is fully charged, the electrolyte should test 1.205; but now it tests only 1.165. There has never been anything put into the cells but pure water to replace the evaporation. The battery still gives a a good light, but it takes longer to charge it than it used to. What should be done?

Answer.—Your battery needs new electrolyte. Make the electrolyte from pure water and pure sulphuric acid, using enough acid in the water to bring the specific gravity up to 1.350. Pour the acid into the water—not the water into the acid—and stir with a glass rod while pouring. Remove the old electrolyte from the cells after fully charging the battery, taking great care not to disturb the plates or injure them in any way. Wash the sediment out of the cells and off the plates with pure water. Then pour in the new electrolyte and charge the battery at once. Do not allow the plates to dry while changing the electrolyte. If, after charging, the electrolyte tests too high, remove some of it and replace it with pure water.

The Wisconsin Farmer

THURSDAY, FEBRUARY 15, 1917.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

A FINE EXAMPLE OF COURAGE AND CHEERFULNESS.

I SOMETIMES think that in many cases the lack of one or more of the five senses is not all loss. It seems as though nature seeks to compensate for what is missing in one respect by increasing the keeness of those which remain. Some of the brightest people I have ever known have lacked sight, hearing or speech. Deafness, blindness and lack of speech, unfortunate as they are, enable one to concentrate the more closely on those things which he can enjoy, with the result that one so afflicted oftentimes acquires a finer appreciation of the best things of life than those of us whose minds are distracted by the things crowding for attention upon our five senses. The very fact that one must overcome obstacles which would seem insurmountable to the normal person, makes them appreciate what they get all the more keenly, just as we always enjoy most those things for which we struggle hardest.

When to interest in and familiarity with the world's great events is added a cheerfulness and buoyancy of spirit, which recognizes no discouragements and makes the best of things as they are, the combination is irresistible, affording an example that is calculated to make the rest of us feel ashamed and almost envious of the unfortunate ones.

Helen Keller is the best-known example of the heights which one may reach, though deaf, dumb and blind. Just the other day I received a letter from one of my Wisconsin Farmer readers which portrayed the same unconquerable spirit. It almost brought tears to my eyes—not because I felt sorry for the writer so much as because its simple story of courage, light-heartedness and peace of mind and soul made me some way feel unworthy of all the gifts nature granted me. It reads as follows:

North Branch, Minnesota, January 27, 1917. Dear Mr. Pierce: Just a few lines to tell you how much I enjoy your fine paper, The Wisconsin Farmer. I always look first for your weekly talk and then for the story. When I tell you I have always been entirely deaf and understand only by lip movements you will understand why I am so fond of a good, clean story. My books, flowers, and fancy work are my dearest friends. I do not take your paper myself, but my son saves it for "mother to read." I am the wife of a Swedish farmer and have had no schooling. In my whole life I was at school but three weeks, having to leave on account of being stricken with total deafness. We live on a 160-acre farm and have had a good year. My husband is going to begin this year right by selling and butchering all of his scrub hogs, and the other day he bought two full blooded Duroc Jersey sows. I have been promised one sow pig out of the coming litter and, as my husband says, may turn out to be a "swine breeder of note." I had to laugh when I read the letter written in reply to the woman whose husband had seventeen head of horses but she had to walk seven miles to see her neighbors. I fully agree with the writer of the letter. If I had a husband so close and small as that I would catch a horse myself and if he said too much I would just go and make a visit until he made up his mind to be half a man, at least. I honestly think that half the husbands are just what a wife helps to make them. I also think that the right kind of a man has more love and respect for the woman who is not afraid to assert her independence. I don't mean that she is to be "boss." That word just stirs up all my "Irish" blood. I am of the opinion that if women would only talk things over when they are first married and have a plan to live by and then stick to it, there would be less domestic trouble. I also think the man has as much right to the family pocketbook as the wife, and as for myself, I am never afraid to ask for as many dollars as I need. With very best wishes for a happy and most prosperous year, I am, very sincerely yours,

MRS. C. E. OBERG.

When you read that letter, my friends, with its cheery philosophy of life, its courageous facing of the duties to be done, its acceptance of what fate has put upon the writer without murmuring or discontent, its atmosphere of interest in and acquaintance with what is going on in the big, rushing, busy world, whose din reaches her brain only indirectly, does it not make you, too, feel both humble and proud? Humble to think of how much more nearly you should live up to your own opportunities, and proud to know that there are such brave, noble women in the world? Does it not make you resolve to play your own part a little more cheerfully, a little more hopefully, a little more bravely, because of the inspiring example of this woman's optimism and pluck? Somehow as I read it I was reminded of those ringing lines of blind Henley, the English poet:

Out of the night that covers me,
Black as the pit from pole to pole,
I thank whatever gods may be,
For my unconquerable soul.

In the fell clutch of circumstance,
I have not winced, nor cried aloud;
Under the bludgeonings of chance,
My head is bloody, but unbowed.

From out this vale of wrath and tears,
Looms but the horror of the shade,
And yet the menace of the years
Finds, and shall find me, unafraid.

It matters not how straight the gate,
How charged with punishment the scroll,
I am the master of my fate,
I am the captain of my soul.

My heart goes out to this generous, patient, deaf reader of The Wisconsin Farmer, not so much in sympathy (for, though she might well receive it, she does not need it), but rather in thankfulness and congratulation. I shall try to make The Wisconsin Farmer just a little more interesting, just a little more helpful, just a little bit better in every respect, because I know of the pleasure she takes in it and I want it to be fully worthy such splendid friends.

LINCOLN'S VIEWS ON FARMING.

LINCOLN'S birthday, occurring this week, recalls to my mind the very notable address on agriculture which he delivered before the Wisconsin State Agricultural Society in 1859. I think we may well spend a few minutes considering what Lincoln had to say then and how equally true and pertinent it is today.

When Lincoln came here to Wisconsin to give his views on farming he had not yet reached the fullness of his stature; he was not yet certain of his niche in the hall of fame; but his breadth of mind and his far-seeing vision were evident in what he said here then, as much as in anything he ever said or did. He began his Wisconsin address by paying a tribute to farming interests, which he held to be above all others, saying:

Farmers, as a class, are neither better nor worse than other people, but their interest is the largest interest. It also follows that that interest is most worthy of all to be cherished and cultivated, and if there be inevitable conflict between that interest and any other, the other should yield.

Are not those words as true today as when Lincoln spoke them, almost sixty years ago? Is not their truth even more generally recognized today than then; that it is the farmer whom the nation must consider before taking any great step, whose interest and welfare are paramount to all others?

But Lincoln did not stop with this tribute to the importance of farming. He went on, most practically, to urge increased production, calling on every Wisconsin farmer to make his acres yield to the utmost. That line of thought having been followed to its logical termination, Lincoln then launched upon an argument in favor of the farm hand and the farm tenant striving to get a place of his own, to be satisfied with a small holding and to work it to the very limit. There is no better presentation possible of the situation as it exists today than is found in Lincoln's words of almost sixty years ago. He said:

The ambition for broad acres leads to poor farming, even with men of energy. I scarcely ever knew a mammoth farm to sustain itself, much less to return a profit from the outlay. I have more than once known a man to spend a respectable fortune upon one, fail, and leave it, and then some man of modest aim get a small fraction of the ground and make a good living upon it. Mammoth farms are like tools or weapons which are too heavy to be handled; ere long they are thrown aside at a great loss.

The prudent, penniless beginner in the world labors for wages a while, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This, say its advocates, is free labor—the just and generous and prosperous system, which opens the way for all, gives hope to all, and energy and progress and improvement of conditions to all. If any continue through life in the condition of the hired laborer, it is not the fault of the system, but because of either a dependent nature which prefers it, or improvidence, folly or singular misfortune.

You will hear the agricultural experts of today arguing along precisely the same lines. We have made great progress in some things; we have increased the yield of our Wisconsin acres as Lincoln urged us to do, but the fundamental principles which underly successful farming and the labor problem remain today the same as they were in Lincoln's time. He who succeeds must labor and save; it is the old, old law and there is no getting around it, save in the most exceptional and isolated cases.

Now that we have Lincoln in our mind, because of his birthday this week, I can hardly do better than to quote another tribute of his to farming, also contained in his Wisconsin address, as follows:

This leads to the further reflection that no other human occupation opens so wide a field for the profitable and agreeable combination of labor with cultivated thought as agriculture. I know nothing so pleasant to the mind as the discovery of anything that is at once new and valuable—nothing that so lightens and sweetens toil as the hopeful pursuit of such discovery. And how vast and varied a field is agriculture for such discovery. Every blade of grass is a study; and to produce two where there was but one is both a profit and pleasure. And not grass alone, but soils, seeds and seasons; hedges, ditches and fencing; draining, drouths and irrigation; plowing, hoeing and harrowing; reaping, mowing and threshing; saving crops, pests of crops, diseases of crops and what will prevent or cure them; implements, utensils and machines, their relative merits and how to improve them; hogs, horses and cattle; sheep, goats and poultry; trees, shrubs, fruits, plants and flowers—the thousand things of which these are specimens—each a world of study within itself.

Was ever a better, finer tribute paid to the farmer and his works than Lincoln uttered when he came here to Wisconsin to give our fathers his views on this important subject?

"AMERICA" IN WISCONSIN SCHOOLS.

I AM delighted to find that a large number of the requests for "America," coming to me from readers of The Wisconsin Farmer, are from those who wish to use them in the public schools. This is splendid. If we can rear our little folks with the proper appreciation of their responsibility to our country, of their debt to "our father's God" and to the pioneers who laid the foundations of our government and our prosperity, we shall have little to fear of the future. That is why I always send the slips containing "America" with so much pleasure to all who wish them for school use.

And how they seem to be appreciated! It certainly does my heart good to read some of the letters of thanks which come to me from Wisconsin readers. For instance, a week or two ago I received a request for copies of "America" to be sent to Mrs. Maude Morey, of Sheridan, Wisconsin. I sent them gladly. A few days later the mail brought me a letter from Mrs. Morey and another from her daughter, Leta Morey. I am going to take the liberty to print them, they are so good. The little girl's shall be first:

Dear Mr. Pierce: My little brother and I received the slips of "America," for which we thank you very much. My little brother is almost eight years old and is in the second grade. I am twelve years old and am in the eighth grade. I have hopes of passing the superintendent's examination next May. We belong to school district No. 2, town of Farmington, Waupaca county. Our teacher's name is Miss Clara Patzer. The school has just purchased a new oil stove, so as to have something warm to go with our lunches. With kindest thoughts,

LETA MOREY.

I certainly appreciate that letter; it is one of the best-written I ever received from so young a correspondent. And here is her mother's letter of thanks:

Dear Mr. Pierce: The slips of "America" received, for which I thank you very much. The children, as well as the teacher, were very much pleased with them. I have been waiting for the school children to send their letter of thanks with mine, but as they have not sent them I thought I would not wait longer. Following are the names of the children receiving the songs: Talford and Alice Gunsten; Alice and Rose Durant; Leta and Emery Morey; Robert, Eva, Viletta and Ruth Rieben; Donald and Harold Faulks; Dorothy and Eva Durant; Calvin Hanawalt; Carl Larsen; Irving, Inga and Hjalmer Jensen; Lucile and Harold Shepard; Dorothy Smith; John, Marie and Lizzie Koch; Willie, Marcella, Everett and Effie Winkler; Willie and Floy Anderson; Clarence, Edwin and Harold Snyder. There were far more than enough for the scholars, so I sent two of them to grand nephews, John and Tom Hansen, of Waupaca, and one to a little niece, Helen Morey, of Waupaca. Thanking you again for your kindness to the children, I am, yours for friendship,

MRS. MAUDE MOREY.

It certainly well repays any little effort I was put to, in sending these slips of "America," to receive such good letters as these. And remember, all who ask will receive the song slips, without a cent of expense to them.

While I am on this subject, here is still another school letter, from Dorothy A. Delaney, a teacher, living in the same town as Mrs. Morey, Sheridan, Wisconsin. Miss Delaney writes:

Dear Mr. Pierce: Your offer was just brought to my desk. If you still have the extra copies of "America" to send out, I would be glad to get them for community singing during the National Week of Song. We will appreciate this very much.

Patriotic public-spiritedness promises to be very high in and around Sheridan. I hope all will join in the words of the grand, old hymn with unaccustomed vigor and thankfulness, now that the war clouds hover dark on the horizon. "My Country, 'Tis of Thee," what better sentiment could we have in our minds and hearts nowadays?

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION. MEMBER OF AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Wisconsin Pasteurization Law.

Pasteurization of all Wisconsin milk will be urged by Dairy and Food Commissioner Weigle in the near future. An investigation of the entire milk situation in the state now under way and which is to be completed in May will disclose conditions regarding every step in the production of milk from the cow to the consumer. Cleanliness of barns, utensils, methods of handling milk before and after it reaches the dealers, butter fat contents and solids in the milk form the chief object of the investigation. Mr. Weigle is dissatisfied with the inspection work as it has been carried on in the smaller cities. "Towns with a population of 5,000 usually have doctors for inspectors. They can't give their time to the work and attend to their own business. The position of city health officer in most cities is one without pay, and, of course, the physician has to make a living. They can't give the time to analyze milk, inspect barns and watch the process of the milk from the cow to the consumer."

Compulsory pasteurization would, in the mind of the commissioner, do away with the danger from disease-spreading germs which he believes are present in certain classes of milk. He takes particular exception to the one and two-cow milk producer. "The great danger in the milk situation comes from the one and two-cow man, for the reason that a person gets the full strength of the disease-spreading germs from the milk of the small producer, whereas the milk of the big herd is not so harmful, because the power of the germ has been lessened by being diluted." With this in mind Commissioner Weigle is having a bill to be introduced in the legislature suggesting a central milk plant in every county in the state and in cities of sufficient size to support one. He would have the law compel all milk to be pasteurized at these plants.

The News of the World.

Now that the war clouds hover over the nation, it is highly important that every one should keep close track of national and international developments. Because of this, we have resumed the publication of our department in The Wisconsin Farmer, known as Current Events. The news of the world will be given herein, regularly, week after week, without bias or prejudice and with the strictest adherence to the facts. We feel confident that the resumption of this department will be welcomed by our readers, hundreds of whom have written to inquire in regard to it. Only the fact of the paper shortage compelled us to omit this important department for a few weeks. It becomes a regular feature of The Wisconsin Farmer again with this issue.

We urge upon all our readers, who wish to keep posted on developments in the world as they occur, as well as to secure the most practical advice and information on farming, that they attend to their subscription renewal immediately, without a day's delay. We shall keep you posted on world happenings, and it is important that you do not miss a single issue of this paper while the present crisis continues or throughout all the coming year. Send in your subscription renewal today, without delay, and induce as many neighbors and friends as you can to subscribe. We are confident that The Wisconsin Farmer will fill every need of every member of the farm household throughout the coming year. May we count on your hearty support as we set about what promises to be the busiest, biggest and most useful year of all the many The Wisconsin Farmer has been published?

Man Testing Associations.

The steady increase in popularity of the cow testing associations in the state of Wisconsin is in no small way responsible for the tremendous increase from year to year of the state's dairy production. From ten associations with a mere handful of cows in 1909 to fifty-eight such associations with a membership of 1,768 farmers and 27,724 cows in 1916 is a gain that is more than ordinary. Other associations have been formed, but are not on the records as yet, lacking testers and the final preparations which will put them on a permanent basis. The sessions of the officers and testers of these organizations during the Farmers' Week at Madison showed clearly that satisfaction and endorsement of the plan for the work to spread over the entire districts of dairying in the state is unanimous. From the addresses and informal talks by testers and members it was evident that the problems confronting them had not all been solved, but the solutions did not seem out of reach as in former days when the work was on more or less of an uncertain basis. The Wisconsin Dairymen's Association, sponsor for all movements that have tended toward a betterment for dairymen during the last forty-five years, is behind the work and where communities feel inclined to give only half-hearted support the association steps in and tries—and usually succeeds—in convincing the faltering ones that there is real benefit for the farmer in belonging to a testing association. The work of the Wisconsin Dairymen's Association in this one respect is of inestimable value to the state.

N. A. Negley, in charge of the testing work for the entire state, argues that the association ought really to be called a "man testing association," as the results really determine whether a man can sell the feed that has been given a cow to yield a profit or loss, whether the $30 worth of feed that the cow has consumed can be sold in the form of milk or cream at $15 or $45. The testing will tell the owner just where he is standing on the matter of profit. Some men do not want to join an association of this kind because they are afraid their cows are no good. To find out what cows are no good is the real purpose of the entire undertaking and the man who is afraid to look the facts squarely in the face is the one that is no good. The dumb beast ought not to be to blame for the mistake of the man in keeping and supporting such an animal. The man has the power to change these conditions and not the cow. Thus the men in charge of the testing work in the state, though they are highly pleased with the way the work is progressing, realize, nevertheless, that it is only a beginning and the big licks have yet to be handed out. Mr. Negley is in a fair position to judge what is lacking because of his extensive travels through the state and he estimates that there are fully 500,000 cows in Wisconsin, the leading dairy state of America, that can be classed as unprofitable. Surely, Wisconsin's lead would be everlastingly assured if these cows could all be made to produce even $1 each of profit in a year. There is a possibility of this if the men can be interested and awakened to their losses. The better dairymen are confident this can be done and through the Wisconsin Dairymen's Association are pushing the work as fast as they can. The plan has been fostered by The Wisconsin Farmer since its inception and through publicity and encouraging articles we have endeavored to help the good work along. We intend to do all we can in the future to make Wisconsin permanently the leader of dairying in the United States and the world.

Good Prices For Milk.

Mr. Frank Mellorn, cheesemaker, Buck Creek Factory, has sent us a sample statement for November, 1916. This statement shows 36,609 pounds of milk received in November and 4,557 pounds of cheese made. The average price received per pound of cheese was 24.83 cents and the average price per hundred pounds of milk, 2.86 plus. The average price per pound of butter fat was 64¾ cents and the average test of all milk received was 4.419. For the past nine months, ending February 1, 1917, this factory has paid an average of $1.87 per hundred for milk. This is an exceptionally good statement and indicates that the farmers of the Buck Creek Cheese Factory are receiving good treatment.

The "Favorite" of the Stables.

One of our subscribers calls attention to an instance where partiality was shown by a certain stockman to one individual animal while at the same time other animals that had more to do with the income of the family were ruthlessly neglected. His communication follows:

I have often noticed that on many farms there is a vast amount of partiality used with the stock in the stables during winter. To illustrate, a little incident that came under my observation. I was visiting and at the time the mercury stood below zero. It was bitter cold, and so different from weather at my home that I was well satisfied to sit in the comfortable sitting room and chat with friends. But I was to have a taste of the cold, for one morning uncle came in and said he wished I would go out with him and see his fine horse before I went away. So thinking that there was no time like the present, I gathered my wraps and went with him to the barn. As we entered the stable and I saw the noble animal, I did not wonder he was proud of him and, as to his surroundings, I have seen many a family whose home could not boast the comfort that was plainly visible in his roomy box stall. And how glad I felt that he was so sheltered from the cold.

But, during the day I noticed something else that was far from giving me pleasure. In a field a short ways from the barn was a straw stack near which were several head of cattle huddled closely together, striving to find shelter from the piercing wind.

As I thought of Black Beauty in his comfortable quarters, petted and caressed, I could but ask myself—why this difference? Now, this is not the case with all farmers, but it is too often seen; and it is not thus with the farmer alone, for in some of the larger dairies it is plain to be seen that the treatment bestowed upon the cow and the horse is vastly different.

The horse is kept in the cleanest possible condition and great care is exercised in arranging his bedding so that he may not be contaminated with filth. Then, after these precautions the comb and brush are brought into action, an attendant giving him the full benefit of their use.

But do they use these tools as liberally on the cattle as they should?

Now, if farmers would only consider the matter it seems to me they would admit that cleanliness is more important for the cow than for the horse, as her product—milk—is a substance very susceptible to odors, and if she is allowed to become filthy, it is liable to pass into the milk.

Yet I have heard men laugh at the idea of currying a cow, when they would work carefully for an hour, or more sometimes, if necessary to thoroughly clean a horse.

By giving her the extra care an increase in quantity of milk is received—its quality is improved and consequently a better price is received for butter and milk.

It is impossible for any milling process to make good flour out of poor wheat, and it is just as impossible to make good butter out of impure, filthy milk. I say give the horse this good care, but no better than the cow. Give them equal chances in the stable, and do not be partial to either. And the windy side of a straw stack or barbed wire fence is not good quarters for cattle or horses.

We believe that this is an exceptional case, and yet the instance contains an important truth. Those who are engaged in dairying in a half-hearted way do not realize the importance of distributing a little of their partiality among the individuals in the dairy herd. It is pure short-sightedness to allow the dairy cow to battle with the elements of winter, because in that case the feed she consumes and the labor involved in her care is practically wasted, because her products are seldom worth more than the cost of the maintenance ration. It would be most commendable if the affection, which is often lavished on a favorite horse, could be broadened out and be made to include every animal on the farm. Indeed, the difference between a successful and an unsuccessful stockman is simply this, that the former has a real affection for all his animals and handles them accordingly, while the latter has no special liking for the animals under his care and, therefore, shows no zeal in their care and management.

The Care of Seed Grain.

It is not a difficult matter to find certain farms producing a fifty and sixty-bushel per acre yield of small grain when farms of a similar nature not more than a mile or two away are producing about half this yield. There are several factors to which this difference in yield may be attributed, among which the manner of preparing the seed bed in the spring is of considerable importance. A large yield cannot be expected where the seed bed is not prepared with considerable care and the seed uniformly covered.

Then, there is the matter of grading the seed. It has been demonstrated over and over again at some of the stations that a given variety of grain may be kept from "running out" if it is carefully graded every year, so that the large, plump, heavy grains only are sown. One of the Canadian stations has been able to increase the yielding ability of certain varieties through a period of twenty-five years by the simple process of grading. On the other hand, it is well known that the average variety tends to run out, thereby creating the necessity for our educational institutions to constantly work improvements, either as the result of crossing, or selection. The time spent in running seed grain through the fanning mill will bring as large returns as any task that is performed during the whole year. In the case of oats, wheat and barley one can well afford to put the grain through the mill two or three times in order that all light kernels may be blown out and the small grain sifted out. When this is done it means that the grade of grain will run much more uniformly through a drill or broadcast seeder, and growth will be much more uniform right from the start than can possibly be the case where everything is sown just as it comes from the threshing machine.

Another important factor having to do with the maximum yield is that of eliminating the smut. Sometimes the yield is cut down as much as 10 or 15 per cent by this fungous pest, and yet it is entirely practicable to eliminate it altogether. Treatment for smut is a simple operation, but it should be deferred to such a time when the grain cannot be frozen after treatment.

The formula for the smut treatment involves the use of one pound of formalin to forty gallons of water. Place the oats on a floor and thoroughly wet them with this mixture. It will be necessary to shovel over the grain two or three times, taking special pains to see that every particle is made thoroughly wet. When this end has been attained, shovel the grain into a steep pile and then cover with horse blankets or gunny sacks for a period of two or three hours. Sometimes the grain is left in that condition overnight, and this may be done without any injurious results. Ten or twelve hours is as long as it should be left in this condition, after which hasten drying as rapidly as possible by frequently shoveling over the pile.

If there is room, scatter the grain so that it is not deeper than six inches on the floor, and even then it should be turned over every hour until most of the moisture has disappeared. Above all else, do not put moist grain in sacks, as it is apt to heat and the germ will be injured. If, for any reason, treatment is delayed until seeding time the grain may be sown when it is still moist, but the drill or seeder will have to be opened a little wider than would be the case if one were using dry grain.

Wisconsin's Experiences in Winterkilling.

Sec. L. F. Graber, of Madison, had a very encouraging report to make to the fifth annual section of the Wisconsin Alfalfa Order, held Farmers' Week. He predicts that within ten years Wisconsin will have 500,000 acres of alfalfa. This will come true according to Mr. Graber, because we need the feed. First-grade alfalfa hay has been costing Wisconsin farmers $20 to $25 a ton this year. Mr. Graber says we should raise most of our own alfalfa. He says the climate and soil conditions are right and that we might as well keep our alfalfa hay money at home. An effort will be made to increase the acreage of alfalfa to 70,000 the coming year.

Notwithstanding losses of winterkilling last year, the alfalfa association members were not discouraged. They understand that clover, winter wheat and rye also suffered. Mr. Graber, in his annual report, said that he received 322 reports from members in the spring of 1916 on the condition of their alfalfa fields seeded in 1914. Ninety-eight per cent of these growers had excellent stands in the fall of 1915. Fifty per cent had their good stands of 1915 ruined by winterkilling. Twenty-one per cent reported partial winterkilling and 29 per cent no winterkilling. In view of these facts, Mr. Graber strongly recommends a careful study by the individual growers of the causes of winterkilling. He says not to get the idea that cold weather necessarily brings on winterkilling. On the contrary, open winter weather with little snow to protect the plants and alternate freezing and thawing, especially on flat land without sufficient slope is responsible for the most serious winterkilling. If water accumulates and ice sheets form, the plants beneath are apt to be smothered out. We quote from Mr. Graber's annual report:

I am told that Mr. H. C. Davis, of Omro, Wisconsin, had a level field of alfalfa which was covered last spring with sheets of ice. It happened that a disk was left at one end of the field and it seems that Mr. Davis pulled the disk across the ice-bound field. In doing so the frozen crust was broken up considerably where the disk had been drawn. Late in the spring Mr. Davis was surprised to observe that the only part of his field which was not killed out was this one strip where he happened to have disked the ice. What is the explanation? The only one your secretary has to offer is that the accidental disking opened up the ice and provided entrance of air to the plants beneath. On the experiment station farm the ice sheets killed out the lower ends of some plots except along a narrow ridge which was just elevated or high enough not to be covered by the ice. Here the plants had air and were not smothered as was the case on either side of the ridge where the ice sheet extended.

All fall cutting (after September 5th) was disastrous last year to many good stands of alfalfa. Mr. Graber believes in "the 8-inch rule," which means that alfalfa should have at least eight inches growth before freezing weather in the fall. He points out that this means the last cutting should be made early enough so that the succeeding growth will reach a height of eight inches before the first severe frosts. He also says that in the southern part of Wisconsin seeding later than the first part of August is dangerous. Seeding this late is only successful when rainfall and favorable soil and weather conditions result in eight inches of growth before freezing occurs.

Seed of the hardiest known varieties should be used to prevent winterkilling. In June, 1914, Mr. Graber seeded sixteen separate plots of various strains of alfalfa coming from Kansas, Nebraska, Montana and the Dakotas. Excellent stands were obtained in 1915. A growth of 11 inches occurred before freezing in the winter of 1915 and 1916. Only four of these plots came through in good shape and the remaining twelve winterkilled from 41 to 78 per cent. In the several Dakota and Montana plots an average of 55 per cent of the plants were killed and these plots yielded only 3,842 pounds of cured hay an acre in two cuttings. Two plots sown with Kansas and Nebraska-grown seed winterkilled 52 per cent and yielded in two cuttings 4,470 pounds of cured hay an acre. They were even slightly better than the more northern-grown strains in this particular test. The four banner plots were seeded with seed of the variegated kinds of alfalfa—two with Grimm and two with Baltic. The average winterkilling for these four plots was only 27 per cent, and because the remaining plants spread out so rapidly and so early in the spring, this injury was not noticeable. They yielded an average of 6,045 pounds of cured hay an acre in two cuttings—a ton more than the common kinds, which had been seeded under identically the same conditions.

Grimm, Baltic and Cossack are recommended by Mr. Graber as the hardiest varieties and best adapted for farms where there has been trouble with winterkilling. The alfalfa order will aid in the co-operative purchase of such seed, for the benefit of its members and in addition will test out such seed. Last year the association distributed 100 five-pound samples of Grimm alfalfa seed and this year they expect to start at least 500 tests on the same variety. There is at present a membership of about 1,000 in the association.

The Wisconsin Alfalfa Order has been doing splendid missionary work, not the least important branch of which has been its endeavor to straighten out the troubles of farmers who are inexperienced with alfalfa.

Wisconsin Gas Engine and Tractor School.

The Engine and Tractor School was not one of the widely advertised happenings during Wisconsin's Farmers' Week, but the attendance was big enough to tax the force of instructors working under the direction of Prof. F. M. White to its full capacity. The short period of one week is barely enough to give the beginner all the points about engines, but for the men with a working knowledge of tractors and engines the time spent at the short course is most profitable. There were more than fifty men at the agricultural engineering building during the week, who had had farm experience and attended the course to have the knotty problems of engine ills made clear. The course as outlined is designed for the beginner as well as the man who has machinery troubles. Perfect knowledge can only follow when the essentials have been mastered. Thus the beginner can take the same course as is given, but he cannot draw the same lessons from the teaching as the man who has been over the ground before. Most of the men in attendance this year were not beginners. They were men that had used engines on their farms as a means of saving labor and it was with the idea of increasing their producing power that they took this work. They were on the job bright and early on the first day of the course. Whereas the usual student of the short course comes on Monday, these men for the greater part left their homes on Saturday and Sunday, so that they could be there from the very first. The interest of the men is a clear indication of the advance of farm power and the recognition accorded the engine as a labor saver.

The course took up the different types of engines in use, their advantages and disadvantages, the operation and care of the engines and the proper way of testing them. Wiring systems were studied, valves and carburetors discussed and studied and ignition problems explained. The various types of motors in tractors were taken up and each given a thorough tryout in the laboratory. Every subject was first thoroughly discussed in the classroom and then taken up in the laboratory. The hundreds of questions asked during these periods would fill a book. The instruction is given for the purpose of solving the many questions that arise under similar circumstances on the farm, so each question was answered with the cheerfulness that characterizes Wisconsin's great college of agriculture. The success that this course has attained on sheer merit is indication enough that the next season will see an attendance that will force the staff of Mr. White to move into larger and more roomy quarters in order to give better laboratory facilities.

Naturally the keenest interest was in tractors, and if there is anyone who imagines Wisconsin farmers are not interested in this new form of farm power, they should have been with Mr. White, his workers and visitors Farmers' Week. They would certainly have gotten a new conception of the value of the agricultural engineering division of the "Ag." school.

Live Stock Associations Elect.

Officers for the ensuing year were elected by members of the Wisconsin Live Stock Breeders' Association at their annual meeting held during Tuesday's program of Farmers' Week.

The officers chosen were: Arthur Broughton, Albany, president; J. P. Riordan, Mayville, vice president; L. F. Atwater, Bangor, treasurer; A. W. Hopkins, Madison, secretary; Raymond Baker, Madison, assistant secretary; W. L. Houser, Mondovi; J. C. Robinson, Evansville; F. E. Fox, Waukesha, executive committee.

The Wisconsin Sheep Breeders' Association elected Arthur Broughton, Albany, president; S. E. Crall, Evansville, vice president; W. F. Renk, Sun Prairie, secretary, and G. Phillippi, Bear Creek, treasurer.

Other state breed clubs whose officers for the year have been electd this week follow:

Wisconsin Aberdeen Angus Breeders' Association—Parke Gelbach, Lancaster, president; H. J. Pettinger, Oconto, vice president; J. G. Fuller, Madison, secretary-treasurer.

Wisconsin Red Polled Cattle Club—L. B. Ahlers, West Bend, president; B. R. Curran, Taylor, vice president; L. C. Underwood, Avoca, secretary-treasurer.

Wisconsin Hampshire Breeders' Association—H. A. Bush, Fond du Lac, president; A. L. Damon, Richland Center; first vice president; James Clemmens, Kanesville, second vice president; W. W. Meacham, Downing, secretary-treasurer; E. E. Cowles, Elkhorn; T. C. Wilsie, Brandon, directors.

Wisconsin Chester White Breeders' Association—James Fisher, Eastman, president; W. M. Butts, Evansville, vice president; A. H. Kuhlman, Madison, secretary-treasurer; W. F. Belda, De Forest; Bruce Westcott, Barton; H. Hoesley, Monticello, directors.

Wisconsin Berkshire Breeders' Association—H. C. Taylor, Beloit, president; George Kelley, Mineral Point, vice president; W. A. Freehoff, Waukesha, secretary-treasurer; George Clark, Janesville; G. H. Whitmore, Lyons; A. P. Cortte, Lomira; W. D. Becker, Ft. Atkinson, directors.

Wisconsin Horse Breeders' Association—W. K. Caldwell, Morrisonville, president; J. G. Boyd, Milwaukee, vice president; J. G. Fuller, Madison, secretary-treasurer; J. P. Riordan, Mayville; C. E. Cole, Marshall; James Van Etta, Lima Center, directors.

Poland China Breeders' Association—Robert Smiley, Albany, president; J. D. McDonald, North Bend, vice president; Burley Dobson, Lancaster, secretary-treasurer.

Ayrshire Breeders' Association—James Van Etta, Lima Center, president; Adam Seitz, Waukesha, vice president; A. J. McNab, Black River Falls, secretary-treasurer; T. C. Hill, Brookfield; Stephen Bull, Dr. David Roberts, Waukesha, executive committee.

Jersey Breeders' Association—F. F. Showers, Delavan, president; W. H. Clark, Rice Lake, vice president; E. E. Wyatt, Tomah, secretary-treasurer.

Brown Swiss Breeders' Association—Ira Inman, Beloit, president; H. C. Taylor, Madison, secretary-treasurer; Joseph Allen, Delavan, vice president; H. W. Ayers, Honey Creek, member of executive committee.

Medals For Wisconsin Farmers.

The following is a complete list of the gold, silver and bronze medals awarded to Wisconsin farmers, members of the Wisconsin Agricultural Experiment Association, at the Panama-Pacific Exposition last year:

GOLD MEDALS.

Agricultural Exhibit—Wisconsin Agricultural Experiment Association, Madison, Wis.

Corn—J. E. Brunker, Ridgeway, Wis.; J. R. Thorpe, Travera, Wis.; H. C. Brueckner, Jefferson, Wis.; C. S. Ristow, Black River Falls, Wis.; A. A. Austin, Janesville, Wis.

Alfalfa—Swartz Bros., Cornfalfa Farms, Waukesha, Wis.

Tobacco Exhibit—W. I. Pomeroy Co., Edgerton, Wis.; Theo Oberson, Westby, Wis.

Wheat—Hieron Block, Burlington, Wis.

Cranberries—Wisconsin Sales Co., Grand Rapids, Wis.

Seeds—H. R. West, Ripon, Wis.

SILVER MEDALS.

Corn—R. T. Bohl, Beaver Dam, Wis.; E. E. Clingman, Reedsburg, Wis.; Jno. Dettwiler, Monroe, Wis.; O. A. Haney, Lone Rock, Wis.; O. J. Hocketsweiler, Alma Center, Wis.; H. S. Hintz, Oakfield, Wis.; Chas. H. Howitt, Randolph, Wis.; A. C. Ellickson, Arlington, Wis.; Joe Haus Jefferson, Wis.; George H. Leonard, Jefferson, Wis.; Wm. Leonard, Jefferson, Wis.; Frank Joos, Alma Center, Wis.; Arthur Popp, Jefferson, Wis.; Robert Rodwell, Baraboo, Wis.; R. B. Thorpe, Monroe, Wis.; J. A BOY'S CHARACTERISTIC ATTACK.

Swap Experiences Swine Week.

Allied Live Stock Associations Join With College of Agriculture in Starting the "Spring Drive" For More and Better Hogs in Wisconsin.

SNOW storms interfered with train service in Wisconsin the early part of Farmers' Week and the attendance at Madison was less on the opening days than was expected. Beginning with Wednesday and for the remaining days of the week there was a splendid attendance, representative of live stock and general farming interests throughout the entire state. There was no "soft pedal" on any of the usual activities of Farmers' Week, but special emphasis was laid upon the possibilities of swine raising in this state. Through the co-operation of some of the best breeders of the state and the animal husbandry department of the college of agriculture it was possible to arrange a very creditable exhibit of swine. This was made doubly emphatic in its lesson to the visitors by reason of the presence of several scrub hogs in the pens at the swine pavilion. It was easily possible for the visitors to compare the scrub hog with the well-bred animal. It was also possible to compare the prices which a scrub hog will bring on the market with the prices which the well-bred hog will bring. One of the most interesting features of the exhibit was the classification of hogs as they are rated at the market, showing such animals as are listed as heavy, mixed and butchers, light, etc. The aim of those who arranged the exhibit and also the swine products was to educate the farmer as to what the market demands, and this aim was accomplished with marked success. The exhibit at the stock pavilion also included a variety of pork products and by-products, showing that it is literally true that every part of the hog sold on the market is used up "except the squeal." Various methods for preparing pork products for the table were also aptly illustrated by appetizing dishes prepared under the direction of the domestic science department.

Those who visited Madison Swine Week got a new conception of the possibilities of hog raising from the breeders' standpoint. This has been the greatest season that the hog breeders of Wisconsin have ever known. Something like fifteen important hog sales have been held and prices have been better than in any previous year. Representatives of Poland China and Duroc Jersey breeds consigned some very excellent animals to sales which were held Wednesday afternoon and evening. At these sales almost $8,000 worth of good stuff was disposed of. This certainly indicates a desire on the part of Wisconsin farmers to get good foundation stock. The average

W. L. CARLYLE, OKLAHOMA.

Dean of Oklahoma Agricultural School who renewed old acquaintances at Madison last week.

for the two sales, in which almost 100 individuals were sold, was around $80—the top was $175. We expect the educational campaign carried on throughout Swine Week will be a wonderful stimulus to the swine industry of this state.

A. M. Laird, of Crawford county, has been raising pure-bred hogs for a number of years and has only recently retired from the business. He related at Madison an experience which will be of interest: A few miles from his place last summer a farmer raised eighty scrub pigs from twenty scrub sows that had been mated to a scrub sire. These pigs were farrowed in April and May. Late in October they weighed an average of sixty pounds and were sold at $6.60 per hundredweight. Of course, this is a discouraging side of the swine picture. Mr. Laird referred to another man a few miles from his place who had a herd of pure-bred Chester White hogs "of that low-down, heavy-boned, stretchy variety." Mr. Laird did not undertake to say just how much these pigs weighed in October, but it was probably two or three times sixty pounds each. The pigs were sold at fancy prices. They came from the James Fisher farm and most Wisconsin hog

A. H. WILKINSON, BAYFIELD,

Tells some interesting facts about making a dairyman in northern Wisconsin.

men know that means they were good pigs. Mr. Laird said the farmers who raise pigs must consider that time is an important element. Where applied to pork production it is capital and the farmer who takes too much time in producing a 250-pound hog is going to lose money. It takes some brains to grow a 250-pound hog in six to eight months, but many of the breeders of Wisconsin are doing it and, as Mr. Laird aptly puts it, the secret of the mystery is simply this: "Good foundation stock plus care and feed and brains."

Mr. L. P. Martiny, of Chippewa county, in his address recommended a liberal use of pastures to develop size in hogs. He rates the relative value of pastures as follows: First, alfalfa; second, clover; third, rape; fourth, June grass. He also says that white peas, rye, oats and sorghum may be used to good advantage. The early June grass pasture is his favorite, but this soon becomes tough and he likes to have a nice field of young clover or alfalfa to provide good rape pasture. Mr. Martiny recommends sowing two or three lots at intervals for two or three weeks and in about three weeks or so these pastures will be ready to turn in, and the pastures may be alternated all season, giving a good supply of feed up until early winter. On the Martiny farm, where about 100 pigs are raised for breeding stock, a regular rotation, including pastures, has been worked out. This provides a fresh pasture each year and the pigs are kept away from old yards which are sure to become more or less infected with worms. Mr. Martiny has a low-down wagon and a horse which he uses for carrying feed and water to the hogs at one trip. Mr. Martiny regards shade as very important for hogs. A grove or wood lot or brush lot offers the best kind of shade. He advises by all means to arrange hoghouses and pastures so that hogs may have access to wood or brush lots and especially so if there is running water in connection.

Thirty years ago James Fisher, of Eastman, Wisconsin, began breeding and advertising hogs. He has been a consistent user of advertising, always believing that it was not enough to raise good stock, but that he must let other people know about it. Furthermore, he has gotten away from the old idea that to increase business one must assassinate his competitor and he believes in the new doctrine of co-operation with other hog breeders who have stock to sell. Mr. Fisher told the swine breeders at Madison that they must not expect advertising to bring many direct sales. The advertising brings the customer and the breeder makes the sales. For this reason it is very important to handle carefully all inquiries and to handle

M. D. MUNN, ST. PAUL,

President of the National Dairy Council and a leader in dairy improvement work.

them promptly. Mr. Fisher says that any man who asserts that he cannot find time to answer his letters has no business to spend money advertising. Letters, in his judgment, should be answered to fit each individual inquiry. Before advertising in a farm paper, Mr. Fisher assures himself of the circulation and advertising value of the medium and he looks over a publication to see whether it carries fraudulent advertising. He says that it is his experience that he cannot get best results from a publication which has distrust put into its readers by a parade of fraudulent advertisements. Furthermore, Mr. Fisher advises advertising consistently and regularly. The men we meet daily we know and have confidence in, providing they are worthy of confidence. The advertisement which appears regularly establishes acquaintanceship between the advertiser and the customer and Mr. Fisher says that the advertisement which stays in the paper year in and year out gets the most business. He remarks that when you hear a man say advertising doesn't pay, it is usually because he has had little experience or got "cold feet" early in the game and quit. The advertiser who stops advertising is soon dead to the world. There is no business built up by advertising which will ever be big enough to be its own advertisement and continue to grow after the advertising ceases. Of course, Mr. Fisher believes that the breeder should advertise truthfully; that he should not advertise beyond his ability to supply the demand created, and that he should supply stock which will continue to be a good advertiseemnt to his business. It is Mr. Fisher's idea that the successful hog breeder should improve his offerings every year and that he should price his hogs fairly, but not at boom prices.

G. B. Van Norman, of the Union Stockyards, Chicago, was raising and buying hogs in Sauk county fifty years ago. At that time Wisconsin hogs were not known by breeds, but were designated as black and white, spotted, or sandy and white. Dressed hogs could be shipped only during the winter and the country had to depend largely upon barreled pork and cured hog products. While hogs sold high during the war of the rebellion, in which Mr. Van Norman had a part as a Wisconsin soldier, they brought only $2.50 to $3 per hundredweight several years later until the refrigerator and world-wide system of distribution began to play such an important part in the market. As to market breed preferences, Mr. Van Norman says there are none. One of the biggest buyers expressed this as follows: "We don't care what the color of the hog is or what his breeding is so long as he is well matured. In the packing industry we prefer hogs averaging from 200 to 250 pounds in weight, that is for general packing purposes we like a few lighter hogs which are lean and in very healthy condition, but weighing about 180 pounds. These are used for English meats and are shipped to Canada and from there exported to Liverpool and London."

Mr. Van Norman out of his years of rich experience as a hog raiser gave some interesting suggestions, most of which have developed from his experiences on his farms at Elgin, Illinois, and Mukwanago, Waukesha county, Wisconsin. He says breeders should be careful to have their hog pens properly ventilated. Many breeders get careless and let their hogs sleep in damp bedding and the animals sweat and get heated and when they come out catch cold, and this is often followed by a cough which may be a sign of tuberculosis. On his Elgin farm Mr. Van Norman had individual hoghouses for brood sows and a cement floor for feeding corn. He insisted that no dust be allowed in his hoghouses. He visited the farm once a week and if he found dust it was ordered cleaned out at once and the floor sprinkled with creosote dip. While his hogs were treated as hogs on many dairy farms, running before the cattle, they had well-ventilated houses in which to sleep. Every twelve feet of the hoghouse had a nice window in it. The hogs were not allowed to lie upon the horse manure piles and were kept bedded in nice shape in winter. The hogs were given plenty of exercise and nice alfalfa feed in which to run and plenty of

Smith Form-a-Truck

The shaded portion of the chassis illustration shows the Smith Form-a-Truck Attachment which carries 90% of the load, bolted to the car power plant, with a vice-like grip.

$350
F. O. B. CHICAGO

Eight Bodies in One

It Sounded the Knell of Horses *in all* Farm Hauling

HUNDREDS upon hundreds of up-to-date farmers, who figure time in dollars and cents, have made tremendous savings with Smith Form-a-Truck. It is taking the place of horses for hauling milk and farm products to town. It is doing heavy service work of all kinds about the farm.

With their Smith Form-a-Trucks they are carrying loads that are impossible for horses—*twice* the load of any team. And they are doing the work in *half* the time. Think what this means in time and money.

Idle Horses Cost Money—Idle Trucks Cost Nothing

Agricultural experts state that farm horses work but 1000 hours a year—100 days of 10 hours each. Over *two-thirds* of the year they are eating their heads off. They need stabling. They need veterinary attention. They need the attention of your hired help. And you get 100 days work for this 365 days of expense and attention. Think of it.

Your Form-a-Truck costs you nothing when it is idle. It requires feed (gasoline) *only when it is working.* So you save the expense of horses during 265 days of idleness. And it does your work far cheaper than horses.

Yet this remarkably efficient, money saving Smith Form-a-Truck which does the work of *two* teams at *half* the expense costs no more than a *single* team. Think of it!

You are replacing old fashioned farming methods with modern labor-saving, time-saving machinery in other branches of your farm work. The time has now come to discard the old-fashioned expensive methods of hauling. Put a Smith Form-a-Truck on your farm now.

The Smith Form-a-Truck combines with any Ford, Maxwell, Dodge, Buick, or Overland Car, to make a fully guaranteed one-ton truck. 9,652 users in every line of business in the country are now saving money with the Smith Form-a-Truck. Hundreds upon hundreds of farmers have made tremendous savings. You, too, can do what these farmers have done.

The Famous Eight-in-One Farm Body

Every possible use for a truck on the farm is covered in the new collapsible farm body—an exclusive feature of Smith Form-a-Truck. Pull the lever and you get any one of eight combinations of farm bodies—Stock Rack body—Hay Rack—Basket Rack—Hog Rack—Grain—Flat Rack—High Flare board—flet back—swoop board down. Change from one type to another in an instant—without a single tool.

Rust Proof Steel
CHIEF
Sunshine Windows

FOR HOG HOUSES AND ALL FARM BUILDINGS

The right windows for your farm buildings. Made of permanent material—heavy galvanized steel. Embody all the new improvements that mean service and satisfaction. Pay for themselves over and over in saving repairs and replacements. Don't rot out or rust out—cannot warp, shrink or swell. Last a lifetime for satisfactory service.

500,000 NOW IN USE

Wm. Lindsay, Helena, Mont. "Sunshine Windows save pigs."

S. O. Kolsto, Newhall, Ia. "They are right."

Chief Sunshine Windows are found in every community. Look for the man who makes a big success of hog raising — he'll be a Chief Sunshine Window enthusiast and will attribute his success to the fact that his winter pigs had sunshine in their pens and plenty of it. On request we will send you pictures of the finest hog houses in this country—all Chief equipped. We'll show you sample letters from thousands of users.

GIVE YOUR PIGS A CHANCE

It's the Winter pigs that make the money and Winter pigs need sunshine—it makes them healthy, strong, quick-growing. Equip your hog house with the famous Chief Sunshine Windows—give the pigs a chance. Most popular—most satisfactory windows you can buy. Rust and rot-proof. Cannot leak. Need no paint—no repairs. Nothing to wear out. Worth 3 times as much as wooden windows—cost no more.

FREE To Hog Raisers--New Swine Record and Four Blue Prints of Modern Hog Houses

Our gift to you—no strings attached. We'll send you absolutely free our Swine Record System so that you can keep absolute track of your herd day by day. A wonderful help to any hog raiser. We'll also send you our portfolio of 4 complete blue prints for constructing modern, up-to-the-minute hog houses. Write today.

Faultless Stump Puller

At a Special Low Price

The Faultless actually pulls from 50 to 100 percent more stumps at less cost of time and labor than any other stump puller. The cable winds onto the drum at the bottom all the time and the idle coils slide toward the top. This keeps the pull down and in a direct line with the anchor, and increases power. The machine cannot tip. Drum accommodates all of the cable, and it goes on only one layer deep. This prevents wear and relieves the strain on team and machine.

Machine and Cable are Guaranteed

against breakage for one year. Machines in use 15 years and longer are still in service.

Pull Stumps for 10 Days---Free

Clear from 10 to 50 acres. If not then satisfied that the Faultless Stump Puller will do more than we claim, return it to us at our expense.

The superiority of the Faultless is recognized by hundreds of farmers and railroads. It received highest awards at both the World's Fair at St. Louis and the Lewis & Clark Exposition at Portland in competitive demonstrations.

Write for special low price on our complete outfit, and our free book on clearing stump land.

Faultless Stump Puller Company, Dept. W, Cresco, Iowa.

CURRENT EVENTS

WAR between the United States and Germany hinges upon the commission of some overt act on the part of the latter. Whether the sinking of the liner, California, will constitute this act had not been officially determined at the close of the week. The California is the first large liner (she was en route from New York to Glasgow, with 200 passengers on board) to be sunk by Germany since the Arabia was sunk, some months ago. Most of the passengers of the California seem to have been saved, but it is charged that the boat was torpedoed without warning. President Wilson simply awaits the commission of some act, which he believes to be an unfriendly one and which he believes will arouse the whole nation, to go before congress and secure a declaration of war, with the necessary permission to him to take whatever further steps his judgment dictates. The situation becomes more critical day by day, for Germany has resumed its undersea activity on a large scale, merchant vessels going down at the rate of 25,000 to 30,000 tons a day, at which rate the complete blockade of Great Britain would soon be effected. President Wilson is attempting to prepare for war, while at the same time doing nothing to give Germany open affront and make the situation more critical. This was the condition of affairs at the close of the week, with any moment likely to precipitate open hostilities.

PRESIDENT WILSON'S severance of diplomatic relations with Germany was formally approved by the United States senate by a vote of seventy-eight to five. Those who opposed the move were Senators LaFollette, of Wisconsin; Grona, of North Dakota, Works, of California; Kirby, of Arkansas, and Vardaman, of Mississippi. The first three are republicans, the last two democrats. Five hours of debate preceded the vote, but the only active opposition came from the five senators who stood out against the resolution when the roll was called. The ranking republican leaders joined the democrats in declaring their wholehearted support of the president. After reciting the causes which led up to the break the resolution concluded: "Whereas, Notwithstanding this severance of diplomatic intercourse, the president has expressed his desire to avoid conflict with the imperial German government, and, Whereas, The president declared in his said address that if in his judgment an occasion should arise for further action in the premises to preserve the rights of the American government he would submit the matter to the congress and ask the authority of congress to use such measures as he might deem necessary for protection of American seamen and people in the prosecution of their peaceful and legitimate errands on the high seas. Therefore, Be it Resolved, by the senate, That the senate approves the action taken by the president, as set forth in his address delivered before congress as stated above."

SWEEPING provisions for commandeering vessels and other shipping facilities in case of war or threatened war are contained in a bill introduced in congress and backed by a request from the administration that it be pressed to immediate passage. The president would be authorized to take over "in time of war or any proclaimed emergency, a vessel owned by any citizen of the United States or a corporation formed in the United States; any vessel building in the United States; any vessel registered under the American flag; any vessel purchased, leased or chartered by the federal shipping board; or any other instrumentality of water commerce, within the country, including docks, warehouses and other facilities." A provision is attached specifically prohibiting sale of American vessels to foreigners or their transfer to foreign flags in times of emergency.

EVERY effort is being made by the Germans to disable as many as possible of the steamships which they have voluntarily interned in American ports. The principal liners of the German companies have been laid up in New York and Boston harbors ever since the war broke out, but now that there is a possibility of the United States seizing these vessels, the Germans have removed valves and plates and otherwise tampered with the machinery so as to make it impossible for them to be operated. Should war between the United States and Germany eventuate, the United States would seize and use these ships, reserving the payment to the owners until after the war was ended. The Germans are doing everything possible to prevent their own vessels being used against themselves.

CONGRESS passed the immigration bill, providing a literacy qualification over the veto of President Wilson, notwithstanding the eleventh hour warning that Japan had again protested against the language of the Asiatic clause. The literacy test excludes from the United States all aliens over sixteen years of age, physically capable of reading, who cannot read the English language or some other language or dialect. Any admissible alien, however, or any citizen of the United States, may bring in or send for his father or grandfather over fifty-five years of age; his wife, mother, grandmother or unmarried or widowed daughter, if otherwise admissible, regardless of whether such relatives can read. This same literacy test had been vetoed by President Cleveland, President Taft and President Wilson a couple of years ago. Only thirty vetoes have been overridden in the history of the United States, and but four of them within the past thirty-five years.

A COLD wave made heavy inroads on the winter fruit and vegetable crop in the southern producing belt during the past week. The citrus fields as far south as middle Florida were severely damaged and the year's production of tomatoes and potatoes virtually wiped out. Vegetation in Louisiana also suffered heavily. Messages from Florida growers state that in seventeen years no such crop damage has been wrought in the Florida fields. They declare that all vegetation to the southern tip of the penisula has been frozen. These dispatches indicate that much of the state's cabbage, celery and lettuce crops will be saved, however.

THERE is little likelihood of any of the other neutral nations joining with the United States in the protest against Germany's unrestricted use of the submarine. Switzerland has already announced that it does not care to join with President Wilson in his program. Spain is busily engaged in getting upon a war footing, but there is not much probability that it will take definite action in the near future. Some of the northern countries neighboring on Germany have been greatly incensed at the high-handed manner in which their shipping has been destroyed or been interfered with, but they are not in a position to take summary action. Germany points to the plight of Roumania as an example of what may be expected by any small country which might join forces with the allies against it. The refusal of the other neutral nations to join with them does not in any manner influence the president's policy, as he believes in taking whatever steps may be necessary to protect American shipping rights.

CONGRESS is busily engaged taking the necessary preliminary steps to put the United States on a war basis. The annual naval bill has been hurried to completion, additional appropriations totaling $15,000,000 being added. Of this amount $5,000,000 is for ammunition for merchants' auxiliaries fleet and $2,000,000 for anti-aircraft guns to defend naval stations. While this has been in progress the regular annual army appropriation measure has been seriously considered. This bill carries a total of $247,000,000; among the largest items for new equipment being $8,000,000 for aviation and $5,500,000 for automatic guns for the army and national guard. In both respects the United States has lagged behind foreign nations.

Pull Big Stumps by hand

Clear your stump land cheaply—no digging, no expense for teams and powder. One man with a K can rip out any stump that can be pulled with the best inch steel cable.

Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48-ton pull on the stump. Made of Krupp steel—guaranteed against breakage. Endorsed by U. S. Government experts.

Facts About Bull Associations.

How They Are Organized and Conducted and the Benefits Which Are Derived From Such Co-operative Effort.

BULL associations are closely related to cow-testing work and have been accompanied by so much success in Denmark that several years ago the United State Department of Agriculture took the work in hand the same as cow-testing work, and is now sending special agents through the country, advising the formation of such associations and educating the people to the advantages that such organizations carry with them. At the recent Farmers' Week at the university, Joel Winkjer, of the United States Department of Agriculture, gave an interesting talk on the different phases of the work, and, though most of us had an idea what the work and object of the work was, not very many of us felt that the plan was feasible in the better centers of dairying. However, after listening to Mr. Winkjer's detailed explanation of the entire plan it seems highly probable that such an association will in the future be quite popular throughout the country. A handicap in America is to some extent the comparatively wide range that such an association will comprise in many instances due to the larger sized farms here than in older countries. But this can be overcome by a little planning and some sacrifices to convenience.

The object of a bull association, according to the United States Department of Agriculture, is the improvement of herds by the ownership, use and exchange of high-class sires. The difficulty in running a bull association successfully is in the fact that there is nothing tangible about it as in the case of other assocaitions. In the cow-testing association the tester is the man that gives the organization the solidity which is necessary for success. He makes his rounds each month and the members have nothing to worry over after he has been employed and shows that he can take care of his work. In the bull association, however, the interest of the members must keep the plan alive and the proper officers must be at the head of the organization to make the venture a benefit. Each member of the association must be convinced that in this plan the majority rule must be adhered to, or ruin will follow. The slightest show of selfish interest will make the results doubtful, as there can be but one main issue—the systematic improvement of the herds.

When a number of farmers club together for this purpose, they must first decide on the breed that is to be raised by them. The number of farmers that wish to form the different "blocks" is the next point. Often two men wish to have a bull for their exclusive use, and these can form one block, or perhaps ten or more wish to go together and constitute a block. The number of cows for each is then determined and either a pro rata charge is made, or the money is assessed on the number of cows in the different herds. Each bull is assigned to a group or block for a period of two years, at which time he is transferred to the next block and the rotation completed, depending on the number of blocks in the community.

An association of this kind in the main has, for an advantage, the greater buying power of combined funds. Where the individual farmer can probably afford but $100 for a sire, and the herd on his place is by far not large enough to give the bull a full season of usefulness, and twenty farmers are in the same position, it requires only a few minutes' figuring to be convinced that pooling the funds will give all a greater capital to work with. For this money they can buy fewer, but better, bulls to do the work, according to the division that can also readily be worked out on the basis of the sire's capacity. Every two or five or ten farmers can form a "block" and use the bull of known ancestry and high-producing powers for a period of two years when he is shifted to another block, and this process continued until the circuit is completed. A deterring factor in most cases has been the fear of transmission of disease through the use of the sires on different herds, but that is a problem which is really a benefit in disguise. The very fact that the fear is there will help to make farmers clean up their herds and rid themselves of the diseased animals, because of the danger of infecting other animals. The risk attendant in the purchase is not so great as in the case of the individual buyer. All members have a word in the kind of sire that is to be bought and greater care if anything will be exercised in this case than in the purchase of individuals. Also the individual purchaser takes chances when he is buying animals, but no one would quit the dairying game because of an unfortunate purchase. An association is better situated than the individual to stand the loss of a bull, as in most cases the assessment on each man is less than if he were to pay for an inferior bull. There is merit in the plan and Wisconsin farmers that have seen the value of cow-testing work and the benefits of organization there ought not to be slow in giving this plan serious consideration.

Hog-Tone Makes Litters Thrifty

"I enclose you herewith a photograph of my 86 head of AVALON FARMS HOG-TONE hogs which Mr. P. S. Richey, feeding expert of the Purdue University College Experiment Station says is the best bunch of hogs of the size which he has seen in Indiana this year. The mothers of these hogs were all treated with AVALON FARMS HOG-TONE during pregnancy and these hogs have been regularly treated with AVALON FARMS HOG-TONE since weaning. Thirteen sows farrowed 182 pigs the latter part of last March. I lost some from cold; sold some and butchered some, but have 86 hogs left now (Jan. 12, 1917). These were weighed on January 6th and averag d 286 pounds at about 7½ months of age. There is not to exceed 10 pounds difference between the heaviest and the lightest one. I treat all my hogs with AVALON FARMS HOG-TONE regularly."
H. M. Gieseking, Arcola, Ind.

First Bottle Hog-Tone Made Me $100

"I had a bunch of hogs, 30 head in all, and they got sick. I thought they had the cholera, as two of them died and there was cholera all around me. I got a bottle of your Hog-Tone and they got better. My first bottle of Hog-Tone made me one hundred dollars ($100.00) as it saved more than that many dollars' worth of hogs for me."
H. O. Michael, R. No. 2, Markle, Ind.

Well Pleased With Hog-Tone

"I have fed 54 hogs your Hog-Tone and it shows good results, so I feel well pleased with Hog-Tone."
Albert Wagner, Hooper, Nebr.

5 Weeks' Treatment Produced Wonderful Gain

"I didn't have much faith in HOG-TONE when it first arrived. But it is different from others—the others being in powdered form. HOG-TONE being a liquid form, is so easily fed in the swill that you obtain the desired results. I took a couple of shoats that did not seem to be doing well from a larger bunch of hogs and began by feeding them some of your HOG-TONE, and in about five weeks' time you would not have believed they were the same hogs. They grew so rapidly and made such fast gains that now I have them back with the other hogs and when feeding time comes they are the biggest scrappers in the bunch. Thanks to you for your bottle of HOG-TONE."
Perry Stratton, Berkshire Breeder, Momence, Ill.

Saved Hogs Stricken With Cholera Symptoms

"I had a bunch of seven hogs. They took sick and two died. Three of them would not not eat at all. After the first dose of Hog-Tone they commenced to improve and continued to do so. I thought these hogs had the cholera, as they acted like it and the neighbors had it all around me and their hogs died. My hogs never missed a feed after feeding Hog-Tone and they made good hogs. I will not be without Hog-Tone from this time on, as I cannot afford to take chances for what Hog-Tone costs."
Guy Hoopingarner, R. No. 1, Uniondale, Ind.

60 Days' Treatment Absolutely Satisfactory

"I received the sixty days' treatment of AVALON FARMS HOG-TONE some time ago and find it to be absolutely satisfactory in every way." Max Schultz, Irondale, Mo.

Wonderful Improvement in 60 Days

"I have been treating my hogs with HOG-TONE for sixty days and see wonderful improvements in their condition. I am satisfied that it is showing me 400 per cent profits." Herman G. Behrens, Palmer, Ia.

Hog-Tone Saved 5 Hogs

"Some time ago I had 14 head of hogs that would not fatten. I could not get them to gain any. I selected out 9 that the shippers would buy and sold them and kept the 5 that were in such bad shape that they would not buy them. Shortly after one of my neighbors advised me to try your HOG-TONE. I purchased a bottle at the drug store and began to feed it. They began to show results as soon as they got the second dose and I never had hogs do better than they did. They fed out and made fine stuff and I butchered them for my meat. I never saw nicer meat and they were absolutely clean, no worms of any kind to be found. I can recommend HOG-TONE to anybody for it did the work for me. It makes them eat and they get the benefit from what they eat." B. F. Conrad
R. F. D. No. 12, Columbia City, Ind.

THIS means exactly what it says. I don't want you to send me a penny of money. Keep it in your pocket. Simply mail the coupon to me. I will ship you one big $1.00 bottle containing a full quart (32 ounces) of Hog-Tone for each eight hogs in your herd—the day the coupon below, filled in, reaches this office. That will be sufficient to treat **all** your hogs 60 days or more, according to size. This will mean just 12½ cents per hog for **all** the treatment, and that treatment is **guaranteed** by me to free your hogs of **all** worms—to enable them to put on more weight from the same feed—to fill them with strength and vitality to resist disease attacks.

Accept this offer at once! Don't let worms threaten the health—the lives of your hogs one day longer. Worms are eating away your hog profits. It is useless to deny that. The U. S. Dept. of Agriculture declares: "Nearly every hog is infested with worms." "More hogs may be lost from worms this year than from hog cholera, and many cases of apparent cholera are only worms," says Bulletin No. 470 of South Dakota State College.

AVALON FARMS HOG-TONE

The *Liquid* Worm Killer and Hog Conditioner To Treat All Your Hogs for 60 Days—FREE—At My Risk!

Avalon Farms Hog-Tone is a highly concentrated liquid medicine for hogs only. It contains important medical ingredients, which are liquids and which cannot be combined in medicated salts, stock foods or condition powders of any kind. Avalon Farms Hog-Tone is safe. It is very easy to treat your hogs with Avalon Farms Hog-Tone. It is easily mixed with any kind of slops, with the drinking water or dampened feed. It is only given every third day for the first six weeks and after that only once a week. 100 PER CENT STRONG.

Hog-Tone cleans out every kind of worms that infest hogs—malignant Thorn Head Worms—Stomach Worms—Liver Worms—Lung and Bronchial Worms. By doing so, it gives protection to your hogs from easily contracting Cholera, Rheumatism, Scours, Thumps, caused by worms and Indigestion, Enteritis, and other diseases. A simply wonderful tonic and conditioner—**gives hogs voracious appetites**, aids digestion, helps them thrive, grow and put on fast increases of flesh. **Splendid for pregnant sows—it is absolutely safe and assures sturdier, healthier litters.**

Keep Your Money in Your Pocket! Simply Send Me the Coupon!

Simply tell me how many head of hogs you have—write down your name and address and mail to me. I will immediately ship you enough Avalon Farms Hog-Tone to treat your hogs for 60 days! You simply pay the transportation charges. Treat your hogs according to directions. If at the end of the treatment you are not completely satisfied—simply return the labels to me and you don't owe me a cent.

SILAGE IN FARM RATIONS.

Iowa Station Obtains Good Results From a Ration Short on Grain and Long on Ensilage.

CORN-BELT farmers and feeders are becoming more and more interested in the possibilities of silage feeding. It is with the hope that more men may be influenced to include a silo in their farm equipment that this circular is published.

Stock feeding, because of the high price of land and grains, is becoming more than ever a matter of utilizing roughages. The experience of feeders and the result of experiments conducted by the Iowa Agricultural Experiment Station show that by the use of corn silage, an otherwise wasted roughage, larger gains are produced, cost of feed bills reduced and the stock carrying capacity of farms increased. Probably no other one feed is of such economic importance for all classes of stock. For the most economical results silage should form the principal part of the ration for the beef-breeding herd. With its use the cows, especially if carried through the winter dry, can be fed practically as cheap during the winter as during the summer months.

BY USE OF CORN ENSILAGE OR OTHERWISE WASTED ROUGHAGE, COST OF FEED BILLS IS REDUCED.

For dry cows a ration of about thirty pounds of ensilage, four to five pounds of legume hay and the run of a straw stack and stalk fields will not only carry them through the winter in good condition but keep them gaining consistently. Many breeders substitute one to one and one-half pounds of cottonseed meal or other protein supplement per head daily for the clover or alfalfa hay, while a few have reported good results without the use of either a supplement or legume hay. In the majority of cases, however, it will prove profitable to add protein to the silage and straw ration.

If cows are suckling calves, grain should be added to the ration of silage and clover or alfalfa for best results A few pounds of corn and one to one and one-half pounds of cottonseed meal or oil meal makes a good ration for such cows.

Breeders have reported that by the use of silage the cost of wintering cows has been cut down one-third to one-half. Results at Walnut Ridge Farm, 1913-1914, showed a food cost, including summer pasture, of less than $27 per cow.

Uniformly good results have been obtained by a limited use of silage in the ration of the breeding bull. The succulence and palatability of the feed supplies that which is generally most lacking in his ration during the larger part of the year. The amount of grain used will depend entirely on the condition of the bull, the amount of exercise received, and the nature of the roughage fed with the silage.

After weaning the ration for beef calves will depend largely on whether they are to be kept for the breeding herd or finished as baby beef. For the breeding herd they should be fed a ration containing a generous amount of alfalfa or clover hay or other protein supplement. If intended for baby beef production the ration may contain a greater proportion of corn. In either case for best results they should be grained through the first winter.

Breeding heifers coming two years old should do well on a ration of twenty pounds of silage and six to eight pounds of clover or alfalfa and the run of stalk fields and straw stack.

Not the least advantage of silage lies in the fact that as a summer feed for both the breeding herd and young cattle it forms an excellent supplement to the failing pastures during "fly time" and eliminates the usual loss of thrift and weight during this period.

The chief value of silage in the fattening ration lies in the fact that the ration is not only cheapened but it helps produce larger gains. Cattle attain a higher finish in the same feeding period by its use and ordinarily outsell the cattle fed on a dry ration.

Using a familiar expression of one Iowa feeder: "The silage feeder can buy steers higher, sell them lower and still make more money than the man who does not have a silo."

FOR MOST ECONOMICAL RESULTS SILAGE SHOULD FORM THE PRINCIPAL PART OF THE RATION FOR THE BREEDING HERD.

Silage is without a peer as a roughage for use in short feeding. Compared with alfalfa and clover, cheaper gains are produced with silage. The silage cattle make higher gains and the fact that they outsell the cattle from other lots testifies to their superior finish.

Results seem to indicate that a small amount of dry roughage, such as a couple of pounds of legume hay, oat straw or corn stover, is a valuable addition to a ration of silage, corn and supplement.

For a longer feeding period it has proven advisable to limit the silage ration and increase the grain feed

somewhat toward the end of the feeding period. The great advantage of silage in starting cattle is that it can be used freely with little danger of "throwing cattle off feed." The old feeding adage, "Make your feed a little better than your cattle," applies to the use of silage as with other methods of feeding.

The amount of corn to feed with silage has been a question that has been worked out but little heretofore, although there has been a great deal of discussion regarding the percentage of corn that could be used most profitably.

In a 120-day feeding trial with 1,000-pound cattle recently completed by the Iowa Agricultural Experiment Station five rations were used. One lot received seventeen pounds of corn daily along with thirty-one pounds of ensilage, two pounds of oil meal and about two pounds of alfalfa. These steers made an average daily gain of 2.98 pounds and this was made at a cost of $9.49 per 100 pounds. Another lot received only twelve pounds of corn daily and forty pounds of ensilage, together with the same amount of oil meal and alfalfa fed the first lot. These gained 2.8 pounds per head daily and the increase was made at a cost of $9.13 per hundred. A third lot received only 8.6 pounds of corn daily, but their ensilage was increased to fifty-one pounds and in addition they were fed the same amount of oil meal and alfalfa as was consumed by the other lots. Strange as it may seem, these steers made an average daily gain of 3.02 pounds and this was made at a cost of $7.67 per 100 pounds. Even when their corn was cut down to 4.3 pounds daily, this being fed in conjunction with fifty-four pounds of ensilage, two pounds of oil meal and about two pounds of alfalfa, the gains still ran over two and one-half pounds per head daily, the exact gain being 2.56 pounds. The cost of making gains on this lot was $7.45 per 100 pounds.

At the close of the experiment the steers were valued by an expert and it was found that the difference between the lots was very slight. The steers fed at the rate of seventeen pounds of corn daily were valued at $8.25 per hundred, while the steers fed only twelve pounds of corn daily were valued at $8.83 per hundred. The steers fed 8.6 pounds of corn daily were valued at $8.70 per 100 pounds and those that received the small ration of 4.3 pounds daily per head were valued at $8.85 per 100 pounds.

Improving Farm Butter.

The adoption of more careful methods of handling milk and cream and improved practices in the making of farm butter will reduce rather than increase the trouble incident to home production of this food, say dairy specialists of the U. S. Department of Agriculture, and will result in a superior product which can be sold more easily and for a better price than the average farm butter. Last year about 30,000,000 pounds of butter, much of which originated on the farm, was washed or renovated because it was of such poor quality that it could not be profitably offered on the regular butter markets.

Cream alone should be churned. It may be skimmed as soon as it rises, or may be separated by a mechanical separator. The latter plan is the more efficient, and, though requiring a considerable initial outlay, often will be profitable. The cream should be set aside in a clean place by separate milkings. A temperature of 50 degrees Fahrenheit, or lower, should be maintained until from twelve to eighteen hours before churning time, when the various batches should be stirred together well and brought to a temperature of about 70 degrees Fahrenheit by placing the container in a bucket of warm water. One of the first acts of the farm housewife, who decides to adopt improved methods, should be to purchase a dairy thermometer. Temperatures play an important part in the development of flavors in butter, and always should be determined with fair accuracy. After the cream is mixed it should be kept at approximately 70 degrees Fahrenheit until just before churning time, when it should be reduced to about 58 degrees Fahrenheit where this is possible (or to such temperature not above 65 degrees Fahrenheit as to complete the operation of churning within twenty-five or thirty minutes).

The barrel type has been found by dairy specialists to be one of the most satisfactory churns. The dasher or plunger type requires a somewhat greater expenditure of labor. Earthenware churns are especially undesirable unless perfectly glazed, since, if pores are exposed, they absorb milk and cream which later decay. Churns with mechanical devices inside them are difficult to clean and sometimes injure the body of the butter.

The churn should be scalded preparatory to churning, but should be cooled with water before the cream is placed inside. The cream should be poured in through a coarse strainer. Every few minutes during the early part of the churning, gas should be allowed to escape from the churn. If the temperature is right the churning should require about twenty-five or thirty minutes. The process is completed when the granules of butter are about the size of large wheat kernels. The buttermilk should then be drained off and the butter granules repeatedly washed with cold water while still in the churn. The washings should be continued until all milk is removed. Under no circumstances should working be depended on to remove surplus milk.

When the butter is free from all milk it should be taken from the churn with a paddle and placed on a worker. The hands should never touch the butter, both on account of sanitary reasons and because the body warmth may melt the fat. The working should be done carefully, to avoid making the butter greasy. Before the butter is worked, fine salt should be added at the rate of about an ounce per pound of fat.

The butter should be prepared for market in a rectangular mold, since, when in this shape, the product is more easily wrapped and handled and is more pleasing to customers. Regular parchment butter-wrapping paper should be used around the prints, as ordinary waxed paper tears easily and sticks to the butter. The placing of the wrapped prints in pasteboard boxes is a desirable final step, as it protects the package, gives it a better appearance, and permits the use of the maker's name or trade-mark as an advertisement.

After the butter-making operations are completed, the churn should be rinsed carefully with warm water. It should then be scrubbed with hot water, cleansing powder and a fiber brush, and finally should be scalded and set in a clean, sunny place to drain and dry.

Purchase in the United States of refrigerating equipment to the value of $30,000,000, to conserve and develop, along economic lines, the fresh beef and dairy industry of Russia, has been authorized by the Russian-American Conservation and Industrial Stock Company, backed by the Russian government.

What Keeps Your Car Alive?

Without electricity your motor-car would be absolutely lifeless.
Electricity starts the engine.
Electricity keeps it going, by exploding the gas in the cylinders.
Electricity lights your lamps at night.
So if you don't want a *dead* car, be sure you have a *live* battery.

A Battery's Life Depends on the Care it Gets

Keep it filled with *pure* water, test it regularly with a Willard Hydrometer. See that it is fully charged. If you need repairs, ask your car dealer to put you in touch with the nearest Willard Service Station, where you can depend on reliable work by trained battery experts.

Write for the Battery Health Books

These are free. They give you good pointers about battery care and the causes of battery troubles. Address our Cleveland office. Hundreds of thousands of these books have been issued for the protection of battery owners.

Get a Good Battery to Start With

Be on the safe side and follow the example of over four-fifths of the builders of motor cars, who use Willard Batteries as regular equipment. Over a million Willards are in use.

Willard Batteries are for sale by dealers, garages, and all Willard Service Stations and Factory Branches.

Have You a Willard Hydrometer?

If not, write us enclosing a dollar bill and we'll mail one to you postpaid, with full instructions on how to use it. It tells you the condition of your battery's charge—a matter of vital importance

ROCK ISLAND FARM

Learn How to Get 10 More Bushels to the Acre! Get the Book

IT is a book *just off the press—free* for your name and address on a post card. A book packed with *facts* about an *improved* line of farm implements—and the results reaped by their users—a line that is the result of 62 years of *constant betterment* of farm implements. Users of

Rock Island Farm Tools

know that *improved* farm implements mean better crops, better *net* farm profits, *less* farm drudgery. Sold by dealers everywhere, are recommended by farmers everywhere. The name "Rock Island" has meant *better* farm tools ever since 1855, and it stands for the best farm implements today. Get the book and get the facts. Post yourself before you purchase your farm tools.

Rock Island "CTX" Plow

This is the plow of which Thad. E. Mendenhall, Fairbury, Nebr., writes: "I got 10 bushels more corn per acre on land plowed with 'CTX' gang plow than I got on the same kind of land, right side by side, plowed with other make of plow." One reason for this increased yield is that the "CTX" bottom turns the furrow slice clear over and lays it absolutely flat on the subsoil. No air spaces here to choke off the subsoil moisture.

Front Furrow Wheel Lift

Rock Island Tractor Plows

Furnished with 2, 3, or 4 bottoms. The plow with the Front Furrow Wheel Lift. Power obtained from wheel running in bottom of furrow—*always on solid ground*. No slipping. Exceptionally high and level lift. Self-leveling bottoms go in and out of ground point first. High Arched Beams easily clear themselves of trash. No clogging. Even depth plowing assured. Plows are heavily braced, extra strong and durable. The most easily operated.

Great Western Manure Spreader

The ideal low-down spreader, with wheels *under* the load. Noted for its indestructible front end, that *won't* pull out. Built to last a lifetime. Find out *why* the Great Western has 60 per cent more strength, does 60 per cent better and needs 60 per cent less repairs than the average. Get the book and get the facts. Over 125,000 in use.

Rock Island Corn Planter

noted because of its *accuracy* of drop, with the most positive and durable Automatic Clutch ever placed on a planter. Equipped with Friction Reel and simple, easily attached and easily adjusted Fertilizer Attachment.

Recognition For Badger Farmers

The Wisconsin College of Agriculture Gives Special Honors to Three of the State's Well-Known Leaders in Agricultural Lines.

THE three Badger farmers chosen by the Wisconsin College of Agriculture for special recognition this year are John Quincy Emery, Albion, Dane county; Henry Krumrey, Plymouth, Sheboygan county; Joseph Gordon, Mineral Point, Iowa county.

These three men are already quite well known to readers of The Wisconsin Farmer. Mr. Emery served twelve years and two and a half months as Wisconsin dairy and food commissioner, and in that time commanded a position in this line of work second to no dairyman in the country. He was appointed to this position in 1902 by Senator (at that time governor) LaFollette, and was reappointed by LaFollette, Davidson and McGovern for six consecutive terms. In 1908 he was named president of the National Association of State Dairy and Food Commissioners. Mr. Emery is a Badger pioneer, having been brought to this state when a child and settled in Dane county, near Stoughton, when Wisconsin was only a territory. The old homestead was built up on government land. Emery received a common school education in the schools of early days, and graduated from Albion academy and later from Normal, in 1866, with degree of Ph. B. His early work was as an educator. He was county superintendent of the eastern part of Dane county, later was county superintendent of Wood county, and then principal of the Fort Atkinson High School from 1873 to 1889. He was president of the Wisconsin State Teachers' Association one year, and three years a member of the educational board to give examination for state certificates. In 1882 he received an honorary degree from Beloit College, and in 1893 he retired from teaching to his 244-acre farm near Albion, Dane county. In 1894 Mr. Emery was elected state superintendent of public instruction and in 1896 he was re-elected. Mr. Emery has served as a member of the University Board of Regents, the Board of Regents for state normal schools, the Wisconsin Free Library Commission, the Wisconsin Geological Survey, and in other important agricultural and educational positions. He was one of the charter members of the Wisconsin Live Stock Breeders' Association. He first recommended the addition of agricultural, manual training and domestic science courses in the public schools. He was also a consistent worker for the Wisconsin College of Agriculture, aiding in many ways in securing adequate appropriations for carrying on the work of the college and the dairy school. In the twelve years that Mr. Emery was dairy and food commissioner he did a great amount of work for better legislation for the dairy farmer, and his share in making Wisconsin the first dairy state was by no means a small one. Mr. Emery not only urged better farming in Wisconsin, but practiced it on his farm near Albion. He erected the first silo in a neighborhood which now has few barns without the silo close by. He practiced crop rotation, used all the farm manures to good advantage, and raised pure-bred Jersey cattle. He was popular with the creamery and cheese men of the state, because he was a harmonizer and settled almost everything "out of court."

Henry Krumrey's main claim to state-wide recognition is his connection with the largest co-operative cheese-marketing enterprise in the entire country. Mr. Krumrey has enjoyed honors as a public servant, having represented his district in both branches of the legislature and served as state chairman of his party. But he performed his most conspicuous service when he inaugurated a fight against the cheese boards, and led Sheboygan county farmers in an enterprise through which they handle their own marketing problems. A man with less initiative would never have been able to accomplish what Mr. Krumrey did. It is not necessary for The Wisconsin Farmer to describe again the operation of the Sheboygan County Cheese Federation plant, which was treated at some length in these columns only a few weeks ago. Like Emery, Mr. Krumrey is one of the old-timers of Wisconsin. He was born in the town of Plymouth, Sheboygan county, in a log cabin, in 1852, and he still resides in the same town. He was the son of Carl Krumrey, German refugee of the revolution of 1848. The father settled in Sheboygan county in 1849. The son took charge of this farm in 1872, and he has the distinction of having lived on the same farm for sixty-four years. This farm all but twenty acres was sold last March.

It was fitting that the college of agriculture recognized Joe Gordon, so well known as a producer and judge of good hogs. In 1896 he raised the champion hog of America, a Poland China boar, and this victory at the International satisfied a life-long ambition. Joe Gordon used to say, "I would rather raise the champion hog of America than be president of the United States." Not only as a breeder did Mr. Gordon attain prominence, but he was for many years counted one of the very best judges of show hogs in the entire country. He was seldom criticized as a judge. He had the happy faculty of satisfying the losers as well as the winners, and this was due to the f ct that those who entered the ring understood perfectly well that Joe Gordon knew his business and conducted his judging absolutely on the square.

The three men named make conspicuous additions to the honor roll of the Wisconsin College of Agriculture and there was general satisfaction Farmers' Week because of the selections which ad been made.

RECEIVE HONORS FARMERS' WEEK

1—Joseph Gordon, Iowa county; 2—J. Q. Emery, Dane county; 3—Henry Krumrey, Sheboygan county.

The charter list of the Oneida County Grange Federal Farm Loan Association was closed January 27th at Rhinelander with twenty-three members applying for $35,300 in loans and the following directors were elected: C. B. Howe, Emil Hack, O. H. McLaughlin, Ed Wauple, Thomas Leith, W. P. Jewell and Peter Christianson. The officers are: President, C. B. Howe; vice president, O. H. McLaughlin; secretary and treasurer, John F. Wilde. Charter has been applied for from the federal land bank at St. Paul. This is believed to be the first Wisconsin application under the new federal farm loan law.

The One Sure Cure For All Galled Necks —Sore Shoulders

Seven years hardest tests prove *this* collar the *one* sure cure—preventive of all collar troubles that lay up your horses and waste your time and money. No pads are ever needed, yet the

Scotch Knocker

Horse Collar fits right into the hollows of the horse's shoulders. Made to hold its shape through years of hardest wear. Only finest 7-oz. *bark-tanned* leather used. All this is guaranteed.

Ensilage in Ration Lowers Cost.

Experiments Prove That Ensilage Has Cut Down Feeding Costs and Kept Animals in Prime Condition.

WHEN figures climb up into the millions they generally become confusing, save only in those instances when we are trying to arrive at comparisons. When we are told, for example, that there are 24,000,000 beef and dairy cattle in the ten grain-belt states, this statement is more or less bewildering. On the other hand, when we find that all the dairy and beef cattle outside of the ten grain-belt states only amount to 37,000,000 head we then begin to realize what an important part the central West plays in the production of beef and dairy products. The total number of beef and dairy cattle has been increased at a gratifying rate

A POPULAR TYPE OF SILO IN THE GRAIN BELT.

during the last few years, and there are today something like 2,000,000 head more in the United States than there were a year ago. We are apparently finding out that the handling of live stock is a basic industry intimately associated with the maintenance of the soil for crop production. True it is that the benefit that comes to the soil from the policy of feeding

ABSOLUTELY SAFE FROM FIRES AND STORM DAMAGE.

grain and roughage is secondary and interest in live stock husbandry cannot be maintained unless the industry, as a whole, shows a profit. To this end the methods we employ in the feeding of our dairy and beef herds have much to do with the status of the whole industry.

In this connection we may turn with much hope to the available records that have been made in feeding methods since the introduction of the silo, which has meant the use of products that have been largely wasted in the past. The conversion of the stalks and leaves of the corn crop into a palatable form of roughage to use during the winter months has proven to be a great boon to those engaged in dairying, as well as those who carry on beef production. Where accurate records have been kept, in the instance of a beef herd during winter months, it has been found that a grade herd comprised of approximately 100 animals was carried through the winter of 1913-1914 at an average daily cost of 7.89 cents per head. In this case each animal consumed daily thirteen and one-half pounds of ensilage, four pounds of alfalfa hay and five and three-fourths pounds of clover and timothy hay. In addition, a small allowance was made for the cornstalks used during the winter months, and for grazing in the meadow. With this ration the cost of carrying an animal from November 21st to April 6th was $10.73. This data has been secured from the Iowa Agricultural College, and corroborative evidence has been obtained by the Iowa Beef Producers' Association. During the winter of 1914-1915 the same herd was carried at a cost of 6.3 cents daily per head, and in that case each animal consumed sixteen and one-half pounds of ensilage, five pounds of alfalfa hay and, in addition, allowance was made for the pasturing of cornstalks and meadow. The total cost from November 22d to April 20th was $9.44 per animal. The following year, from November 21, 1915, to May 16, 1916, the daily cost of maintaining this herd was 7.11 cents and in this case twelve pounds of ensilage, seven pounds of alfalfa hay and three and three-fourths pounds of old timothy hay was fed daily. They also had access to cornstalks and to an old pasture. The average for the third winter was 7.10 cents per day, amounting, on the average, to $10.89 per animal. In arriving at these results corn silage was esti-

$1150 F. o. b. Racine
For Mitchell Junior—120-inch Wheelbase

Mitchell SIXES

$1460 F. o. b. Racine
For 7-Pass. Mitchell—127-inch Wheelbase

$1150 Model Also Now On Show

See the New Mitchell Junior With Hundreds of Mitchell Extras

Now we invite you to see Mitchell Junior. A somewhat smaller Mitchell—a $310 lower price than the 7-passenger Mitchell. But with generous size and ample power for a 5-passenger car. And with all the exclusive Mitchell attractions, due to John W. Bate.

Another step in Mitchell efficiency appears in the new Mitchell Junior. We urge you to come and see it.

A 7-passenger car, to have ample power and ample room, can't be smaller than the $1460 Mitchell, which has won for itself one of the envied places in the motor world. But 40 horsepower is enough for a 5-passenger car. And a 120-inch wheelbase gives room enough—more than most cars give.

So the Mitchell factory this year also brings out Mitchell Junior. Not a new type—simply a size reduction. So a man who buys a Mitchell can get the size he wants.

Thousands of these new cars have been run for months, on every sort of road. And they have proved themselves as perfect as the 7-passenger Mitchell car itself.

See the New Extras

In both Mitchell models there are hundreds of extra features. They give you at least 20 per cent extra value over any other car in this class.

These extras—most of them exclusive to Mitchells—are paid for by factory savings. They are the result of efficiency methods, applied by John W. Bate.

This great efficiency engineer built and equipped this whole plant. Every method and machine is adapted to producing this car economically. These methods have cut our factory cost in two. Nowhere else is a car of this class built anywhere near so low.

You will be amazed to see how many extras these new-day methods pay for.

Double-Strong Parts

One result is the Mitchell standard of 100 per cent over-strength. That is, every vital part is twice as strong as need be.

The Mitchell standard used to be 50 per cent over-strength. That itself was extreme. The Mitchell car has always been a marvel of endurance.

But, in the past two years, we have doubled this standard to give you a lifetime car. That fact is announced for the first time in the models now on show.

Over 440 parts are built of toughened steel. All parts which get a major strain are built of Chrome-Vanadium, and built oversize. We pay for steels in the Mitchell as high as 15 cents per pound.

31 Unique Features

There are also 31 extra features in Mitchells. That is, features which nearly all cars omit. Things like a power tire pump, reversible headlights, ball-bearing steering gear and never-broken springs.

These extras alone, on this year's output, will cost over $4,000,000. But all are paid for by these factory savings.

Many New Luxuries

Our new body plant gives us for this year another enormous saving. All Mitchell bodies, open and enclosed, will be built in our own shops.

This saving enables us to add 24 per cent to the cost of finish, upholstery and trimmings. The finish coats are now heat-fixed. A rare-grade leather is employed. A hundred new touches make today's Mitchell the handsomest car in its class.

Every Mitchell extra is something that you want. Nearly all are things you don't find in other like-class cars. They are things which can't be given without added price, save under Mitchell methods. Go and see them. Judge for yourself what they mean to you. And see which size you like best.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

TWO SIZES

Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.
Price $1460, f. o. b. Racine

Mitchell Junior a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.
Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

All You Want to Know About Electricity On the Farm

How can I get electric light in my house
How can I put in an electric bell
How can we get reliable telephone service on our farm
How can I put up a telephone
What is a horsepower in electricity
How can I cook and wash by electricity

These and many other questions concerning the farmer are answered, with illustrations, in the Farmer's Electrical Handbook, which will be sent to you free.

mated at $4 per ton and alfalfa hay at $10 per ton.

Turning now to a comparison between the cost of a ration containing ensilage and one that does not, we find

CORN SILAGE CUTS DOWN FEED COSTS.

in the records of the Iowa Beef Producers' Association where seventeen pounds of ensilage was fed daily to each animal along with three and one-half pounds of clover hay and ten pounds of oat straw, the cost daily per animal was 7.49 cents, whereas similar animals fed fifteen pounds of clover hay and three pounds of corn were carried through the winter at a daily cost of 11.28 cents per head. The former gained 1.07 pounds per head daily, while the latter made a gain of practically one-half pound daily per head. It cost $7 more in this case to carry an animal from November 1st to May 1st on a dry ration than it did when ensilage was fed. Every instance investigated by the Beef Producers' Association revealed the fact that, in wintering a beef herd, ensilage lowered the daily cost and increased the gains. This means that those who have silos and who handle their herd in a sensible way are no longer following the policy of wintering the beef herd at an out-and-out loss. Young heifers and steers can be made to gain approximately a pound a day with practically no grain when they are fed a liberal ration of good ensilage in conjunction with alfalfa and clover hay. Animals so handled go on the grass in the spring in the best of condition, and as they have not been burned out with corn during the winter months, they will make much better use of grass without grain than will be the case if the other policy is pursued.

Then there is the matter of healthfulness of the herds, which unquestionably is an important matter. Ensilage means summer conditions during the winter months, and the succulent feed it supplies means rapid growth of young animals, and, furthermore, it means that breeding animals are maintained in a condition that is much more natural than would be the case where considerable grain is fed to keep the animals in good flesh.

Sensible Feeding of Ensilage.

Allowance Must Be Made For the Needs of Each Particular Animal in the Herd When Ensilage Is Fed—By Raymond Fritz.

FEEDING ensilage to dairy cows requires more judgment, I think, than feeding beef cattle. At first dairy cows are stall fed, while beef cattle are mostly fed in a lot out of a feed bunk. You read many methods of feeding—so many pounds of ensilage, so many pounds of hay and corn stover. This is all right, but who has a herd of milk cows that will all eat alike of one feed? Some cows like more silage than others, while others leave the silage and wait for clover hay and corn stover or let the silage be doped with the grain ration before they start to eat. My experience is not to get the idea that each cow must eat a certain number of pounds of ensilage and if she doesn't there is something the matter with her. The better way is to watch which cow eats readily and give her an extra tip. Also watch the cow that waits for the grain ration, for she has just as good an appetite as the one that eats readily, but she has been overfed and doesn't like the taste. Feed her lightly until she is back on feed again. If she doesn't consume a larger amount, don't feed any more than what is cleaned up, and leave her looking for more. She really don't want any more, but has a craving for it and if given more will just nose around in it and let it alone. This cow needs to be fed a little heavier grain ration than the other and will respond to the milk pail if given.

Here are a few don'ts about ensilage: Don't feed frozen ensilage. A cow can thaw it out, but you can thaw it cheaper. Keep the outside edge lower than the middle. Take all frozen ensilage and use it as a cover for the next time feeding. Use from one-half, then the other, throwing the frozen from one side to the other, and use as a cover when you have enough taken off.

Don't feed too much ensilage, that is, so much that they let it lie or refuse to eat anything else. Make them clean it up. It is easier for you to let the cow clean out the feed box than to do it yourself after she has had as much as she wants. Such a method is very wasteful.

Don't overfeed because your silo catalog says thirty or forty pounds of silage a day, for the cows won't eat it and clover hay and a grain ration. Experience is the best teacher. A person could write until he could not see and the other fellow could read until he went to sleep and wake up the next morning and go on feeding the same wasteful and unprofitable way if he did not watch each cow and see that she cleaned up her feed properly.

SILOS USUALLY GO HAND IN HAND WITH PROSPERITY.

Don't feed too little—that is more unprofitable than the other way.

Mr. Alfred Wenz, of Aberdeen, South Dakota, in an address Farmers' Week said that he had been using Golden Glow corn both in the crib and silo for several years. He said that Golden Glow is used quite extensively in the southern part of Dakota. Mr. Wenz complimented the workers in the Wisconsin Experiment Association for their co-operative efforts in breeding such a good corn in this state. As fast as Wisconsin can develop something choice in the seed grade line, he says, the people of Dakota and other western states want to get hold of it.

Cow Testers in Annual Convention

Men Who Are Keeping Records on Over 25,000 Dairy Cows in This State Meet and Talk Show During Farmers' Week.

WHAT cow-testing associations can and cannot do, what the associations have done and what they consider best to do in the coming year was thoroughly discussed during the meeting of the testers, officers and members Farmers' Week. There is no longer a question as to the success that accompanies the formation of testing associations. The big question is in regard to the best methods to be used to get the most out of organizations now in existence and constantly being formed. For this reason the program this year included many and varied subjects, all, however, closely related to the main issue—making Wisconsin's dairy production more profitable.

Co-operative feed buying came in for a good deal of attention and some interesting results were mentioned. Members of the various associations, realizing the value of proper feed in the success of the dairy end of farming, are not slow to see the advantages of the co-operative purchases of such feed. In all cases the plan has resulted in saving the members considerable money and assured them of getting the proper feeds necessary for high production. Where the local dealer has not been willing to do this buying for the members in carload lots the testers have found legitimate means of overcoming this difficulty.

Herd record books and the right way of working up data for these was treated at length, the testers taking great interest in the details of the systems advised. Annual reports and the use of the association ledgers were discussed in the same way, all present joining in the discussion with an interest that pointed towards solid knowledge of the work and an enthusiasm that goes a long way towards making a success and failure of any undertaking.

C. E. Lee, assistant dairy and food commissioner of Wisconsin, gave an excellent talk on clean dairy products. He went into considerable detail regarding the work of his department in keeping up the standard of the state's dairy products. He also gave the testers some good advise in the way and manner in which they can assist the department in getting after the unscrupulous producer, both on the farm and in the factory. According to Mr. Lee, an increase is always possible even after the limit seems to have been reached by a section. As evidence he quoted the figures for Barron county, where in 1909 the total value of dairy products was figured in round numbers as $600,000 and people in general believed this county had reached the limit in production. Results, however, show that the limit has not been reached even now, though the production for 1916 was conservatively estimated as $1,100,000. This, in the opinion of Mr. Lee, shows that the interest for the coming year will be even greater than during the period just finished. But the farmers must be shown that better methods bring these results or otherwise the farmer cannot be blamed for not entering all such associations without considerable misgivings. Mr. Lee urged particularly the following points as essential in the production of better dairy products: Good floors in the barn, plenty of space in the barn, light, ventilation and separate milk houses. Most of these things are required by law, but the prosecutions have been few because the officials realize that conditions cannot be changed without educating the dairymen to the provisions of the law.

"Feeding the Dairy Cow" was the subject that called forth a variety of opinions and a lively discussion from those that heard the talks on the subject by G. C. Humphrey and E. B. Hart, of the college of agriculture. Recent experiments in nutrition point towards revolutions in the ration theories that have prevailed until now. The work being done by these men covers a period of nearly ten years and is far from being completed. Professor Hart in summing up gives the definition of a balanced or complete ration as one that contains five essentials: Energy, proteins, ash, vitamines (growth-producing substances), mechanical features and little or no toxic substances. The different effects of rations of corn alone and wheat alone and the mixture of the two similar variations of other feeds in the rations is astounding. Judging the worth of a ration by its effect on the offspring, there is good proof that rations have still something of the mysterious about them.

Bull associations are closely related to the cow-testing association, and this fact being recognized by the United States Department of Agriculture, special men have been engaged in organizing bull clubs for the betterment of dairy stock throughout the United States. An interesting talk on this work was given by Joel Winkjer, of the United States Department of Agriculture. He went to considerable length in explaining the details that go to making an organization of this kind successful. As an illustration of the benefit possible through such associations he referred to an association located at Rolla, Iowa, where five good bulls under this plan took the place of nine inferior ones. The average price of the nine inferior ones was $81 a head, while the price of the five good ones was $240 each. Thus by co-operation the members were enabled to have the services of a first-class pure-bred sire whose dams were known to be the profit-making kind. Before the forming of the association everybody there had a bull, but no one had a bull that was of any real value to the owner. By dividing a certain number of good bulls among the members better calves and higher producing cows were obtained at an outlay of less money than was paid for the inferior sires.

N. A. Negley, who has charge of the cow-testing work in the state, brought out some good points in his address, "Increasing Production Through Cow-Testing Associations." He is alive to the needs of the work which is at present still in its infancy. But the advantages already apparent he mentioned with the conviction that once the full benefit of testing is realized all of Wisconsin's dairymen will want to have testing done either by associations or in some other form with the idea of finding out the profit each cow is making. According to Mr. Negley, the best judges of cows are deceived quite frequently as to the possibilities of an animal. He mentioned several cases where farmers wanted to sell heifers, but because the buyers did not offer a satisfactory price the animals were kept and included in the testing work the following season. As a result, the heifer that was to have been sold for $40 and went begging was found to have produced in the first six months of her lactation period a profit above feed of $52.96. Without a proper record of this heifer's work she might have been misjudged from the very beginning and sold for beef before the owner had realized her worth. The value of co-operative buying was also emphasized and the savings effected by wholesale buying proved by actual cases. Letters testifying the satisfaction with which farmers now talk of the associations were quoted. The greater knowledge of feedstuffs and the results of intelligent feeding as compared to the old methods of feeding were clearly evident from the letters.

As the work of the associations is so important the state which is the ultimate gainer from this work ought to support the work in financial and other ways so that at least half of Wisconsin's 1,800,000 cows can be put under test and the unprofitable producers culled out.

Scotland is suffering from too many deer. Hundreds of herds of deer are descending on farms and devouring the crops. Farmers and land agents reported these conditions at a recent meeting of the Scottish Chamber of Agriculture and demanded amendments to the game laws so that more deer could be shot and the food supplies increased. Nine million of Scotland's 19,000,000 acres are officially described as "mountain and heath grazing land." Of this more than 2,000,000 acres are deer forest proper, and on much of the rest deer compete with sheep and cattle for the pasture. One of the biggest sheep farmers in Scotland declared a nation less inured by tradition to the dominance of the great land owning families would long ago have demanded that deer be confined to the poor lands, and the better lands be used for crops and pasture.

Get a Powerful Tractor at a Popular Price

HERE is the tractor that any farmer can afford to own. Low in price, yet built right up to the highest ideals in powerful construction. A wonderful motor—and mounted so that it gives the fullest measure of its power in pull at the draw bar or on belt work. Simple construction—has only two-thirds of the parts used in most other tractors. Self-guiding in furrow. Low in upkeep cost, easy to operate. Backed by many years of manufacturing experience.

La Crosse HAPPY FARMER Tractor

Two models—Model "A" has won its way into popular favor by its really remarkable performance in the field and for general farm power purposes. "Seeing is believing" and doubters have been converted by seeing the tractor at work in their neighbors' fields, and then purchased *La Crosse HAPPY FARMER Tractors* in preference to other makes and types. From the hard, dry, tough virgin sod of Montana to the "squashy" rice fields of Arkansas, the *La Crosse HAPPY FARMER Model "A"* has made good. And it costs only $585.00 f. o. b. factory at La Crosse, Wis.

The *La Crosse HAPPY FARMER Model "B"* is our new and successful kerosene burning tractor of 12-24 h. p.; price only $735.00 f. o. b. factory. Equipped with twin-cylinder motor, *Hyatt Roller Bearings* throughout—our successful universal hitch. It is by far the lightest, simplest and most powerful tractor of its class. Contains many important original features which are fully described in our catalog. You'll buy a *La Crosse HAPPY FARMER Tractor*—or you'll wish you had. Write us and let us help you save money both on *first cost and upkeep, and on work.*

La Crosse HAPPY FARMER Tractor-Drawn implements embody the latest correct ideas and are carefully designed for both quality and service. Send for catalog. **Live Dealer Agents Wanted.**

Six Years' Ensilage Experience.

Good Results From Liberal Feeding, Fed in Accordance With the Out-of-Doors Plan—By J. W. Whitmer, Palo Alto County Iowa.

FROM experience I have learned a few things about feeding ensilage, but there are a great many more things I want to know. What I don't know but want to know will be the predominating feature of this article.

When we built our barn in 1904 a silo was an unthought-of proposition, so when we built the silo in 1910 we found that out-of-doors feeding was the most practical under the circumstances. This arrangement has been entirely satisfactory to us thus far, as very few winter days are so severe as to make outside feeding objectionable.

We feed ensilage both before and after milking, before in the evening and after in the morning. Tainted milk is an unknown thing to us. We believe it to be the result of ensilage odors in the barn at milking time.

We have, as a rule, about forty head of cattle, twelve milk cows and the rest young stock. Everything is fed twice a day, the cows being fed from twenty to thirty pounds daily, while the young stuff receives somewhat less. I have fed our cattle so much in one day that they would not clean it up. Judging by the amount they ate, I am of the opinion that there is no danger of overfeeding as long as plenty of hay and fodder or straw is supplied.

The cows receive, in addition to the ensilage and hay, one and one-half pounds of ground oats and rye and one pound of cottonseed meal, and enough sweet corn fodder so that from four to six pounds of corn is furnished to each cow. The rest of the cattle are wintered on ensilage, hay and what remains of the fodder after the cows have finished. We do not fatten cattle for market, but dispose of what we have to sell to near-by feeders.

Here is a hint that may help someone. Take a potato fork along to the silo and use it to dig the ensilage loose from the edges in cold weather. Keep the ensilage a little low around the outside and it will freeze less. For summer feeding, when ensilage spoils easily, we use a garden rake to get a uniform amount from the entire surface.

Now here are a few of the things I want to know. Will cane planted with corn make a good mixture for the silo? Does a ton of cane ensilage have as great an amount of feeding value as a ton of corn ensilage, supposing the water content to be the same in each case? Is it practical to plant soy beans with corn for the silo? Can a corn binder harvest a crop of that kind without choking down a great deal?

I would be glad to hear from anyone who can inform me regarding these matters.

A HOLLOW TILE SILO THAT WILL HOLD 350 TONS.

Nothing Mysterious About Fertilizers.

By R. J. H. DeLoach

In this day and time, while so much is being said on fertilizers, it is a good idea for us to pause and study the meaning of the word "fertilizers." Dr. Tait Butler of Memphis, Tennessee, one of the editors of Progressive Farmer, has recently given us some good information on this subject, and we take pleasure in passing it along to our readers.

Commercial fertilizers are any materials sold on the market, or that enter into commerce, which contain nitrogen, phosphorus or potassium, any one, two or all of them, in a form suitable for feeding the crops.

Such materials, or commercial fertilizers, may contain only one of these plant foods, such as nitrate of soda, which supplies only nitrogen; acid phosphate, which supplies only phosphorus; or muriate of potash, which supplies only potassium. Or a material may supply two plant foods, like fish scrap, tankage, etc., which supply nitrogen and phosphorus, or nitrate of potash, which supplies nitrogen and potassium. Then, again, many materials supply all three plant foods, such as cottonseed meal and the so-called ready-mixed complete fertilizers.

There is much yet unknown about fertilizers, soil fertility and plant growth, but there are no secrets or secret methods known by one manufacturer or by one class of people which are not known by others. No mysterious combinations or proportions will produce the marvelous results claimed by some. The man who claims any mysterious or unusual effects for any fertilizer mixture, and offers a formula for sale, is a good man to leave alone. If he is not a fraud, he is at least ignorant of fertilizers.

Badger Pure-Bred Grain Show 1917.

J. R. Thorpe, Tavera, Wins Sweepstakes on Corn--Grain Show Was the Best Exhibit of Pure-Bred Seeds the State Has Seen.

CORN and the small grains were not represented in record numbers at the sixteenth annual grain show, held during Farmers' Week at the university, but the quality of the exhibits was far superior to anything ever exhibited at Wisconsin before. Prof. R. A. Moore, of the college of agriculture, who has had charge of the shows during the last ten years or more and who is directly responsible for a great many of the improved strains of grain in the state, gave it as his opinion that there never was as much quality shown at any show in the world as at the present one. Several years ago Wisconsin competed aganist the world at Columbia, Missouri, and won 75 per cent of the prizes with an exhibit not nearly the equal of this one. At that show thirty-six states, among which were the leading ones of this country, and several foreign countries were represented, but their best efforts were not of enough importance to give Wisconsin the least trouble.

The sweepstakes in the class for Silver King corn went to J. R. Thorpe, of Tavera, and it can be said to his credit that his ten-ear sample that turned the trick was about the most perfect lot of Silver King ears ever brought to any show. The big points that all breeders have been striving for in the improvement of Silver King were embodied in the selections shown by him. He also won the blue ribbon in the fifty-ear class for Silver King. Several other prizes came to him in the various classes, but the outstanding exhibit was the ten-ear sample of Silver King.

In the sheaf grain and grasses exhibit one part of the room was taken up with the unsuccessful entries of rye, wheat, barley, and the various clovers and alfalfa. Splendid specimens of Wisconsin's crops they were, but others were so much superior that the prizes were reserved for them. Wisconsin has done special work in the breeding of special strains of rye. This work began seventeen years ago and followed with extra zeal by the experiment station has shown conclusively the importance of careful selection and breeding for quality strains. It was with considerable pride, therefore, that Professor Moore pointed to the blue-ribboned sheaf and called attention to the weight and the development of the heads. According to Mr. Moore the average acre yield for the United States is in the neighborhood of twenty-two bushels, while this strain produces forty-six bushels to the acre. When one considers that little or no credit belongs to better methods of farming and the entire gain in production is the result of intelligent and unceasing effort on the part of a few men, this becomes the more wonderful. Professor Moore has directed this work and can be justly proud of the lead the improved strains of rye will enjoy in the future. If all grains could be made to produce double of their present amount, it would go a long ways toward solving the world's food problem.

In the small-grain department, samples of excellent wheat, oats, barley and rye were shown. Plump kernels and even color throughout made the exhibit an especially uniform one. There was close competition in the various classes, but the exhibitors were quick to see the superiority of the winners in most instances. An excellent representation of field peas and clover seeds was likewise there, and also timothy and alfalfa seed. The entire exhibit of small grains was of an extremely high grade and left no doubt in the mind of the visitor that Wisconsin will some day give the other states as hard a run to catch up with her in field crops as she is now showing them in dairying. When Professor Moore was asked about the acre yield of corn during last year he smiled, as he admitted that Iowa had surpassed Wisconsin in this respect by a small margin, but he ventured to say that the coming year Iowa would be left out of the running. When Wisconsin passes anyone she stays ahead, according to Mr. Moore, and the efforts that will be put forth during the coming season by Wisconsin farmers to lead the nation in production of corn per acre will not be without results. During the last years the Wisconsin farmers have sold to Iowa farmers more than $80,000 worth of seed corn. That is a lot of corn to buy for a large-producing state like Iowa.

The first award is each class of the show was as follows:

Ten Ears Silver King (Wisconsin No. 7) Corn, North Section—1st W. G. Jamison & Sons, Appleton.

Ten Ears Yellow Dent (Wisconsin No. 8) Corn, North Section—1st A. C. Feifarek, Peshtigo.

Ten Ears Golden Glow (Wisconsin No. 12) Corn, North Section—1st J. A. Hass, Ellison Bay.

Ten Ears Wisconsin No. 25 Corn, North Section—1st C. A. Correll, Crivitz.

Ten Ears Silver King (Wisconsin No. 7) Corn, South Section—1st Theron Thorpe, Travera.

Ten Ears Early Yellow Dent (Wisconsin No. 8) Corn, South Section—1st John Van Loon, La Crosse.

Ten Ears Golden Glow (Wisconsin No. 12) Corn, South Section—1st J. E. Brunker, Ridgeway.

Ten Ears Clark's Yellow Dent (Wisconsin No. 1) Corn, any part of state—1st Theron Thorpe, Tavera.

Ten Ears Murdock (Wisconsin No. 13) Corn, any part of state—1st Leo Brueckner, Jefferson.

Ten Ears 8-Rowed Red, Yellow or Smut-Nose Flint, any part of state—1st A. O. Popp, Jefferson.

Ten Ears 8-Rowed White Flint, any part of state—1st Anton Bohl, Beaver Dam.

Ten Ears Pop Corn, any part of state—1st Wm. Moos, Onalaska.

Single Ear Dent Corn, any part of state—1st Wm. Willinger, Galesville.

Fifty Ears Silver King (Wisconsin No. 7) Corn any part of state—1st J. R. Thorpe, Tavera.

Fifty Ears Golden Glow (Wisconsin No. 12) Corn any part of state—1st H. C. Brueckner, Jefferson.

Peck of Wisconsin Pedigree or Oderbrucker Barley—1st Anton G. Holzschich, South Kaukana.

Peck Two-Row Barley—1st H. T. Draheim, Gotham.

Peck Wisconsin Pedigree No. 1 Oats—1st Wm. Moos, Onalaska.

Peck Pedigree No. 5 or Swedish Select Oats (Wisconsin No. 4)—1st Chris Michelson, Hazelhurst.

Peck Sixty-Day or Kherson Oats—1st H. T. Draheim, Gotham.

Peck Any Other Variety of Oats—1st H. E. Krueger, Beaver Dam.

Peck Winter Wheat—1st Wm. H. Basse, West Allis.

Peck Spring Wheat—1st H. T. Draheim, Gotham.

Peck Wisconsin Pedigree Winter Rye—1st Ed Whitmore Wausau.

Peck Medium Red Clover Seed—1st Fay Bros., New Richmond.

Peck Mammoth Clover Seed—1st W. A. Graham, Fennimore.

Peck Alsike Clover Seed—1st Otto Wolf, La Crosse.

Peck Timothy Seed—1st A. N. Kelly, Mineral Point.

Peck Silver Hull Buckwheat—1st H. E. Krueger, Beaver Dam.

Peck Japanese Buckwheat—1st H. T. Draheim, Gotham.

Peck Black Soy Beans—1st Albert Dettman, Peshtigo.

Peck Yellow Soy Beans—1st A. O. Popp, Jefferson.

Peck Smooth or Wrinkled Peas—1st Herman Schoeneck, Enterprise.

Peck Green or Yellow Field Peas—1st Herman Schoeneck, Enterprise.

Sheaf Pedigree or Oderbrucker Barley—1st H. T. Draheim, Gotham.

Sheaf Two-Row Barley—1st H. T. Draheim, Gotham.

Sheaf Pedigree No. 1 Oats—1st Peter Dengel, La Crosse.

Sheaf Swedish Select or Any Other Variety Oats—1st Otto Wolf, La Crosse.

Sheaf Winter Wheat—1st Noyes Raessler, Beloit.

Sheaf Spring Wheat—1st J. L. Krause, Beaver Dam.

Sheaf Pedigree Rye—1st Ed Zum Brunnen, Monroe.

Bundle of Alfalfa—1st Swartz Bros., Waukesha.

Best Exhibit of Three Cuttings of Alfalfa—1st P. A. Paulson, Hudson.

Bundle of Red Clover—1st H. T. Draheim, Gotham.

Bundle of Alsike Clover—1st H. T. Draheim, Gotham.

Bundle of Timothy—1st H. T. Draheim, Gotham.

Bundle of Sudan Grass—1st H. T. Draheim, Gotham.

Bundle of Soy Beans—1st J. L. Krause, Beaver Dam.

HONORARY CLASSES.

Ten Ears Wisconsin No. 1 Clark's Yellow Dent—1st J. R. Thorpe, Tavera.

Ten Ears Wisconsin No. 7 Silver King Corn—1st J. R. Thorpe, Tavera.

Ten Ears Wisconsin No. 8 Early Yellow Dent Corn—1st Wm. Schwandt, New Richmond.

Ten Ears Wisconsin No. 12 Golden Glow Corn—1st J. R. Thorpe, Tavera.

Ten Ears Any Variety Eight-Rowed Flint Corn—1st Chas. Hewitt, Randolph.

Peck Pedigree or Oderbrucker Barley—1st Anton Bohl, Beaver Dam.

Peck Pedigree No. 1 Oats—1st H. T. Draheim, Gotham.

Peck Pedigree No. 5 or Swedish Select Oats—1st H. T. Draheim, Gotham.

Peck Winter Wheat—1st N. Raessler, Beloit.

Peck Spring Wheat—1st H. E. Krueger, Beaver Dam.

Peck Pedigree Rye—1st N. Raessler, Beloit.

SWEEPSTAKES CLASS.

Best Peck Spring Wheat—1st H. E. Krueger, Beaver Dam.

Best Peck Pedigree Rye—1st Ed Whitmore, Wausau.

Best Peck Wisconsin Pedigree No. 1 Oats—1st H. T. Draheim, Gotham.

Best Peck Wisconsin Pedigree No. 5 Oats—1st Chris. Michelson, Hazelhurst.

Best Peck Wisconsin Pedigree Barley—1st Anton C. Holzschich, South Kaukauna.

Best Ten Ears Silver King Corn of Entire Show—1st J. R. Thorpe, Tavera.

Best Ten Ears Yellow Dent Corn of Entire Show—1st Leo Brueckner, Jefferson.

Grand Champion Ten Ears Dent Corn of Entire Show—1st J. R. Thorpe, Tavera.

"FARM-WEAR" SHOES

IF you want to know how nice looking, well fitting and long lasting a shoe can be, try on a pair of "FARM-WEAR" shoes next time you're in town.

"FARM-WEAR" shoes are black and chocolate and are made especially for farm service. They are well made of solid leather over standard lasts and because of a special tannage this leather

NUNN MILWAUKEE SHOES BUSH

Resists Uric Acid

If you have ever worn leather shoes about the barn yard, you know what uric acid does to them. "FARM-WEAR" shoes are different—and more durable. There are no other shoes made like "FARM-WEAR."

If your dealer doesn't carry "FARM-WEAR" shoes, just fill out and mail us the coupon and your shoe problems will be settled for all time.

Big Money in Contract Ditching!

A Buckeye Traction Ditcher is a better proposition than a 75-acre farm and doesn't require nearly so large an investment. With it, you can keep busy 7 to 9 months during the year. Many men clear $15 to $20 a day and some a whole lot more. Your money is always good because you ditch for land owners.

Here is your opportunity! Almost every farm in your county has one or more wet fields. The aggregate amount of underdrainage necessary is enormous and thousands of dollars will be required to pay the bill. Get a

"A Perfect Trench at One Cut"

BUCKEYE Traction Ditcher

and obtain your share of this money. Others are doing it--you can too.

C. C. Mann, Washington C. H., Ohio, writes:
"I certainly think the Buckeye is O.K. or I would not have bought the sixth one. We can dig anywhere from 30 rods to 300 rods in 10 hours, all depends on the soil and depth, but consider 120 rods an average day's work, for which we will receive about $43.20 with about 5c per rod for expenses. We have had about all we can do the year around."

Ed Uvaas, Larsen, Wis., writes:
"I purchased one of your No. 1 tile ditching machines in April, 1915, and my gross earning from 84 days operation was $2200. I paid for help and supplies $278.00 and my repair bill amounted to $20.00 This left me $1902.00 for my own work and investment in the machine.

Ask for our free "Book of Facts." Describe soil conditions and size of ditches you wish to cut. We will tell you the machine best suited to your problem. If you aim to do contract work, our Service Department will help you get the business. Don't put this off--lets hear from you.

THE BUCKEYE TRACTION DITCHER CO.
1715 Crystal Ave. Findlay, O.

The Tractor You'll Buy When You See It Work

In our 51 years experience building implements for the farmers of America we have never put out a machine that met with such general and enthusiastic approval as the

Moline-Universal Tractor

The great demand for this tractor made necessary the erection of the largest tra or factory in the world, which is now in operation.

This proves that the Moline Universal meets the pressing need of American farmers for a practical machine that will take the place of horses.

You can rely upon this tractor for *All Field Work*, from preparing the seed bed to harvesting the crop—pulls the usual 5-horse load; gives you 10 to 12-H. P. for belt work. One man operates both implement and tractor.

Write us for illustrated literature and name of nearest Moline dealer.

Moline Plow Co., Dept. 30, Moline, Ill.

The Moline Line Includes
Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers, Manure Spreaders, Mowers, Plows (chilled and steel), Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Vehicles, Wagons.

Fruits and Garden

Manuring the Orchard.

If our fruit trees are to be continued in thrift and health fertilizers must be applied to the soil. It is easy to understand that a few years of root growth will exhaust the soil elements which are used not only to produce fruit but to continue the growth of trunk and branches.

There is nothing better to feed the trees than barnyard compost. And the finished product is not meant, but the coarse material. The winter is the proper time to apply this stimulant for several reasons. The material is more abundant then than in summer and labor is more plentiful and cheaper than at any other season. Also you get the manure in a place where it will do the most good possible when the spring rains arrive, for the leaching will be carried down to the roots just as growth begins, to the great and immediate help of the trees.

A proper dressing for the orchard, just the right quantity, will depend upon the age of the trees and their condition. If trees are large and have been neglected they will require more than in the case of young trees which have had attention. To begin at the beginning, young trees lately set in rich soil need no manure, but after eight or ten years, when they begin to produce and there is an evident decline in vitality, feeding should begin. The decline will be manifested by a slower growth and a poorer quality of fruit. At this stage perhaps two wheelbarrow loads will be sufficient for the first application. And this should not be piled up close about the tree, but be spread out upon a space as large as the top of the tree. It is not necessary to dig this manure into the soil. I leave it on the surface, well and evenly spread, so that it will retard weed growth and conserve moisture.

One great cause of the failure of our orchard trees is drouth and protection from this enemy should be kept in view in all our orchard work.

At the next stage of the trees' existence, they having attained the size of a stovepipe, double the quantity of manure should be given. But at the third stage, when trees have about reached maturity as big, perhaps, as a man's body, real starvation will have begun, especially if they have suffered from previous neglect.

It will be needful to watch the behavior of the orchard in its different periods of growth and apply fertilizers as required. The amounts stated for the various stages are not to be yearly applications. Once in three years is sufficient, or, if the soil is naturally poor, once in two years.

But when this system of feeding the trees has been adopted do not fall into the error of thinking that all needed care has been taken to secure good crops. The feeding must be coordinated with intelligent pruning and spraying. Neither one alone will secure the reward which you desire, but all together will bring results, the rejuvenation of your trees and the production of good-sized, well-colored fruit, free from fungoid and insect troubles and in quantities beyond your most sanguine expectations.

Onions and Cabbage.

The following communication has been received from a reader:

I live in the suburbs of a town of 7,000 people, where there seems to be always a good market for vegetables I have regular employment, but my two boys are stout and willing to work, and I want to set them to gardening. I can rent two acres of land close by, and I want to know which is best for me to grow—onions or cabbage. I don't want to scatter too much, and after planting one acre to potatoes, will take the rest for some one crop. Which would you advise?

We could give safer advice if you had stated the nature of your soil and its condition, whether very weedy or reasonably clean. Your chances for success depend quite a little upon that. If the soil is rich, but very foul, cabbage is the better risk because more easily cultivated than onions and requiring far less hand labor. In either event, whichever you decide to plant, start with a good application of manure. Of course, if it is actually new land the manure will not be needed, but it is not likely to be new land in your location.

Moderately low, moist land is better for either crop you name than high, dry land, but even if the soil is of the high-and-dry order we would not hesitate to plant either cabbage or onions if it is well enriched.

In considering the problem of vegetable growing the next thing after the soil question is settled is to take up the matter of comparative labor and its cost. And from the very nature of the crop onions will need twice the labor to bring to perfection that is needed for cabbage. The importance of that fact may be seen by assuming that an acre of cabbage will need thirty days' labor at $2 per day. Then the $60 more needed to secure the onion crop has quite an important bearing upon the question of final profit. The extra work is required because onions are low growing and must be weeded until they come to perfection, while the cabbage crop soon gets large enough to shade the ground and so prevent the growth of weeds. Also the cabbage may be planted three feet apart, giving plenty of room for culture with a horse, while the onions must be so close in the row that not even a hoe can be used and the rows so close that a small hand cultivator must be your dependence.

In the case of either crop a severe drouth would be so injurious as to shorten the yield, but perhaps the onions are a little more liable to injury from that cause than cabbage.

A fair average yield for onions may be placed at 30 bushels and for cabbage, say, 3,000 head. In the case of either crop you may possibly get a greater yield, but you are more likely to secure less than more.

These crops share in this advantage—they have poor keeping qualities. They are not standard crops like corn and wheat, which will keep from year to year, but are perishable and must be consumed within the twelvemonth.

In normal years, with average prices, the onion crop will sell for the most money, but the difference will not be so great after deducting the greater cost extra for growing. As a rule, the price of onions is more steady and has fewer fluctuations than that of cabbage. This is because in good seasons cabbage is so easily grown that a surplus is inevitable and sometimes it goes begging at a half cent per pound. Then again, owing to drouth, there is a real scarcity and the price mounts to 7 and 8 cents. In such times it is better to have cabbage to sell than onions. On the whole, if you are willing to give the labor and expense needed to secure a good crop we think you will do better with the onions. However, do not leave it all to the boys. An old head to manage and make sure that the right thing is done at the right time is needed.

Some Details of Potato Growing.

To the Editor:—I will give you my method of raising potatoes. My soil is heavy, sandy loam and I always try to have clover to plow under six or seven inches deep in the fall. In the spring if I have barnyard or stable manure to put on I spread it thin, then disk it in until there is a fine seed bed five or six inches deep, then smooth with a spring-tooth harrow.

The potatoes are first treated in a solution of formaldehyde and dried before planting. It is better if the potatoes are left to sprout before planting. I have been using formaldehyde, but this year I am going to try a solution of corrosive sublimate. I think that will be better, as it is stronger.

I use a two-man planter and plant

from May 20th to June 1st, and sometimes plant the Triumphs as late as June 15th, making the rows three feet apart and planting twenty inches apart in the rows.

Ten days or two weeks after planting I go over the field with a spike-tooth harrow, and again when the vines are pushing through the ground. Sometimes I go over the field with the harrow when the vines are three or four inches high, if the ground needs it.

After the rows show I cultivate three or four times, about a week apart, according to the weather. The first time run the cultivator close to the rows, but after that work a little farther away from the rows each time so as not to injure the roots, but I do not hill them. I also go over the field with a hoe and get out any weeds that may be in the rows, as weeds must be kept out if one wants a crop of potatoes.

When the potato bugs come I spray with Paris green and Bordeaux mixture together. Then in ten days or two weeks I spray again with Bordeaux mixture alone if there are no bugs. Spray all together about three times.

The past season was a poor one for potatoes, but the high price has helped to make up for it. Eric Mickelson.

Marinette Co., Wisconsin.

Concerning the Care of Bees.

Marathon County Farmer Says Bees Pay Well—Wisconsin a Good State for Bees and the Industry Is Growing Rapidly.

IT PAYS to "potter around" with bees. A farmer in Marathon county who knows how to handle bees profitably says in a letter to the state experiment station:

During the past five years my bees have paid at the rate of $5 an hour for the time I spent with them.

A combination of highly desirable conditions make Wisconsin exceptionally favorable as a region in which to maintain bees for profit. Coupled with the natural advantages of a long season of honey flow with nectar available from many kinds of plants, there are good markets and a constant demand for honey.

L. V. France, of Madison, son of N. E. France, Platteville, presents some interesting data relative to the growth of bee keeping in Wisconsin and its prospects for improvement. Mr. France has had early training in bee keeping on his father's well-known honey farm.

Mr. France divides the state into six sections, according to the present conditions in honey production. These differences are largely caused by factors of soil, climate and flora. These regions resolve themselves into the southern, the eastern, the northern, the Pierce, the Buffalo and the central sandy area. In the central region bee keeping is not as widely practiced, owing to the lack of favorable conditions. In the north scarcity of settlement and development are naturally the chief reason for the absence of bees on a large scale. Conditions are not unfavorable, however, and in time the industry in the north will probably advance rapidly.

White and alsike clover take first place in the list of plants that furnish nectar to the honey bee in Wisconsin. Walworth county is said to be the most ideal portion of the state in this respect, as clover begins to bloom there during the last week in May or early in June under ordinary conditions. The area represented by Brown and Kewaunee counties, where clover blooms, is often retarded by cold, damp weather. This year, as a whole, has not been normal from the standpoint of the beekeeper, because of the heavy rains and continued cloudy skies.

Sweet clover bloomed profusely in many places this year, and especially along country roads and in railroad embankments. Bees obtained much nectar from sweet clover as a result; in fact, depending upon it in a larger sense than usual. Basswood, willow, buckwheat, golden rod and asters are other sources of sweets for the insect confectioners. Earlier in the summer dandelion and fruit blossoms help to put the bees in good working trim for the clover "flow" or honey harvest.

In commenting upon the strains of Wisconsin bees, Mr. France says that hybrids of Italian and the common stock are prevalent, with a preponderance of the Italian. Few pure-bred Italian bees are kept here at present. The 1910 census gives 95,638 colonies of bees in Wisconsin, outside of the cities.

By far the larger number of beekeepers in Wisconsin belong to the "fifty-colony" class, and these men devote but a small share of their time to the care of the honey producers and know far less than they might about the profits that are possible with a little more study. At present there are not more than a dozen beekeepers with colonies exceeding 400 in number. Lack of proper information, and, sad but true, real ignorance and carelessness are the cause of great annual losses in the state apiaries.

Foul brood, winter loss and spring dwindle are the three fateful foes of bees in Wisconsin. To these may be attributed the heaviest share of the loss in the industry.

As an example of the destructive work of foul brood in some parts of the state Mr. France in his thesis points out that in Clark county fifteen years ago there were 1,000 colonies of bees to where there are but ten at present. On nearly every farm there were from fifty to 250 colonies, while at present five to thirty are the rule. This applies especially to the town of Greenwood. In Richland county some time ago foul brood swept away an entire apiary of 120 colonies in a short period.

Foul brood is a disease caused by bacteria. As it is likely to be carried from hive to hive by the bees themselves, its presence is particularly menacing. The feeding of one weak colony at the expense of a second stronger colony, a common practice in beekeeping, is, therefore, rendered dangerous and impracticable. Nine counties where the presence of foul brood is not established, but where its presence is suspected are Jefferson, Milwaukee, Ozaukee, Washington, Dodge, Sheboygan, Calumet, Manitowoc and Brown.

Successful wintering of bees in a state like Wisconsin presents some difficulties even as complex as those of fighting diseases. In the severe winter of 1892-93 it is estimated that 70 per cent of Badger bees were killed. The winter loss of 1911-12 was 30 per cent, that of 1912-13 about 10 per cent and for 1913-14 slightly above 8 per cent. Experienced beekeepers lower their annual losses from cold weather to approximately 5 per cent in this state, but only by dint of great care and attention to manifold details of the business little appreciated by the layman or amateur.

Spring loss or "spring dwindle" is a term applied to the number of colonies that die from the time of removal from the cellar to the opening of the clover blossom season. Honey robbing, cold weather and bad management all help to make the annual spring losses to bee colonies about 5 per cent. For 1914 the spring loss was 7.5 per cent.

Practical field suggestions as to ways in which state aid through the university and the legislature can be made to encourage the bee industry in Wisconsin were solicited from scores of practical beekeepers by Mr. France while preparing his thesis. A few of the representative hints to "the men at the helm" follow:

Investigations, experiments, selling queens at reasonable prices and finding better markets for Wisconsin honey.—Dane county.

By sending out a traveling adviser among the beekeepers, and by prohibiting the spraying of fruit trees during blossom time.—Dodge county.

By developing successful plans for wintering in this region. By publishing the experiences of beekeepers in different localities.—Douglas county.

By sending good literature to all beekeepers in the state on the care and management of bees.—Fond du Lac county.

Keep down the bee diseases and advocate less but better managed apiaries.—Iowa county.

Better appropriation and more inspectors.—Outagamie county.

To know bee diseases and the value of good honey and its uses.—Richland county.

By study of flowers adapted to honey production.—Sauk county.

ZELLER PRIZE WINNER SEED CORN
The best ever offered. The sensation at Ames Corn Show. Produced 189 bu to acre in 1914. 1st prize again this year. Only 6,000 bu. to sell. Selected from 35,000 bu. Properly dried, carefully tested and guaranteed. Several standard varieties. Get Free catalog today. Read about the wonderful corn. Order early. Get best selection for bumper crops.
ZELLER SEED CO., 402 McKinley St., Jefferson, Iowa

SEEDS Platte Valley Peerless—the Best Seeds Grown
I want you to have that kind. For 3c, to cover postage, I'll send you a packet of Western Giant Pansy, 10 sorts Spencer Sweet Peas and catalog. Write today. A. C. ANDERSON, Box 57 Columbus, Neb.

NORTHRUP, KING & CO.'S DEPENDABLE, TESTED SEEDS

DO you wish to cut down your household expenses this summer in the easiest way? Then plant a real garden that will keep you supplied all the season with delicious vegetables.

Whatever you raise depends largely on the seed you sow. Your valuable time and labor will bring the best returns only when you sow reliable seeds.

The STERLING Seed Boxes which are sent out fresh each year to dealers give you an opportunity to make a personal selection of the seeds best suited to your locality. They include the choice home garden varieties. The packets are large and contain dependable, tested seeds full of vitality. Easy-to-follow cultural directions printed on the back.

Make out your order now and take it to your dealer to be filled. He can procure for you, quickly, anything in the seed line which he may not have in stock—but be sure you get Northrup, King & Co.'s Seeds.

NORTHRUP, KING & CO., SEEDSMEN
Minneapolis, Minn.

Barley

Early ripening varieties. Salzer's Silver King has yielded 173 bu. per acre. Finest for malting and feeding. Northern Grown, pedigreed strains. Strong straw, big head, plump grain. Approved by Wisconsin and Minnesota Experimental Stations.

More Corn-Less Work

WITH DAISY CULTIVATOR SHIELDS

Put these famous REVOLVING SHIELDS on YOUR cultivator if you want to plow corn faster and better--save time and labor --grow more corn--make bigger profits. Most modern--BEST--cultivator shields on the market. 100,000 satisfied users. Enable you to plow ONE-FOURTH faster. Absolutely protect small corn from clods. Cannot clog or get out of adjustment.

INVESTIGATE NOW! Write for complete information on Daisy Shields. Send your dealer's name and we'll arrange to ship a pair for your inspection. Write

MUNSON MFG. CO.
118 E. Court, Winterset, Iowa

WARNING

Be careful of your seed grain next season. On account of weather conditions last summer much of the grain is weak and undeveloped and **not fit to plant.** Grade all your seed and plant only the clean, strong, well-developed kernels that will grow.

Owens "New Superior" Grain Grader and Separator

Grade Out the Wild Oats With an OWENS

Grade and clean your seed, and sow only plump, healthy, clean seed. The Owens insures that you will plant only the best. The quality and yield of your crop depend on the quality of your seed. Large healthy grains produce bigger yield and stand unfavorable weather better. An Owens also insures that you will not sow your fields with weed seeds, many of them so easy to get started and so hard to get rid of. The Owens Grain Grader and Cleaner is the dependable machine for northwestern crops. Thousands in use.

Save the Dockage

Average dockage on Minnesota wheat is nineteen ounces per bushel. Every fifty bushels you lose a bushel—which could be prevented by grading. Send for booklets.

How many shall we reserve for you? Remember these trees are strictly first-class in every way—kind you would pay 40c or 50c for to any tree agent. Cut out this advertisement and mail it with your order today!

GALLOWAY BROS. & CO., NURSERYMEN, BOX 32A WATERLOO, IOWA

Wisconsin Ag. Department Report

Review of Activities in Our Wisconsin Department of Agriculture For the First Biennial Period Under Secretary C. P. Norgord.

CITIZENS of the Badger state, especially live stock breeders, agriculturists and horticulturists will be impressed with the first biennial report of the Wisconsin Department of Agriculture, soon to be circulated. The report of C. P. Norgord, commissioner of agriculture, sets forth the following facts, among others:

Insect diseases cause an annual loss in Wisconsin of $25,000,000.

Bovine tuberculosis causes a loss of $25,000,000 annually in the United States, and decimates the human family.

San Jose scale caused a loss of $10,000,000 in California alone in one year.

The Gypsy moth caused a loss of $1,000,000 in eastern states in a single year.

The foot-and-mouth disease caused a loss of $140,000 in Wisconsin and in other states a loss of millions of dollars.

The bee and honey industry is ever threatened by American and European foul brood.

While we cannot be held responsible for insect and animal diseases now in Wisconsin, we are now responsible for an effective war against them. If they gain, we are to blame and by "we" I mean those charged with police and control work, and those who furnish the funds with which to carry on police and control work.

The report is especially strong with reference to bovine tuberculosis, and in this connection the accredited herd plan is carefully set forth as one effective means of ridding the state of bovine tuberculosis. Fifty herds are now listed in this class and 250 more are about to be added.

The commissioner calls attention to the fact that bovine tuberculosis must be stamped out, for the reason that science proves that it is communicated to the human race; that the market for high-grade dairy cattle must be maintained in Wisconsin; also, that the dairy industry cannot continue to progress if bovine tuberculosis is allowed to thrive.

The report of Dr. C. H. Eliason, state veterinarian, goes more into detail in dealing with animal diseases, and follows the lines of the commissioner's report.

Both the commissioner of agriculture and the state veterinarian are of the opinion that one effective way of awakening the state to the dangers and effect of animal diseases is that of acquainting people of the state with the facts concerning diseases which have gained footholds.

The division of entomology report shows the purpose and value of nursery and orchard inspection, pests found, surveys of cities and orchards for San Jose scale, status of white pine blister rust, recently discovered in Wisconsin, and the many other lines of its work, including apiary inspection.

The report goes into much detail with reference to ravages of the San Jose scale and the cottony maple scale, and sets forth the discovery of a new orchid weevil. It also calls attention to the poplar weevil becoming very serious in nurseries, and discusses a possible immune variety of poplar.

The report of the division of immigration will be of great interest to the thousands who are interested in settling the 10,000,000 acres of new lands in northern Wisconsin and in getting the right kind of settlers for these new lands.

One new method of reaching prospective settlers used by this division during the present winter was that of operating a special train, called the "Northern Wisconsin Products Special," in co-operation with the Chicago & Northwestern Railroad Company, through Minnesota, Iowa and Wisconsin. The excellent effect of thus bringing products of this new region right before prospective settlers are set forth.

Detailed statements of the finances of the state fairs of 1915 and 1916 are presented, together with an outline of the policy of the department in conducting the fair.

Unlike past reports of state fairs, the reports of the two fairs named are devoted chiefly to setting forth the shortcomings of the state fair, and to a statement of what is being done in overcoming shortcomings.

The report shows that, while necessary provision is made for features of entertainment, every effort is being made to strengthen the fair proper and make it stronger each year as a source of education and inspiration.

The report also shows that, while Wisconsin's fair ranks with any in quality, it is conducted at far less cost than other state fairs in the same class.

The division of crop statistics presents very important figures concerning crops and the live stock industries. These figures are sent to the division by an army of over 1,000 crop reporters, and are the most reliable figures obtainable on crop conditions in Wisconsin.

Among the important figures presented are the following: Acreage, production, yield and value of principal crops; number, average value and total value of live stock; number of silos.

These figures are the most complete ever issued by the state. Formerly the staff of crop reporters numbered scarcely 300.

Dairying and Community Prosperity.

The communities in which dairying has long been established are always prosperous. Homes are large and comfortable. The families are happy and industrious. Schools are up to date. The proportion of boys and girls attending high school and college is large. Roads are improved and are well kept. On every hand is there evidence of success, contentment and prosperity.

An outstanding reason for community prosperity is the fact that dairying makes the individual farmer prosperous. A group or collection of farmers who are individually prosperous naturally make up a prosperous community. Dairying is intensive and gives large returns per unit of land. A farm of eighty or 160 acres of land will support a family in a more creditable manner than will be the case with ordinary methods. Dairying has come when people have been forced into more intensive practices by higher-priced land or crowded conditions. Just now we may see dairying rapidly establishing itself upon the high-priced land of the East, in the central states or upon the irrigated areas in the West.

Dairying is an economical form of agriculture and economy and thrift are handmaidens of prosperity. It retains upon the farm the larger portion of the fertility of the crop and thus the productiveness of the fields is kept up without recourse to expensive commercial fertilizers. Dairy farms are invariably highly productive because the fertility is returned and because a plentiful supply of humus is supplied to the soil. Dairy farming is economical in that it utilizes practically all the land. Parts that are unsuited to the plow can in nearly all cases be turned to pasture. Rough feed produced on the farm is taken care of in such a way that it helps to swell the farm profits. The fields of dry cornstalks have been put into the silo to be taken out during the winter in the form of rich, succulent silage which will aid the high-producing cows in turning out a milk flow that will help to increase the bank account or make payment on the newly purchased addition to the farm or to add improvement of some sort.

Dairying is economical and again profitable because it utilizes labor throughout the year. On dairy farms there is no period of several months of idleness as occurred under pioneer methods. In this is a strong tendency to increase the profits. Dairying enables a farmer to intensify his business and to take his sons into partnership. There is a sufficient income from dairying to largely offset the desire of the dairyman's sons to go to the city. Oftentimes the fancy of the young man on an American farm inclines toward the production of pure-bred live stock. It is safe to say that there is no better opportunity with pure-bred stock today than there is with any of the popular dairy breeds. One man has said that "Dairying is evidence of dollars and sense." His attempt at wit may be somewhat crude, yet there is truth in his statement. Dairying is an evidence of prosperity and those communities in which dairying is well established are prosperous.

Reducing the High Cost of Dairying.

Dairying calls for a large expenditure in money, feed and brains. In these times when practically everything has reached unheard-of prices and when the "High Cost of Living" is one of the chief problems before the American people, it is natural that dairymen should be interested keenly in so far as their business is particularly concerned. They are, indeed, interested. They have held conventions and conferences, they have organized unions and they have declared strikes. Doubtless all these have helped, yet, in spite of all these things, there remains much that may be done on the individual farm which will, in a measure, large or small, help to relieve the seriousness of the situation and to put the business upon a more profitable basis.

Naturally the matter of feeding is the first problem to be attacked when we would reduce the expense connected with the business whether to feed grain or not, and if grain is to be fed, how much are the pertinent questions. Dairymen of long experience testify almost without exception that they have suffered disastrous results from attempting such practice. It is a well-known fact that, in localities where it has not been the practice to feed grain, winter dairying amounts to almost nothing. In a study made in the state of Indiana when high prices of feed first appeared not one out-and-out dairyman could be found who would consider for a minute that it would be advisable to try to carry the cows through the winter without grain. True enough his expense would be less, but he would expect his income to be cut even in greater proportion. Some men bought early and saved thereby. Others bought in quantities. In one country the farm bureau purchased commercial feeds at $9 per ton less than the current retail price. In another state the farm bureau made a saving of more than $5 per ton on bran.

Naturally quality of feed receives more attention. Alfalfa has come to the forefront more strongly than ever before. With its appetizing and nutritious characteristics, especially when combined with silage, the best of results can be secured with a minimum allowance of grain per cow. There is a herd of cows in Wisconsin that makes an average of over 400 pounds of butter fat per cow. Included in the herd are a number of two-year-old heifers. Those cows eat during the winter only six to eight pounds of grain per day along with alfalfa and silage. Near Lincoln, Nebraska, is a herd of splendid little Jerseys, the average production of which is also above 400 pounds. The cows of this herd eat scarcely more grain than do those of the Wisconsin herd. They, too, have alfalfa and silage in abundance. For a long time there have been established standards for feeding grain to dairy cows which are approximately that a Jersey should have one pound of mixed grain for each three pounds of milk produced and that a Holstein should be fed one pound of grain for each four pounds of milk. It is advisable, then, to feed as lightly of grain as may be done without impairing the vitality of the cow or the milk flow.

Alfalfa helps to reduce the high cost of dairying in that it ordinarily outyields any other forage crop. One farmer and dairyman in a corn-belt state has related his experience as having harvested twenty-eight tons of alfalfa of an equivalent area of clover which only yielded eleven tons. It is a splendid roughage for dry cows and for growing dairying. It is one of the strong pillars of efficient and economical dairying.

The silo is more in favor than ever before. This is caused by the fact that it has been forced upon farmers and dairymen more strongly than ever before that economical feeding and profitable dairying are not possible without the use of the silo. Experiment station tests have always been very favorable to the silo showing that cows fed silage produced milk at a much lower cost than those not fed silage. A showing made upon farms in a certain section of Minnesota has cinched the proposition so far as figures can convince anyone. It was found that farmers who have silos made a profit of $11 per head more than their neighbors, who did not have silos. We must, therefore, grant that the silo must have an important place in keeping down the cost of dairying.

Upon the dairy cow, herself, must we place our greatest scrutiny. With prices of everything so enormously high, no one can afford to keep a boarder in his herd. Yet there undoubtedly are boarders in every herd upon which a careful test is not being kept. The use of the Babcock tester in herds has been a great blow to the high cost of production in the dairy. In Wisconsin in one testing association the average yearly production has increased 100 pounds of butter fat since the work was started, and the amount of feed is but little more. In herds it has been found that one-fourth or one-half of the cows are not paying their way. It is only good business to eliminate those unprofitable cows and to retain the ones that do pay their way and more.

We must plan for the future. In doing this we must, every one of us, if we are to beat the monster, "The High Cost of Dairying," breed for better cows and ones that will produce more economically. The Babcock

Here is the heart of

THE NEW DE LAVAL CREAM SEPARATOR

THIS is the new self-centering De Laval bowl with detached spindle, that is creating such a sensation in the dairy world.

This new De Laval bowl, with patented tangential tubular milk passages and patented removable milk conveyor, makes possible in a bowl of given size and weight, operated at a given speed, greater skimming efficiency and capacity than has ever before been attained in any other cream separator bowl.

These are big advantages that you can secure only in the De Laval.

But aside from the big advantages of greater capacity and closer skimming, there are many other important improvements in the New De Laval.

All discs are now interchangeable and are unnumbered. There are fewer discs. On account of greater simplicity of bowl construction, the New De Laval is easier to wash and, capacity considered, is still easier to run than before. High grade construction and design, together with perfect automatic lubrication, are a guarantee that the splendid De Laval record for durability will be maintained in the new style machine.

Every New De Laval is now equipped with a Bell Speed-Indicator, the "Warning Signal" which insures proper speed and uniform cream.

If you are trying to get along without a cream separator or with a half-worn-out or unreliable machine, why not get a NEW De Laval NOW and stop your cream waste? You don't need to count the cost, because the De Laval will soon pay for itself.

There is a De Laval agent near you who will be glad to explain all the improvements and advantages of the NEW De Laval, and who will set and start a machine for you on your farm and let you try it for yourself.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for any desired information.

New Catalog will be mailed upon request

"Short Measure-eh?"

A cow can not *tell* you when she is sick, but her milk yield is a very accurate indication of her condition. The fact is, thousands of cows are allowed to remain unprofitable or below their reasonable standard of productiveness through their owner's failure to act on the hint of the milk pail. Don't pass it off by simply calling her a "backward cow"—correct the trouble and reap the extra profit.

Kow-Kure is a medicine for cows that are "off color." It is in no sense a food, but it promptly acts on the digestive organs and enables the cow to thrive on her natural food. Its great curative powers act on the genital organs where many cow ailments originate. The success of Kow-Kure is positive in the prevention and cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Scouring, Lost Appetite, Bunches and other common ills.

You can buy Kow-Kure from feed dealers and druggists, in 50c. and $1.00 packages.

Cleaner Milk—More Milk

THERE'S a copy of this book for you if you will simply tell us when you expect to build, remodel or equip a barn, and for how many cows. It contains nearly thirty plank frame construction blue prints—also valuable advice on barn sites, drainage, ventilation, arrangement, lighting, etc. Written by W. D. James and his expert assistants in barn planning and equipment building.

"JAMES" Sanitary Barn Equipment

"James" is the sterling mark of barn equipment—and costs no more than ordinary kinds. Stalls, Stanchions, Pens, Carriers, Ventilators, Horse Stable Equipment, Bull-Staff, Trucks, Watering Buckets—all are completely described in the book. *You* can afford James equipment. Ask about our Step-by-Step plan of equipping. *Start right* toward bigger barn profits, less labor, bigger milk production. Write today.

KALAMAZOO SILOS

Will Solve Your Silo Problems

They're built to meet the exacting farmers' needs and are the best in design, material and workmanship—combining every desirable feature a silo should have and embodying the "know how" acquired through more than twenty years experience in silo building.

Glazed Tile Silos

This construction is fire-proof, frost-proof, storm-proof, decay-proof, vermin-proof. Galvanized reinforcing. Requires no paint, no upkeep expense or repairs. First cost is the last cost—a written guarantee goes with every one.

Wood Stave Silos

Your choice of four time-defying woods. The Kalamazoo is the only factory where this outfit is manufactured complete from the raw material to the finished product. Our silos are quickly and easily erected by inexperienced home labor.

All Kalamazoo Silos are made with Galvanized Steel Door Frames, continuous doors, forming safe ladder entire height of silo.

Write today for our free descriptive booklet, and early sales plan.

KALAMAZOO TANK & SILO COMPANY, Dept. 100 Kalamazoo, Mich.

GLAZED TILE SILO

FIRST COST ONLY COST

A Monument to a Man's Good Judgement—A

B. V. T. SILO

It is the most necessary, most permanent, best looking improvement you can build on your farm. It will preserve your silage in the best of condition year after year. When you want to sell your farm it will be a big inducement to the buyer.

Built of Tile Made From Finest Clay in the World

Our Brazil fire clay makes the hardest, most durable and non-porous vitrified tile in the world. Used exclusively in B. V. T. Silos. These tile will not crack or chip off. Absolutely impervious to moisture and air. It is weather-proof, frost resisting, enduring. Triple air spaces and interlocking mortar joints insure an air-tight silo. Much of value in free Silo Book!

Brazil Hollow Brick & Tile Co.
Brazil, Ind.

tester enables us to cull our cows and permits us to retain for breeding purposes as well as for use in the dairy those cows that can show a profitable record. Here we have the old adage, "Survival of the Fittest," applied with business principles. The bull must be looked to for a large part in the improvement of the dairy herd and its consequent efficient production. It is plain and reasonable that bulls of pure breeding from high-producing strains will beget offspring superior in the dairy to those of nondescript breeding or from families of low average production. The following tells of the merit of pure-bred, grade and scrub bulls as it was found upon several hundred Illinois farms. "Figures won't lie," is a saying familiar to all of us. These figures tell an important truth. It was found that on farms where pure-bred bulls were in service that the farmer had as his labor income $1,102, the farmer who kept a grade bull could boast of a labor income of $734, which the one with a scrub bull had only $243. The labor income is the amount left after interest has been allowed upon all money invested and for depreciation and after all operating expenses have been paid. These figures enable any dairyman or farmer to decide for himself the class to which he will belong. It is safe to say that most of us will decide for the pure-bred bulls and the large labor income. It is plain if we are to meet the high cost of dairying face to face, and if we are to fight it with the determination with which European armies are opposing each other we must discard the grade or scrub bull just as the modern soldier has discarded the fighting methods of 100 years ago.

In barn management there is a chance for improvement and an opportunity to reduce the cost of production. Some men do the work with twenty-five or thirty cows as handily as others succeed with fifteen. Doubtless rearrangements can be made, which will reduce the amount of work required and thus increase the efficiency. Sometimes some equipment can be purchased that will pay interest on the investment and in time more than pay for itself as well. Barns constitute a big factor in the high cost of dairying. The open shed for shelter with a clean, sanitary milking room is much cheaper in its first cost and a great deal less expensive in its upkeep than are the large, beautiful barns which are chiefly useful as ornaments to millionaires' country homes.

"It is not good that man should live alone," is a scriptural injunction. "It is not good for dairymen to live alone." Dairymen who attend institutes, short courses, who are members of farm clubs are invariably better dairymen and have better bank accounts. Dairying calls for brain more strongly than muscle.

Making Gilt-Edged Butter.

To the Editor:—Many things are to be considered in making gilt-edged, first-class butter that will bring the highest price on the market. In the first place, we should have good butter-making cows; a part of the herd should at least be Jerseys. This breed will give the butter that fine yellow color and the butter will be more firm and solid. A part of the herd, however, can be Holsteins, Durhams or any of the other milk breeds, as desired. The cows should have good clover, timothy or blue grass pasture, or, better still, if we have it, is an alfalfa field, and not be compelled to run in the woods to shift for themselves. If they are treated in this latter way we cannot expect the best results. Good, clean, fresh water is essential when wanted and they should not be compelled to drink from stagnant pools which are infested with all kinds of microbes which will contaminate the milk. Milk cows should also have some ground feed in summer as well as in winter. This can be corn and oats or a little wheat bran is good, and aside from these a daily ration of some kind of roots will be found a great help to them. The milk cow deserves and is entitled to grain the year round as well as the work horse and should be treated as well, for it pays well, as she is surely working every day. No day passes without her giving a pail of milk and just that sure she must work to produce it; therefore, she should receive the treatment of a work animal.

Butter always retails at the present time in our towns from 20 to 30 cents per pound and even higher sometimes. I have been keeping some dairy cows a good many years and I know of no better feed than good pasture during summer with some grain and shredded fodder and clover hay during winter where there is no silo, but silage is by far the cheapest and best for winter feeding.

Cows with a good, warm barn and fed on silage will do nearly as well in winter as in summer on good pasture. The stables, however, should be clean at all times, for this is one of the essentials in making good, first-class butter.

The milk at all times should be kept in a sanitary condition and we can also make better butter and more of it by having a cream separator; in fact, I should not attempt the keeping of a great many cows without one. Churn as often as is necessary to keep the cream from getting old and too sour.

The butter should be made in pound prints arranged in a tasty manner by the use of a little ice in the summer. The butter can be so arranged at all times and will be a source of pride and pleasure as well as profit to the producer and will be sought after by those who want a first-class article of food.

Tax on Oleomargarine.

To the Editor:—There has appeared in the press of late a number of articles clamoring for the removal of the tax on oleomargarine. From reading these articles I would naturally suppose that they were written by parties who were not informed as to the object of placing a tax on oleomargarine, or by parties who were directly interested in the oleomargarine business.

The tax on oleomargarine was placed on the same by congress for the purpose of protecting the consuming public from fraud and deception in the purchasing of butter or oleomargarine. The present law in the United States places a tax of 10 cents a pound on oleomargarine when it is colored to imitate butter. It is taxed only a fourth of a cent a pound when it is put up and sold in its natural color, which is white or very light yellow. This fourth of a cent a pound tax was placed on oleomargarine so as to bring it under the Internal Revenue Department, as they have police facilities for enforcing the law and protecting the public against fraud.

The dairymen have no desire to place any tax on oleomargarine if it can be sold to the public for what it is. If the tax were removed entirely oleomargarine would be placed under the bureau of chemistry, and as they have no jurisdiction over oleomargarine until it becomes interstate traffic, the chance for fraud would be very great. In addition to this, that department does not have the police facilities for enforcing the law against a product like oleomargarine.

Every country where oleomargarine is sold or manufactured has certain restrictive measures controlling its sale and manufacture. Fraud and deception seem to have followed in the wake of this product. France, where the product originated during the Franco-Prussian war, has had to amend its law twice to protect the public against fraud in the sale of oleomargarine. The laws in many of the European countries are different from ours from the fact that they do not place a direct tax on oleomargarine, but they do prohibit it from being colored yellow in imitation of butter, and they also require that it must be sold in separate stores where butter cannot be handled. Heavy penalties are assessed for violation of the law. If such a law were possible under our form of government the tax would not be necessary. Germany, France and Belgium require oleomargarine to be sold in separate stores. Germany and France prohibit the coloring of the product in imitation of butter. More oleomargarine is sold per capita in Denmark than in any other country, and they prohibit the coloring in imitation of butter, but permit it to be sold in the regular stores, the same as we do in our co-

THE INDIANA SILO

Fifty thousand are now in use on the finest farms in America.

If you are going to buy a silo—this satisfactory service rendered everywhere—should be of special interest to you.

The cost of all materials is advancing like the price of wheat and corn.

Why not save money by contracting for your silo now. It undoubtedly will cost you more next spring or summer.

Let us send you our proposition—to contract now for your silo and deliver it later.

We still have openings for a limited number of farmer agents.

try. It is sold, however, in a different styled package, the package being oblong in shape.

Some of the European countries prohibit the mixing of butter with margarine in the manufacture of oleomargarine. Others restrict the percentage of butter that can be used. Writers of late have been giving the impression to the public that the manufacturers of oleomargarine are paying 10 cents a pound tax on the same. The late report put out by the internal revenue shows that over 97¾ per cent of the oleomargarine in this country last year only paid a fourth of a cent a pound tax.

The first law in this country placing a tax on oleomargarine was passed in 1886, during President Cleveland's administration. This law placed a 2-cent tax on oleomargarine and permitted it to be colored in imitation of butter. During the time that this law was in effect the fraudulent sale of oleomargarine for butter became appalling. The mixing of butter and oleomargarine was practiced quite extensively. Thus the consuming public had no protection against fraud.

There was more oleomargarine manufactured last year than ever before in the history of the industry in this country. There were manufactured 152,509,912 pounds, according to the report of the Internal Revenue Department just published. Of this amount 2,587,689 pounds were exported, and consequently were relieved from paying the tax. Seven hundred and forty-eight thousand five hundred and thirty-one pounds were withdrawn free for use of the government during the fiscal year ending June 30, 1916.

During the same year there were manufactured 145,760,973 pounds of uncolored oleomargarine, which paid a tax of only ¼ cent, as against 138,241,907 pounds the previous year.

Of the enormous amount of oleomargarine produced during the fiscal year only 3,403,287 pounds were taxed at 10 cents a pound, or a little less than 2¼ per cent of the total make.

I will admit that the present law is not perfect. It permits oleomargarine manufacturers to use the cheaper fats, such as intestinal fats and vegetable oil, milk, cream or butter, in making their product. They are only taxed ¼ cent a pound on the same when sold in its natural color. There is no limit as to the amount of water that may be incorporated in oleomargarine. In addition to this, such terms as Butterine, Jersey Brand, Holstein Brand, Guernsey Brand and other such names indicate that it is made from milk. On the other hand, if the creamery man incorporates the smallest fraction of a per cent of foreign fats in connection with his butter he is required to pay a tax of 10 cents a pound and a license of $600 a year, and to brand it adulterated butter. There should be a line of demarcation between these products that would prohibit the mixing of butter and oleomargarine, unless same was branded adulterated butter. This would prevent oleomargarine from masquerading as butter. G. L. McKay.

Walworth County Farmers at Madison

County Agricultural Agent, L. L. Oldham, of Walworth county, headed a delegation which visited Madison Swine Week, and got a great deal of good out of the programs. Thayer, Mr. and Mrs. Albert Ledger, Jr., J. T. Hackett.

Water For the Cows in Winter.

If water and fresh air cost something for our animals they would be used to a better advantage. Hens require water to lay eggs. Cows no less require an abundance of water to give milk. To be convinced, it is only necessary to read the analysis of a pound of milk or an egg.

That the water must be "good and pure" goes without saying, but that one thing has been harped upon so long as to become tiresome. Going a trifle deeper into the question, do our cows get water at all through zero weather? An accusation of this kind would, of course, cause any self-respecting farmer to become indignant, and with some reason, because no one would permit an animal to suffer for water if only from a humanitarian standpoint.

They "get water," but from where? In all too many cases it is from a tank where a hole has been cut through ice twelve inches thick, out in the open, where the cold wind is blowing, causing her to get yet another hump in her already crooked back. Other animals often refuse to drink as much water as necessary under this kind of condition, but cows just simply cannot drink; their teeth cause them pain, and the result is that they do without.

It is with a good deal of amusement that we read about giving our cows "fresh cold water" if we would prosper. The fresh may be all right, but we have seen cows leave a tank of such in hot weather and snatch the really warm water flowing from a heated pipe, in preference. Cows are built this way, and by observance it is possible to learn what is better for them.

Few are the cases where water is "piped to the stalls," on the general farm, where the dairy cow is a side line. Few are the times we can follow the advice of the ones who have modern improvements to the letter; but certain it is that in the main we can profit by each and every experiment. The point is that the cow needs water at least 20 degrees above freezing, or warmer, and how to get it on the average farm.

Milked 7 Years
with
HINMAN MILKERS

Seventeen years old and averaging 40 lbs. milk daily.

Owned by Mr B. and L. D. Upham
Georgetown, N. Y.

The Uphams have been enthusiastic users of the HINMAN MILKERS for 7 years. They are now using them for their Official Tests and many fine records are being made with the help of the HINMAN. That the HINMAN does not injure cows in any way, is proved by this long, satisfactory service.

HINMAN MILKERS

WILL Surely Increase Your Dairy Profits. So simple a boy can milk 18 to 25 cows an hour. The Uphams, for example, used Hinman Milkers for seven years day after day. Saved one hired man a year in their dairy. Six months' use paid for the machine. One year meant a profit of initial cost of the machine. **Multiply this profit by seven** and you will realize the **wonderful saving** possible for dairymen who use HINMAN MILKER. Their herd of 26 cows averaged $123.71 each last year. The simplicity of the HINMAN is responsible for its long daily use without trouble.

No complicated pulsating mechanism—no air pipe lines—no vacuum tanks. Its simplicity also means low first cost and low upkeep cost.

Get Our Big Illustrated Catalog FREE

and learn more about the operation and construction of this simple, practical milking machine. Means more profit for you if you milk only 10 cows. Catalog gives many interesting records of famous cows made when milked with HINMAN MILKERS.

Stop Hatching Weak Chicks

WITH CHEAP INCUBATORS

Remember, it is not how many you hatch that counts, but how many you raise. A Queen costs but little more, and the extra chicks that live and grow soon pay the difference.

Queen Chicks Live and Grow

Most of the chicks you lose in the first two weeks die because they did not have proper vitality or strength to start with. Queen Incubators are famous for big hatches of strong healthy chicks that live and grow. The American Poultry Journal wrote us: "During the many years you have been advertising Queen Incubators in our paper we have not, to the best of our recollection, received a single complaint from one of your customers." Catalog free

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Better Results From Hatching Pullet Eggs.

To the Editor:—I see in your valuable paper that it is stated one should not breed from pullets and cockerels. I would say that this is surely a mistake, for I have been breeding both ways and I get better results from my pullets. I used four hens to a cock and set the eggs, and out of fifteen I got eight chicks, and they did not do well. Then I set fifteen pullet eggs and got twelve chicks, so you see young stock does better.

I raise the Buff Rock and Black Minorcas. Of course, I only have a backyard flock. I am a painter by trade, but I find my chickens are the bread of life. I do all my hatching in the months of January, February and March while I am idle, and my chicks are large and do fine by the time spring and hot weather comes on. My pullets start to lay then by September and are laying all winter when eggs are top price. Of course, I tend to my flocks to the top notch. I feed them good grain and mashes and meat scraps and warm water at all times. I keep them clean and warm. I go to my chicken house and sit down and look them all over for lice or any ailment. I never have sick chickens or bowel trouble, which so many are complaining about. If they would keep them out of trees and dirty, filthy places and look after their sleeping houses as I do, or as they do their own rooms, the chicken business would pay big. I am in a position to see hundreds of chicken houses and their care and it is surely a fright. Take good care of the fowls, pick the best for breeding and let the culls go. For lice I have found nothing that is equal to lard and coal oil rubbed in the feathers and around the vent.

I set my incubator and run it at 102 for a week and a half and then I run it up to 103, and I have the best of hatches. The day before they hatch I take a flannel rag, wring it out of warm water, and place it over the eggs for about five or ten minutes. This loosens up the egg shell. I always keep about 50 or 55 per cent moisture in the incubator.

I never feed my chicks until they are forty-eight hours old. Then I boil some water and let it get cool and let them have that to drink. It kills all diarrhea germs and bowel trouble. If you give them cold water it upsets the little chick's bowels.

Some so-called chicken raisers claim they have the best in the land, and when you get some of their eggs and they do not turn out well they tell you the eggs were tampered with en route to you, or someone has bothered them during incubation. Chicken raising for the good of your customers means for you to keep the best and send the best. Don't advertise the best and send the poorest stock. Put out just what you advertise, and when you ship let them be as good as you would expect yourself. Don't say your hens are bred to lay, for we all know hens won't lay unless they are well cared for both night and day, have clean feed, warm housing and are free from lice and mites. With all this you can just bet the hens will do their part. I know from experience.

Geo. H. Copeland.

A Beginner in Poultry.

To the Editor:—I would like to have some advice from some of your readers on poultry raising for the market. I am a young man just starting in the business and I only have a small farm of about twenty acres cleared. I figure on raising young chicks for the butcher this summer and figure on buying a good incubator and brooder. Do you think that I can make it pay by putting most of my time at it? How old must they be before they will be ready to market? If I give them the proper feeds and care can I set the incubator two or three times during the early summer? How many ought I to raise to make it pay me a fair bunch of money during the summer? Give me all the information you can, so it will help me in starting. You see my farm is not big enough to keep many cows, as I have to pasture half of it and the more cows I keep the more pasture I need, so I figure on keeping about three cows and raising chickens.

John Waldburzer.

Feeding Ducklings.

Ducklings do not need feed until they are from twenty-four to thirty-six hours old, after which they may be fed five times daily on a mixture of equal parts, by measure, of rolled oats and bread crumbs, with 3 per cent of sharp sand mixed in the feed. About the third day this feed is changed to equal parts bread, rolled oats, bran and corn meal; then after the seventh day to three parts of bran, one part each of low-grade wheat flour and of corn meal, 10 per cent of green feed and 5 per cent of beef scrap, with about 3 per cent of sand or grit in all of the rations.

Feed four times daily after the seventh day until the ducklings are two or three weeks old, when they need be fed only three times daily. After the ducklings are a week old the grit or sand may be fed either in the mash or in a hopper, but the common practice is to feed grit in all duck rations. Beef scrap is not usually fed until the ducks are a week old, when about 5 per cent is added to the ration, which amount is gradually increased to 15 per cent by the end of the third week. Gradually increase the proportion of corn meal and decrease the bran until the ration becomes the fattening ration given below for those ducklings which are to be marketed. Those to be saved for breeding should be given the duckling ration with the increased beef scrap (15 per cent), but not fed fattening ration. They should also be given a good range where grass and running water are available; if confined to bare yards considerable green feed and vegetables should be fed.

The ducklings to be marketed should be fattened for two weeks before killing on a ration made of three parts, by weight, of corn meal, two parts of low-grade flour or middlings, one part of bran, one-half part of beef scrap, with 3 per cent grit and 10 per cent green feed. Feed this mash three times daily, or use a mash of three parts corn meal, one part low-grade wheat flour, one part bran, 5 per cent beef scrap and 3 per cent oyster shell, with the green feed and grit added. The green feed is sometimes left out of the ration during the last seven days of fattening, as it tends to color the meat and may produce a slightly flabby rather than a firm flesh; however, it is easier to keep the ducklings in good feeding condition on a mash containing green feed. Boiled fish may replace the beef scrap, but should be fed up to within two weeks before they are killed, as it may give a fishy taste to their flesh. A considerable quantity of boiled fish is also fed in the mash to laying ducks in sections where the duck farms border on the water and where fish is available at a very small cost. This fish aids

ENGRAVING Halftones made from pictures or drawings of stock for your letterheads, post cards, catalog advertising. Quick service, best work, reasonable prices. Write for information. HOMESTEAD COMPANY Engraving Dept. Des Moines, Iowa

materially in reducing the cost of feeding.

Green ducks are marketed at from eight to twelve weeks of age, according to their condition and weight. Two or 3 per cent of oyster shell is recommended in most fattening rations, but bone ash, ground or cracked bone, or bone meal would appear to be better mineral feeds to add to these mixtures. If milk is available at profitable feeding prices the rations recommended for crate-fattened chickens would give good results in fattening ducklings, producing a well-bleached, milk-fed green duck. Celery seed is also used in fattening ducklings, as it is said to flavor the flesh.—[Bulletin.

American Eggs to England.

It seems that American egg speculators, cheated of large profits at home because of the egg boycotts by restaurants and housewives, have turned to England and are getting their dreamed-of profits there. The New York Times' London correspondent recently reported the arrival of a cargo of nearly 15,000,000 eggs from America and said the imported eggs caused a marked drop in egg prices in the English metropolis.

Egg prices in London had been $1.14 for the choicest variety down to 90 cents for the common sort. The American eggs sent the prices down to $1.08 for the best and 60 to 70 cents for the others. Another huge egg cargo is said to be on the way from America. The American eggs mostly sold for about 60 cents.

The London egg market consumes about 20,000,000 eggs daily. Of this amount about 12,000,000 a week is sent over from Canada, some come from Egypt, but the most are produced at home. Hitherto American eggs have appeared only at very infrequent intervals on the English markets.

State Land Opening.

The state of Texas will put on for sale to the public several thousand acres of school land at $2 an acre, 5 cents an acre cash and balance in 40 years' time at 3 per cent interest. Information regarding sale will be furnished by writing Investor Pub. Co., San Antonio, Texas.—Adv.

A SILO MAY BE ORNAMENTAL.

This picture of a cement silo taken on the Fred Fiedler farm in Oconomowoc, Wisconsin, shows that a silo may be ornamental as well as useful. This silo has been pebble-dashed and surmounted with an ornamental dome effect. It will be noted that the silo is also protected by a lightning rod. This silo complete as it stands cost the owner $235. The size is 12x40. It will be noticed that the price is very reasonable and probably considerably less than the silo could be reproduced for on the average farm. This is due to the low cost of labor and the fact that good sand and gravel were obtained on the farm where the silo was built.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. The rate is six cents per word, each insertion. Note the low cost to reach our 90,000 circulation.

THE WISCONSIN FARMER **MADISON, WISCONSIN**

POTATOES.

POTATO Growers in Vilas County raise seed potatoes for Texas trade. Prices guaranteed for 1917 crop. Potato farms on easy terms. Sanborn Company, Dept. P, Eagle River, Wis.

CERTIFIED Rural New Yorkers and Green Mts. for sale. Prices and quality right. Also Noroton Beauties (Early). Amounts limited. S. J. Uhrenholdt, Hayward, Wis.

CHESTER White fall pigs sired by W. B.'s Wonder now ready to ship. Wm. F. Belda, De Forest, Wisconsin.

FARM LANDS.

NORTH DAKOTA in all essentials; Soil, climate, crops, people, is a second Iowa. Because of heat, wet and rust the 1916 grain crop of North Dakota was short—yet government reports show $167,544,000 or $2,253 per average farmer. In last seven years average farmer in North Dakota produced $1,975 worth of crops; in South Dakota, $1,639; Iowa, $1,631; Illinois, $1,437; Minnesota, $1,396; Wisconsin, $901. Now is time to get North Dakota land, while price is low. No commission to us. Great opportunities open. Write for our direct dealing plan, booklets, maps, etc. J. S. Murphy, Immigration Agent, Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minn.

IT'S a question of time, as to whether you get a choice piece of our dairy and clover lands, for they are going fast. Aitkin county is the mecca of the homeseeker who wants a choice location, rich land, abundant grasses, and markets near. The best of it is, these lands have not been boomed in price. That is why, if you act quickly, your farm will cost but little. Write Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minnesota.

LANDOLOGY, a magazine giving the facts in regard to the land situation. Three months' subscription, FREE. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter and say, "Mail me LANDOLOGY and all particulars FREE." Address Editor, Landology, Skidmore Land Co., 310 Skidmore Bldg., Marinette, Wis.

120 ACRE farm very reasonable. 40 acres under cultivation; fertile soil; small lake; buildings; 6 miles from town, 1 from school; $3,500; $900 down. The Ev. Luth. Colonization Co., 1030-M, Dept. 10, Merrill, Wis.

FOR SALE—205-acre, all improved, level farm in west central Wisconsin. Ideal dairy farm. Two miles from good market and high school. Reason for selling—to close an estate. For further information Phone 2301 (Madison), or write T. N. Halvorsen, Dallas, Wis.

LAKESHORE dairy farm, only $1,100. 39 acres, clay loam soil, frame house 12x26, log stable 16x16, chicken house. 1 mile store and creamery, 3 miles large inland town, 6½ miles railroad. A snap. Baker H-110, St. Croix Falls, Wisconsin.

READ this! Would you sell your farm if you got your price? No agents' commissions. No middle-man to take big profits. You can do it. Particulars free. Address Charles Renich, G-2, Woodstock, Illinois.

FOR SALE—80-acre farm, 3½ miles from town, near school and cheese factory; 40 acres cleared, 20 acres plowed; fair buildings; price $4,400. Joe Dyre, R. 4, Greenwood, Wisconsin.

EIGHTY acres sugar maple, clay loam land with house, barn and clearing. $25 per acre, small payment down. Frank M. Doyle, Ladysmith, Wisconsin.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

A GOOD eighty-acre farm, with or without stock, for sale cheap, if taken soon. A. M, care this paper.

BUSINESS CHANCES.

FREE for six months—My special offer to introduce my magazine, "Investing for Profit." It is worth $10 a copy to anyone who has not acquired sufficient money to provide necessities and comforts for self and loved ones. It shows how to become richer quickly and honestly. Investing for Profit is the only progressive financial journal and has the largest circulation in America. It shows how $100 grows to $2,200; write now and I'll send it six months free. H. L. Barber, 509-28 W. Jackson Boulevard, Chicago.

SALESMAN WANTED.

SALESMEN wanted to canvas the farming and threshing trade, soliciting orders for Lubricating Oils, Greases and Paints. Excellent opportunity for right party. Previous experience unnecessary. Address at once The Victor Oil Company, Cleveland, Ohio.

MONEY TO LOAN.

MONEY to loan on Wisconsin farms in amounts of $5,000 to $25,000. Security must be twice the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

FARM LOANS on very good farms at 5% interest without commission and with privilege of partial payments. Write Geo. L. Jacques, Special Loan Agent, Northwestern Mutual Life Insurance Company, Neillsville, Wis.

POULTRY, ETC.

WRITE FOR LOW PRICE on best thoroughbred poultry and pigeons, eggs and baby chix, turkeys, ducks, geese, incubators, brooders and poultry supplies. Iowa Poultry Farms, Inc., Box 414, Clinton, Iowa.

SINGLE Comb White, Rose Comb Buff Leghorn males. White Runner ducks. 7 shows 1917, 78 ribbons, 2 silver cups. Satisfaction guaranteed. Dwight Philpot, Sun Prairie, Wis.

FARM VALUES AND RAILROADS

Transportation Problem Must be Solved Nationally in Order to Assure Agricultural Prosperity.

THE greatest industry of the United States is farming. Next to that comes transportation.

Efficient transportation is essential to the continued welfare and business progress of the nation. To the farmer it means wider markets and better prices for his crops.

Speaking for 90% of the railroad mileage of the country we invite your co-operation in the solution of the railroad problem to that end.

Make Regulation Efficient

There is no question that public regulation of transportation has come to stay. The railroads accept it. They ask only that such regulation be made efficient. They ask that the functions properly subject to public supervision—incorporation, the issuance of securities, the making of rates—be placed under the direction of a single responsible national body such as the Interstate Commerce Commission, with regional sub-commissions, in order that regulation may be kept close to the people. They ask that such regulation be so administered as to permit the railroads to earn a living return, to attract new capital and to make the improvements and extensions necessary to enable them to serve the American people fairly and efficiently.

In the Federal Reserve and Rural Credit Banking Systems the operation of regional divisions under Federal supervision is well illustrated. The railroads seek a similar solution of their problem.

Commerce is Nation Wide

The farmer wants free trade among the states.

Commerce in farm products is not confined to state lines. It is nation wide. Its regulation should also be national. The fundamental state right is the right of each state to be protected against discriminations by other states such as exist today. Every barrier that a state erects to the free movement of commerce across its borders limits the farmer's market, makes it easier for speculators to control products and depress prices and tends to increase the cost of what the farmer has to buy.

The railroads cannot serve 49 masters—48 states and the nation—and serve efficiently. The present system of multiple and conflicting regulation is wasteful and destructive.

In the interest of all, regulation should be in behalf of all the states. We invite discussion of this question and shall be glad to answer questions and to supply information on request.

This is the first of several brief talks on this subject.

More Hogs For Our Dairy Farms.

(Continued from page 1)

distinctive breed type and the offspring of bred-for-production sires. The most profitable hog is the hog which will grow in the shortest time on reasonable feeding, to a weight of 250 pounds, and be ready for market. This is agreed by all swine men. The representatives of the several breeds make their claims on this subject, but the fact remains that good breeders are making a success with all of the several standard types, such as the Poland China, Duroc, Berkshire, Hampshire, Chester White, Yorkshire, etc. The selection of a breed is something like the selection of a breed for a dairy herd. There are advantages in all, and some men will do best with one breed and some with another. But the dairyman-farmer, who wants his pigs to fatten quick enough to bring the best profits, should steer very clear of the scrub hog. He is just as bad as the scrub ow, which has been relegated to the block by our cow-testing associations. Some of our dairy farmers have said to themselves that they are raising hogs for market only and that the pure bred is not necessary. A little experience in trying to put live weight on some of the scrub pigs we have seen ought to open a man's eyes on this subject. It pays to have good stock. It is not necessary to have National Swine Show winners to raise good pork, but good blood will tell in hogs raised only for the market.

The hog does not require so much attention as other kinds of live stock which might be raised on a dairy farm. As labor is a problem to be reckoned with in these days, the fact that Mr. Hog will do a whole lot toward entertaining and caring for himself is well worthy of attention. Besure to give him plenty of opportunity for exercise.

There is a conspicuous revival in the swine industry in this state. From every part of the state we find a greater interest in hogs. We should have 5,000,000 hogs in Wisconsin—twice as many as there are today. Breeders have had the best season on hogs that they have ever known in this state. At one of our big sales the average was $101 per animal sold, and we understand this is the highest average maintained at a large hog sale in this state. It will not be surprising if this average is laid in the shade before very long. Good breeding stock is in demand and will be even more in demand. The hog business of Wisconsin in the next five years will not be confined to the southern and western counties. It will reach farther over into dairyland. It will penetrate the new counties of the North, where they have demonstrated that mature corn can be grown and plenty of other hog feed added to the skimmed milk from the dairy barns. The future of the hog business in this state is very bright, indeed, and The Wisconsin Farmer would like to see all of its dairymen readers give the matter careful study and get in on the good profits which are going to be made in our state in this division of live stock.

Swap Experiences Swine Week.

(Continued from page 6.)

that hogs undoubtedly contract tuberculosis from drinking milk that has not been sterilized.

Co-operation with one's neighbors offers the greatest opportunity for the small breeder to dispose of his surplus hogs, or other stock, according to E. T. Robbins, county agricultural agent of Tazewell county, Illinois. Mr. Robbins considers the county the best unit for such co-operation. In Tazewell county, Illinois, they have a Percheron association organized in July, 1913, and this association has disposed of all surplus Percherons owned by 650 members. Even young breeders who had no acquaintance outside of their neighborhood were able to dispose through the association of all their surplus Percherons. In Mr. Robbins' judgment, an organization can advertise more effectively than an individual and it may undertake an advertising expenditure which would be prohibitive to the individual. Furthermore, fifty men can offer fifty times as much stock and a much better selection for buyers. Knowing that they will be able to dispose of their stock, members of such co-operative enterprises have no hesitancy about increasing the number of live stock on their farms.

The Wisconsin Live Stock Breeders' Association held several very important meetings Farmers' Week. This association is distinct and separate from the various breed associations. In fact, it is kind of a congress of all of the individual breed associations. One matter of considerable importance which came up this year was the question of engaging a representative of live stock and agricultural interests to appear before the Wisconsin legislature. A great many bills are constantly coming up in the general assembly in which farmers and live stock breeders have special interest. The live stock breeders' association have and other associations have forwarded resolutions to the officers of the general assembly relating to various matters. It seems that it is easily possible for these resolutions to be read once and then "pigeon-holed." Furthermore, it often appears that members of the general assembly would like to have further information on subjects which are brought up of interest to farmers. It seems to be important that the farmers of the state have a representative who can supply this information and who will do it in a way to make it most effective. Mr. Geo. McKerrow has been named a special representative to present matters of importance to members of the general assembly either in their committee rooms or personally. Some expense will be created by this new move. Representatives of several farmers' associations are organized in what is to be called a legislative council and some arrangements will be made for bearing the expense. Mr. McKerrow is one of the experienced farmers and stockmen of the state, well acquainted with the needs of the farmers and of the live stock industry, and, furthermore, he has the confidence of those who are sending him to appear before the general assembly. A number of the state agricultural organizations received state aid, but none of the money appropriated as state aid will be used to pay Mr. McKerrow's expenses. This matter will be met from a special fund to which farmers will be asked to contribute.

A Good Creamery Report.

The annual report of the West Salem, Wisconsin, creamery shows total receipts for the year $279,942.22. The West Salem Co-operative Creamery Company has 378 shareholders, and an average of 365 patrons. Patrons were paid $231,364.20 for cream during the year 1916. Other items of interest in the annual statement of this, one of the most successful co-operative creameries in the country, follows:

Canadian Farmers Profit From Wheat

The war's devastation of European crops has caused an unusual demand for grain from the American Continent. The people of the world must be fed and wheat near $2 a bushel offers great profits to the farmer. Canada's invitation is therefore especially attractive. She wants settlers to make money and happy, prosperous homes for themselves by helping her raise immense wheat crops.

You can get a Homestead of 160 acres FREE and other lands at remarkably low prices. During many years Canadian wheat fields have averaged 20 bushels to the acre—many yields as high as 45 bushels to acre. Wonderful crops also of **Oats, Barley and Flax. Mixed farming** as profitable an industry as grain raising. The excellent grasses full of nutrition are the only food required for beef or dairy purposes. Good schools, churches, markets convenient, climate excellent.

Military service is not compulsory in Canada, but there is an extra demand for farm labor to replace the many young men who have volunteered for the war. The Government is urging farmers to put extra acreage into grain. Write for literature and particulars as to reduced railway rates to Supt. of Immigration, Ottawa, Canada, or

Geo. A. Hall,
123 2d St., Milwaukee, Wis. Canadian Gov't Agt.

Farm For Sale or Rent

A GOOD home on 80-acre farm. Good buildings, good soil, near school and creamery, six miles west of the county seat of Taylor county, Wisconsin. Nearly half cleared, balance easy to clear. Price $6,000.00; $1,500.00 cash, balance on time. Will rent for three or five years.
L. A. KIMBALL LAKE GENEVA, WIS.

Would $150 MONTHLY as General Agent for $150,000 corporation and a **Ford Auto** of your own, introducing Stock and Poultry remedies, Dips, Disinfectants and Sanitary Products, interest you? Then address **Royoleum Co-Operative Mfg. Co., Dpt. K-31, Monticello, Ind.**

A SMALL farm in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Jaquin Valley illus. folders, free. C. L. Seagraves, o Ind. Com'r, A.T. & S.F. Ry., 1959 Ry. Ex., Chicago.

WRITE J. D. S. Hanson, Hart, Mich., for list farms in Co., where biggest crops grow. Fruit, grain, alfalfa, dairying.

STOP! LISTEN! 40-acre improved valley farm, $950; free list. McGrath, Mountain View, Mo.

Guernsey Breeders to Be Active.

Western Guernsey Breeders at Madison Take Up Plans to Give Greater Scope to Work of Breeders in This Territory.

THE Guernsey breeders of Wisconsin and adjoining states forming the Western Guernsey Breeders' Association, were scored severely by several of the members during the annual meeting at Madison, February 9th, for their inactivity in the spreading of Guernsey gospel. The outgoing president, H. D. Griswold, started the ball rolling by a speech and discussion on methods of selling animals. This speech lead to the subject of publicity and a lengthy debate followed the outcome of which was that the association is going to canvass the territory with a plan of assessments that would be fair to all and give the association a fund to employ a field man who will work exclusively through this part of the country for the furtherance of Guernsey interests. There was a considerable amount of money subscribed on the spot and no trouble is anticipated in securing the balance. This is not to be an appropriation for advertising, but a fund for getting into personal contact with prospective buyers.

W. W. Marsh, of Waterloo, Iowa, was the chief speaker of the meeting. He made a few points that aroused considerable interest and gave his listeners more than one pleasant thrill by his masterful picture of the possibilities of the Guernsey breeder to reap fame and fortune by intelligent and careful breeding. Breeding for type and beauty will make the Guernsey famous in years to come. According to Mr. Marsh, the fame of Bates and Cruickshank, of Short-horn renown, will be the lot of the man who can stamp his herd with a type that "fills the eye" of the buyer. The man that can do this has not been found, but he ventured to predict that animals will be sold within the next five years that will frequently pass the $10,000 mark. Mr. Marsh took time to explain what he thought to be a deficiency in the present system of records. Where now a cow or heifer makes a phenomenal record and no restriction is placed on the manner in which this has affected the condition of the animal for future breeding purposes. Mr. Marsh suggests that the present system be supplemented by the English system which provides that the cow must be safely in calf five months after the record is begun and drop a strong and healthy calf within a set time after completing the test. That, in the opinion of Mr. Marsh, would be a health certificate of the first class and insure against contagious abortion being disseminated by unscrupulous dealers. The breeders would not be forced to make this test, but such breeders that would could ask and would receive a larger price for their cattle because of the security it would give the buyer. There would, therefore, be two records, one of the old A. R. system and the additional one of the English system, printed in larger or smaller type immediately below. The association did not adopt this as yet, but a resolution was passed to the effect that the present system having caused some dissatisfaction the national association should take the matter up and see whether any improvement of the system is possible.

J. R. Bent, of Ogelsby, Illinois, read an interesting paper on culling and improving the herd. It is the opinion of Mr. Bent that many breeders sell a bull too soon. Often it is impossible again to obtain the services of the bull so sold should his offspring prove to be of value. In the culling process many breeders are afraid of the waste. Mr. Bent pointed out that the breeder of vines and shrubbery did not consider the parts of the tree that he cut away as a loss, but rather as a necessary practice in the improvement of the whole stock. There should not develop within the breed, as has been the case with other cattle, separate breeds. Whenever a great record is made the small breeder should not despair, but draw a lesson from the work of the other man. The dealer without a conscience came in for a good scoring, but a distinction was made in favor of the honest dealer.

At the Wisconsin Agricultural College some exceedingly interesting data were compiled with the herd of Guernsey cows regarding the casein content of the milk of Guernsey cows. James B. Robertson, now with the Burnside Guernsey herd, summarized the work as follows:

The average per cent of casein produced by the university Guernsey herd for a six months' period was 2.831 per cent.

The average production of cheese of the ten Guernsey cows of the university herd for a period of six months with animals in all stages of lactation and varying ages was 416.58 pounds of cheese. Six cows in three months, forty days after calving, produced an average of 263.9 pounds.

Direct determination of both casein and fat is necessary to determine the ability of any one cow to produce products.

Charles L. Hill, Rosendale, spoke in part on the responsibility of the breeder as follows: "My own experience for the last sixteen years has shown it possible for a herd to be kept absolutely free from tuberculosis, and the breeder who will not do this should not be allowed to do business in Wisconsin or any other state."

Officers elected for next year are: President, J. R. Bent, Ogelsby, Illinois; vice presidents, Gavin McKerrow, Pewaukee; F. K. Babson, Chicago; W. B. Quarton, Algona, Iowa; secretary-treasurer, C. L. Hill, Rosendale, Wisconsin; members of executive committee, Lloyd Rundell, Roberts, Wisconsin; Dr. L. A. Wright, Columbus, Wisconsin.

All cows give some

MILK

Well fed cows of course give

MORE MILK

but cows fed COTTON SEED MEAL give the

MOST MILK

and do it at less cost per pound.

COTTON SEED MEAL

when carefully selected, such as our BRANDS are, is the most economical and most satisfactory concentrate on the market. It is rich in protein, and offers it to the animal in a highly palatable and digestible form, and cows need protein to produce the maximum amount of milk. A scientific dairyman will always include in the ration sufficient cotton seed meal. More natural farm roughage and less grain products can be used. Ask your Experiment Station.

OUR BRANDS:

Owl Brand	Dove Brand	Jay Brand	Fox Brand
41-43% Protein	38-½-40% Protein	36-38% Protein	Feed Meal 20-22% Pro.

All selected quality—Cotton seed meal is our specialty and has been for forty years. Come to headquarters.

Wisconsin Horse Breeders' Meeting.

To the Editor:—I am glad to report that the horse breeders' association held a very successful meeting at the college of agriculture on February 7th. The meeting was attended by a large number of farmers and students and interesting addresses were given by W. L. Carlyle, dean of the agricultural college, Stillwater, Oklahoma, who spoke on factors essential to more successful and efficient production of draft horses and urging in particular that efforts be extended to interest the young men on the farms in better classes of live stock and more efficient methods in order that their interests may remain with agriculture and that better living in the country be established. He pointed out where country life was the most ideal and people were most successful it was in connection with live stock production.

The meeting was also addressed by Mr. E. T. Robbins, county representative of Tazewell county, Illinois. He has been successful in working in the horse-breeding center. He told of the achievements of the Tazewell County Percheron Breeders' Association in the way of producing and selling pure-bred and grade Percherons. He pointed out the essentials necessary to the production of high-class draft horses. The importance of feeding them during their growth and bringing them into an attractive condition for market.

The association went on record approving the present regulation of the Wisconsin stallion law. They also voted to continue futurity prizes at the Wisconsin State Fair. This has been a most successful venture of the association in stimulating the breeders to bring out high-class yearlings for public exhibition. The association will hold a horse show in the stock pavilion of the agricultural college on March 13, 1917. J. G. Fuller.

Assoc. Prof. of Animal Husbandry, Wisconsin College of Agriculture.

Get a Good Stand of Corn

TO get an even stand of corn—2, 3, or 4 sturdy stalks in each hill and no hills loafing through the summer—use an **International or C B & Q corn planter.**

They plant corn accurately whether used with edge drop, flat drop, or full hill drop plates; whether the corn is checked or drilled. The drop clutch can be changed, while the planter is working, to drop 2, 3, or 4 kernels to a hill. The tongue is easily adjustable to the height of the horses. A handy foot drop lever makes head row planting easy.

When you look over the **International or C B & Q** planter, don't miss the *automatic marker*, a handy feature that saves a lot of work and time. There are fertilizer attachments if you want them, combination pea and corn-planting hoppers, open wheels or closed—your planter will be equipped just as you want it. You can plant rows 28 to 44 inches wide by 2-inch adjustments, with four distances between hills.

These planters are so good you will want to know all about them. Drop us a line and let us send you full information.

Delicious Baked Ham.

To the Editor:—In a recent issue I noticed an inquiry about how to cook a ham, and will try to answer "Eloise."

Select a small ham, wash and trim. Place it in a large kettle on the stove, covering with cold water. Bring slowly to a boil. Season with salt and pepper. A little mustard and cloves, onion or garlic may be added if desired. After bringing to a boil pull the kettle back on the stove and boil slowly until the ham is tender. Let stand in the liquor until cold, then remove to covered roaster, taking off skin and surplus fat. Place liquor in roaster and cover ham with a stiff batter made of flour and water, being very careful to keep the shape of the ham. Roast until very tender. A dressing of stale bread may be made, or brown gravy is delicious to serve with the pork.

I hope this will be of help to someone, because I get so much enjoyment from the home department. I only wish more of the farmers' wives would write. Let us each do our share to make the home department interesting. Mrs. R. L. G.

Canning Hominy.

To the Editor:—Can any of the readers of this department give me a recipe for canning homemade hominy? I make it with soda and would very much like to can some for summer use, and I thought the best way to get a good recipe was to ask our home department readers.

When eggs are scarce try this cake recipe. One-half cup of carrots boiled until tender and rubbed through sieve. Blend one cup of sugar and one-third cup of shortening. Add one scant cup of milk alternately with two cups of flour, with which has been sifted one teaspoonful each cream of tartar and salt and one-half teaspoonful of soda. Flavor with one-half teaspoonful lemon extract. Bake carefully, as this cake burns easily. A Reader.

The Home Meat Supply.

To the Editor:—I have read in your paper so many different ways of taking care of meat, especially beef, that I would like to tell you of our way of doing this, and also of canning meat, which I think much easier than those of which I have read.

We generally kill our beef in the morning and get it into the house before it freezes. Then cut it into pieces ready for cooking and leave until the animal heat is all out. We then take a dishpan with salt in it and salt the pieces pretty well, shaking off all the loose salt. When this is done we pack it in a tight barrel, cover with a lid and put where it will freeze, and as long as it lasts the meat is good and fresh.

In canning beef, if I am cooking beef for dinner, I fill my kettle or roaster full and cook with plenty of water. Then I cut it in pieces that will go into a glass jar, filling it to within about two inches of the top. Then fill with hot broth and seal. The fat will come to the top and leave the broth below, and this helps to keep it. I can ribs and backbones the same way, leaving out the bones. Sausage, tenderloin and steak I fry with plenty of fat, and when done pack the meat in glass jars, pour boiling water into the hot fat, fill the jars and seal. I have used this method of canning meat for a good many years and the meat is always good and fresh. Mrs. M.

THE YOUNG FOLKS.

When Lincoln Was a Boy.

Dear Young Folks:—I have read the Young Folks' letters many times and enjoy them very much. You know what a great man Lincoln was. He was a great fellow to read books. When he was a boy if any of the neighbors had a book he was sure to borrow it. One of the neighbors had a book about Washington, and Lincoln walked three miles to borrow it and read it on the way home. He thought it was a very interesting book and he thought he might as well be a great man too. He read the book until midnight, then crawled up the ladder to the loft where he slept. He took the book with him and stuck it between two logs.

When he awoke in the morning he heard rain falling on the roof. He took the book and was going to read it, but it was wet. He went down the ladder, built a fire and dried the leaves. Then he took it back to the neighbor and said, "I am sorry the book is spoiled. How can I make it right with you?" And the neighbor said, "You may work for me three days and the book will be yours." So Lincoln pulled weeds and did other things to earn the book and he read it over many times and became a great man. —Carl.

He Went a Fishing.

Dear Young Folks:—I am going to tell you what happened to me when I was fishing at Haymeadow river. First I baited my hook, then threw it in the river. I put my pole on two crotches and went after some wood with three other boys When we came back one boy had a chub on his hook, the other two boys each had a sucker and I had a trout. But to my surprise he fell back in the water. The oldest boy of the three laughed at me and said that if he had that trout on his hook he wouldn't let it go. One day after that he lost two trout.

When it was getting dark we built a fire and the fish began to bite. When we stepped in our boat I slipped and fell into the water and got wet. The other boys pulled me out and we rowed home very fast. —Martin.

Loves Her Pets.

Dear Young Folks:—My mother died when I was seven months old and I have lived with my grandparents ever since. They are very good to me. They gave me a calf and I just love it because it is so good and gentle.

I have three pet rabbits and when I go out to feed them they stand up on their hind feet with their little hands turned down. I have a dog, too, and his name is Max. He will go after the cows. He is nine years old.

Someone has been asking for some recipes, so I will give one for cake. One cup of sugar, one egg, one cup of sweet milk, two teaspoonf ls of baking powder, one and one-half cups of flour, two tablespoonfuls of melted butter. —Pernie.

THE JANESVILLE MANUFACTURERS OF MACHINE CO. FARM IMPLEMENTS JANESVILLE, WIS.

"Plowed For 28c An Acre"

"AND it was mighty good plowing too," says Will Clark of Emerald Grove, Wis., when telling about his new Janesville Tractor Plow. "Turned everything clear under just like our Janesville horse plow. Our Janesville horse plow always pulled a horse lighter and I am glad to see you put the same proposition in your tractor plow."

JANESVILLE Tractor and Horse Plows

Manufacturers of Farm Implements

The secret of good plowing with these plows is in the flexible frame and the shape of the mouldboard. The first point to consider in either a tractor or horse plow is the frame. It must handle the plows properly; allow enough of a "floating" movement for the plow bottom to take away the pinch at the plow points. Then consider the mouldboard. It must curl the furrow smoothly—handle flow of soil with least pull on the team or drawbar. These features in Janesville plows account for their winning year after year in the famous plowing matches at Wheatland and Big Rock, Illinois; also for being able to use the same plow bottom in sticky loam, blue muck, clay, sod or stubble. As one owner says, "I can plow anywhere as good as in my best field."

Janesville Tractor Plows curl the furrow at any speed. Can be used with any tractor. Two or three bottoms. Plow 12, 13 or 14 inch furrows without changing plow bottoms.

This Book FREE

We specialize in building a limited line of farm machines for the more efficient type of farmers. Send for our catalog. Our line includes Janesville Tractor and Horse Plows, Corn Planters, Cultivators, Harrows, Listers, Weeders and Seeders. Also cotton tools for southern farmers.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for February 18, 1917.

Jesus Heals Nobleman's Son.

LESSON TEXT—John 4:43-54.

GOLDEN TEXT—As thou hast believed, so be it done unto thee.—Matt. 8:13.

This event occurred a few days after that of last Sunday's lesson It was Jesus' second miracle in Cana. John the Baptist is still preaching, and Jesus is closing the first year of his ministry and beginning his work in Galilee. Teachers should bring a vivid picture of Galilee to their classes, as that was one of the important fields to which our Master devoted much of his time. (For description see some good Bible distionary.) The people of that land were more wordly, less bound by conventionalities, and more accessible to the teachings which Jesus brought than those of Judea.

I. Supplication (Testing) vv. 43-49. Jesus left the revival at Samaria (vv. 39-44) and returned to Galilee. His own people of Nazareth refused to accept him "for a prophet hath no honor in his own country." It was in Galilee that he had his great victories. Here he was welcome (v. 45) because they had known the things that he did at Jerusalem, the report of which was brought back by those who had visited the feast (John 2:14-17). In Cana (Ch. 2:11) one came to him who was a king's officer, one who was used to command, and whose great personal need overcame any prejudice (Matt. 9:18; Luke 7:2). God uses afflictions oftentimes to drive us to him, and the most effective way to induce men to come to Jesus is to bring them to recognize their need which he alone can supply. The lad was "at the point of death," hence the father's journey of twenty miles from Capernaum to Cana, seeking help. We have here the weakness of faith indicated in verse forty-eight, in that the man would not believe except he should see signs and wonders. We have also the earnestness of the man in verse 49. "Sir, come down ere my child die." Man's extremity is ever God's opportunity. Not only extreme cases of sickness can be brought to him, but extreme cases of sin as well (I Tim. 1:15; Heb. 7:25). He can heal not only those who are "at the point of death" but those who are already dead (Eph. 2:1). The child was dying, the father had not strength to wait to see wonders, but he could and did trust Jesus to heal his son.

II. Surrender (Trusting) vv. 50-51. When the soldier took Jesus at his word, he surrendered his previous conception, and accepted the word of God; literally acting upon his belief. He went his way because he believed. He did not ask Jesus again to go to Capernaum. We must not confuse this kind of faith, however, with his having accepted Jesus as Savior. He accepted Jesus only as healer.

III. Satisfaction (Triumph) (vv. 52-54). The father's faith rose to the need for "he believed the word that Jesus spake." That word did not seem at all probable, but it was enough. The word of Jesus who is, himself, the truth, is a sure and more reasonable ground of faith than any amount of speculation. This father's walk from Cana to Capernaum was a walk of faith. He had nothing but a bare promise to support him, yet on his return he found his son living (v. 52). On this word of Jesus he, himself, believed, and his whole house.

IV. Suggestions (1) The living, personal presence of Christ is not needful. It was a wise provision of God's economy that Christ should have returned to heaven.

(2) Acts are the true indications of our faith. God's written revelation and the revelation of his son, the Living Word, and the witness of the experience of God's saints are sufficient facts upon which to base faith.

(3) Faith is progressive. Notice the growth from verses 48 to 50 and 53. At first the man believed in Jesus' power; then he believed in Jesus' word, and believed in Jesus, himself; then he reaches the highest point in that he does not believe alone, for his whole house believed with him.

(4) Faith is the source of all Christian gifts and graces. We have an advantage over these Galileans of nearly nineteen centuries of what Christ has wrought among the peoples of the earth among those who have believed on him.

Montana First in Grains

Rich virgin soil and a splendid climate have placed this great agricultural commonwealth in the lead for bumper crops. At the recent San Francisco Exposition, Montana won more prizes for quality and quantity of its grains than any other state in the Union.

The opportunities Montana offers ambitious men and women are unlimited. A 160 acre farm here means independence. For the past ten years the average yield per acre of wheat has been 25.85 bu., oats 44.63 bu., barley 34.61 bu., rye 22.25 bu., potatoes 149.40 bu., hay 1.82 tons. There's money in such crops.

The attention of the world has been directed to Montana by the astounding achievement of the *"St. Paul Road"* in placing under electrical operation its main line across the state. Much of the future development of Montana will be due to this great pioneer movement in railroading. New industrial activity, larger markets, higher land values, improved living conditions.

"On its simplicity, durability and ability, I stake my reputation as an engine builder."
WM. GALLOWAY.

PEER OF ALL 1917 ENGINES! I am originator of the direct from factory to farm method of manufacturing and selling gasoline engines.

KNOW THIS ENGINE and you will buy it—you will at least try it. Its design, the material from which it is built and the workmanship and finish and its low wholesale price demand that you compare the Galloway engine with any other engine on the market. That is what my customers have done and why our annual sales have run into the thousands upon thousands. If you pay more than Galloway's price it would only be paying too much. If you pay less you could not possibly be getting as good an engine. One could not be built for less.

1917 IMPROVEMENTS Include—adjustable bearings. Economy carburetor, worth $10 more on any engine, costs nothing extra on the Galloway—cuts down fuel bills. Valves in head exactly like high-class automobile motors. Double Ball governor, never sticks, regulates speed perfectly. Large, heavy, over-size flywheels. Large bore, long stroke, heavy-weight, perfect balance. Blue-hot spark magneto. Make and break Galloway igniter—easy to start—no cranking—needs no batteries. Cylinder and water pot frost proof.

GET THIS FREE BOOK NOW! Tells how to pick out, size up and judge an engine. Gives you engine secrets and facts. Tells why to insist on heavy weight, large bore, long stroke and low speed. Tell why we can sell at such low prices direct from our factory to farm or shop at wholesale. How to install an engine and hook up machinery. How Galloway engines are built. How to lay out and build a cheap, efficient power house. Saves you $250 in fitting up a farm power house. Ask today

FIVE SELLING PLANS—BACKED BY A BOND! I make it easy for you to buy a good engine on either cash or time payments. Cash, bank deposit, half cash half note, all note and installment. You can try a Galloway engine on your own farm—in your own shop—for an actual power test without expense to yourself, and buy on any one of these plans. A Galloway engine must prove to you—you to be the sole judge—whether or not it actually does everything we claim for it and satisfy you in every way. Ask for my book today. Engines shipped from our transfer houses at Council Bluffs, St. Paul, Kansas City, Chicago and from Waterloo factories. We are engine manufacturing specialists.

Wm. Galloway, Pres., Wm. Galloway Co., 35 Galloway Sta., Waterloo, Iowa

TOLD IN THE HILLS

By Marah Ellis Ryan

PART IV--One Squaw Man.

CHAPTER IV—Continued.

"I'm going to take the trail for the Kootenai village, if any white man is let reach it, or patch up the infernal blunder that's been made, I can do it with him," and his hand lay on the breast of the shrouded thing before him.

"If I get out of it alive, I'll be back to meet the Major; if I don't—and this time his significant glance was turned unmistakably to the blue coats and their leader—"and if I don't, you'd better pack your carcasses out of this Kootenai valley."

So, with a curse for them on his lips, and the dogged determination to save them in his heart, he nodded to Hardy, clasped the hand of Stuart, and turning Mowitza's head, started with that horrible burden back over the trail that would take a day and a night to cover.

The men were grateful for the bravery that had saved their lives, but burned under the brutal taunts that had spared nothing of their feelings. His execrable temper had belittled his own generosity.

He was a squaw man, but they had listened in silence and ashamed, when he had presumed to censure them. He was a horse thief, yet the men who believed it watched, with few words, the figure disappear slowly along the trail, with no thought of checking him.

CHAPTER V.
His Wife's Letter.

IN THE bosom of Rachel's family strange thoughts had been aroused by that story of Genesee's escape. They were wonderfully sparing of their comments in her presence; for, when the story came to her of what he had done when he left her, she laughed.

"Yet he is a horse thief," she said, in that tone of appreciation that expresses praise, "and he sent me his glove? Well, I am glad he had the grace to be sorry for scattering me over the floor like that. And we owe it to him that we see you here alive again? We can appreciate his bravery, even say prayers for him, if the man would only keep out of sight, but we couldn't ask him to a dinner party, supposing we gave dinner parties, could we, Tillie?"

And Tillie, who had impulsively said, "God bless him!" from the shelter of her husband's arms, collapsed, conscience-stricken and tearful.

"You have a horrid way, Rachel, of making people feel badly," she said, in the midst of her thankfulness and remorse; "but wait until I see him again—I will let him know how much we can appreciate such courage as that. Just wait until he comes back!"

"Yes," said the girl, with all the irony gone from her voice, only the dreariness remaining, "I'm waiting."

The words started Tillie to crying; for, in the recesses of her own bosom, another secret of Genesee's generosity was hidden for prudential motives—the fact that it was he who had sent the guide for Rachel that terrible night of the snow. And Tillie was not a good keeper of secrets—even this thoroughly-wise one was hard to retain, in her gladness at having her husband back!

"The man seems a sort of shepherd of everything that gets astray in these hills," said Lieutenant Murray, who was kindly disposed toward all creation because of an emotional, unsoldier-like welcome that had been given him by the little non-commissioned officer in petticoats. "He first led us out of that corral in the hills and brought us back where we belonged, and then dug up that dead Indian and started to take him where he belonged. I tell you there was a sort of—of sublimity in the man as he sat there with that horrible load he was to carry; that is, there would have been if he hadn't 'cussed' so much."

"Does he swear?" queried Fred.

"Does he? My child, you would have a finely-trained imagination if you could conceive the variety of expressions by which he can consign a citizen to the winter resort from which all good citizens keep free. His profanity, they say, is only equaled by his immorality. But, ah—what a soldier he would make! He is the sort of a man that men would walk right up to cannon with—even if they detested him personally."

"And a man needs no fine attributes or high morality to wield that sort of influence, does he?" asked Rachel, and walked deliberately away before any reply could be made.

But she was no more confident than they of his unimpeachable worth. There was the horse thieving still unexplained; he had not even denied it to her. And she came to the conclusion that she herself was sadly lacking the material for orthodox womanhood, since the more proof she had of his faults, the more solidly she took her position for his defense. It had in it something of the same blind stubbornness that governed his likes and dislikes, and that very similarity might have accounted for the sort of understanding that had so long existed between them. And she had more than the horse stealing to puzzle over. She had that letter he had thrust in her hand and told her to read; such a pleading letter, filled with the heart sickness of a lonely woman. She took it out and re-read it that time when she walked away from their comments; and reading over the lines, and trying to read between them, she was sorely puzzled:

Dear Jack: I wrote you of my illness weeks ago, but the letter must have been lost, or else your answer for I have not heard a word from you, and I have wanted it more than I can tell you. I am better, and our little Jack has taken such good care of me. He is so helpful, so gentle; and do you know, dear, he grows to look more like you every day. Does that seem strange? He does not resemble me in the least. You will think me very exacting, I suppose, when I tell you that such a child, and such a home as you have given me, does not suffice for my content. I know you will think me ungrateful, but I must speak of it to you. I wrote you before, but no answer has come. If I get none to this, I will go to find you—if I am strong enough. If I am not, I shall send Jack. He is so manly and strong, I know he could go. I will know then, at least, if you are living. I feel as if I am confessing a fault to you when I tell you I have heard from him at last—and more, that I was glad to hear!

Jack—dear Jack—he has never forgotten. He is free now; would marry me yet if it were possible. Write to me—tell me if it can ever be. I know how weak you will think me. Perhaps my late ill health has made me more so; but I am hungry for the sound of the dear voice, and I am so alone since your father died. You will never come back; and you know, Jack, how loneliness always was so dreadful to me—even our boy is not enough. He does not understand. Come back, or write to me. Let my boy know his father, or else show me how to be patient; this silence is so terrible to Your Wife.

Jack, what a mockery that word looks—yet I am grateful.

This was the letter he had told her to read and give to Stuart; if he never returned; but she gave it to no one. She mentioned it to no one, only waited to see if he ever came back, and with each reading of that other woman's longings, there grew stronger in her the determination that his life belonged to the writer of that letter and her child—her boy, who looked like him. Surely there was a home and an affection that should cure him of this wild, semi-civilized life he was leading. She was slipping away that almighty need he had shown of herself. She grimly determined that all remembrance of it must be put aside; it was such an unheard-of, reasonless sort of an attraction anyway, and if she really had any influence over him, it should be used to make him answer that letter as it should be answered, and straighten out the strange puzzles in it. All this she determined she would tell him—when he got back.

(To be continued.)

Want to buy or sell a farm? Make it known by inserting an advertisement in THE FARMERS' MARKET. Six cents a word each insertion.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Injured Teat.

Would like to have you tell me what to do for my cow. She cut one of her teats on barbed wire and it healed up but left a hole and now the milk runs out alone from this hole.

Your cow is troubled with a fistulas tract in her teat. The only way to remedy this is for your veterinarian to operate on this when the cow is dry, but the best thing is to fatten and sell her.

Paralysis.

One of my hogs is weak in his hind legs so that he cannot stand on them. He weighs about 200 pounds and he eats and drinks well. I feed him corn three times a day and oil meal and tankage and salt mixed twice a week, and he gets all he wants to drink. I would be very glad to get some information as to what may be the matter with him and what to do for it.

This trouble probably comes from feeding heavily of food rich in fat. Change feed gradually to oats and do not feed such rich slops and the trouble may disappear.

Abortion.

Can you tell me what to do for cows that have their calves before time?

Some headway may be made in combating this disease if one is diligent in his efforts. The disinfectant method, which has so often been referred to in these columns, has proven most beneficial. The local veterinarian should be called to start you out right in this line of treatment. Those animals that have not aborted should be removed from lots and pastures where affected ones are. All aborted material should be burned and the premises thoroughly disinfected. The bull should be subjected to a sheath disinfection both before and after serving a cow of such a herd. One must put in some time and real, earnest labor if he wishes returns for his trouble. The use of a vaccine is claimed by some to get results as a preventive.

Warts on Calves.

Can you tell me what to do for warts on calves?

You do not state the nature of warts present, hence it would be hard to prescribe. If they are just common warts try the use of castor oil, this to be applied directly to the wart. They may also be cut off with sharp scissors, or even caustic can be applied, but this should be applied by one familiar with it.

Leucorrhea.

I have an old mare that has never, to my knowledge, had a colt. I bred her several times, but she fails to catch. Now she is discharging a whitish substance, as much as a pint a day. She eats well and in every way seems to be all right.

The mare probably never will breed. She is troubled with a chronic trouble no doubt. Treatment should consist of the use of tonics (as sulphate of iron, three drams daily on feed) and washing out the womb and vagina with a solution composed of lysol, two teaspoonfuls; tannic acid, one-half dram; water, one quart. This may be repeated two or three times a day.

Injured Carpus (Knee).

I have an eight-year-old mare that ran away, fell and cut one front knee joint to the bone. I washed it and dressed it and it didn't heal for about six weeks. I used liniments and different remedies. It formed pus and ran. It is healed now, but she is lame and around the joint it is swollen quite large and seems as solid as a bone, and is sore. Can you tell me what to do for it?

The periostium covering the bone has probably been injured in this region, causing an excessive growth of bone. Blister the affected parts with some good veterinary blistering agent and repeat in two or three weeks. This may take away the soreness, but probably part of the enlargement will always remain.

Infection From Kick.

We have a horse that was kicked about the first of October in the knee of the hind leg. At first there was just a small hole that you could scarcely see, and then it began to swell. A veterinarian cut it open and made another hole right under the first one. A great deal of matter came out. Now it is swollen up higher and three holes sprang open, so now there are five holes in the leg. If we force water in any of the holes it will run out all five. We clean it with creolin and matter still comes out. Could you tell us what to do? Could we use carbolic acid, and how?

The knee is the stifle joint in a horse. It is probable that the injury was of such a nature that it caused quite an infection, which has become metastatic in nature. You did not say whether the animal was much lame or not. Clean the parts well and inject tincture of iodine in the parts. Repeat in two or three days. Yes, you can use carbolic acid, but do not use stronger than 2 per cent solution.

Cough and Thumps in Pigs.

Please tell me what ails my September pigs weighing about seventy-five pounds each. They seem to have a bad cough and I have been unable to stop it. They look well and eat well, but they cough so hard that they get thumpy. I lost one some time ago and one got well. Now two more have the thumps. I am feeding only a little corn and good rich slop of oil meal and chop feed. I use a feed cooker to take the chill off the slop but do not warm it. They have good sleeping quarters, have dry bedding every day or every other day, and are separated into lots of ten or twelve at night so they do not pile up to speak of. Please tell me what I can do for those with the thumps and also those with the cough.

It would be hard to say what is causing the cough in the pigs, as there are so many causes for cough. However, the cause of the thumpy condition is probably indigestion. Cut down on your rich slops and feed some oats for a while, and the thumps will probably cease.

Exostosis Below Knee.

I have a young driving mare that has a little lump on her front leg just below the knee. It isn't very big and seems to be as hard as the bone itself. It does not hurt her any and I do not know what could cause it. I have been driving her single some, but very little. Could you tell me if it is anything serious?

This is probably a bony growth brought about through some inflammation. If it does not injure the animal we would advise you to leave it alone.

Stricture.

Could you tell me the cause and give me a cure for the following ailment in my cow which has come on since she was fresh? She has one teat where the milk does not flow readily. I must squeeze the milk from the bag into the teat before milking it. Last year she occasionally gave bloody milk.

This teat is probably strictured to some extent. As to treatment, you might get some results from the use of a milk tube. The tube should be thoroughly sterilized with boiling water before using and you should be careful not to injure the teat when inserting the tube.

Persistent Sore From Injury.

When our pony was thirteen months old we tied a bell on his halter. He ran in the pasture with this bell and after about two months we noticed there was a sore under the bell. We took off the bell and the sore started to heal up. Whenever anything touches the sore he starts to scratch it again so that it does not get very much better, but rather worse.

Such sores are sometimes troublesome to heal. Try the application once daily of tincture of iodine to the sore. Do this for a few days and keep the animal from rubbing the sore. If it does not heal then you had better consult a veterinarian.

A Bee-Line to Everyone

Straight as the bee flies and quick as though caught by lightning the voice in the telephone carries near and far over this Nation.

This marvelous instrument is the pre-eminent vehicle of speed and speech. Railroads cover the country, but your traveler often must alight with bag and baggage and change trains to get to a given point. Railroads reach cities, towns and villages. The telephone reaches the individual.

The telephone offers continuous passage for the voice and unbroken connections to the uttermost places because it is a united System co-ordinated to the single idea of serving the entire people of this country.

It has been a powerful factor, along with the transportation systems, in the magnificent achievements of the United States—helping to prepare the way where latent possibilities of mines, forests and farms were to be developed.

The continued growth of our national prosperity depends in a great measure upon the maintenance and continued growth of the utilities which furnish the means of intercourse and interchange. They are the indispensable servants of the individual, the community and the entire nation.

Benefits From Soil Examination.

Farmers of Rock County Well Pleased With Work of W. W. Weir, of Wisconsin Station—By Allen B. West.

SOME of the Rock county farmers have taken advantage of the offer of the Wisconsin College of Agriculture and had their soils tested in the State Soils Laboratory. They have derived such benefit from it that they are recommending other farmers to take advantage of the same offer. If five farmers in the same town make application for a soil survey, a man will be sent to the farms to take samples. These samples will be sent to the laboratory at Madison and each farmer will, when the list has been made, receive a report and with it a letter, advising what the soil needs and how to build it up. The cost to each farm where five unite in the town is $3. Where a man is sent to one farm alone the cost is $5.

Below is given a copy of a report for a farm in the vicinity of Janesville, given here because it is believed it will be helpful to other farmers. The report is made by W. W. Weir, of the Wisconsin station:

Topography of Farm—Generally rolling.
Drainage—Generally good.
Type of Farming—Dairying.

Soil Samples Collected.

Two samples of soil were collected from this farm. No. 1 (light colored silt loam) was taken from the north grain field. This sample represents the higher land which has long been cropped. Sample No. 2 (black silt loam) was collected from a cornfield on the flat. This sample represents the alluvial soil deposited by streams in years gone by. Both of these samples were analyzed as indicated in results below:

Sample No. 1, Nitrogen, 0.07 per cent; phosphorus, 0.06 per cent; potassium, 0; acid.

Sample No. 2, nitrogen, 0.28 per cent; phosphorus, 0.08 per cent; potassium, 0; strongly acid.

Analysis and examinations interpreted.

General Remarks.

This report is written from the standpoint of the future improvement of the soil examined. The recommendations herein given point out the method of improvement and give the outline whereby the fertility of the soil may be maintained and improved in the future. Recommendations, therefore, given in this report are not for one year only, but for the future. The three most important elements that farm crops require for their best growth and development are nitrogen, phosphorus and potassium.

Without nitrogen plants will not grow. Nitrogen is considered the most important plant food element and is required by all crops in producing growth.

The next important element is phosphorus. In the average soil, the supply of this very important plant food material is not large, and for this reason attention should always be given to the maintenance of this soil constituent. It is that element which is used by all plants, especially in the development of grains and seeds.

Potassium is the third element very essential for all crops. Soils of the character as is represented by these two samples usually contain an inexhaustible supply, and for this reason, these samples were not examined for potassium. The test for acidity tells whether or not the soil is in need of lime.

Discussion of Analysis—Sample No. 1.

The soil represented by this sample is very typical of long-cropped fields in southern Wisconsin. Originally these soils contained a good supply of all the plant food elements including lime. In other words, the soil was then balanced concerning its fertility and contained large amounts of easily soluble plant food material. For this reason crops grown on these lands in the early days were exceptionally good. The grain raised there grew on long straw, which stood up until it was cut. Now, after many years of cropping it is very evident from the results produced that there is something wrong—there is something gone out of these soils which the crops need. This particular soil shows a lack of nitrogen. Seven-hundredths of 1 per cent is to be considered a very small amount of this element. As a rule highly productive soils of this character contain on an average about twenty-five-hundredths of 1 per cent. Thus we see, as far as the nitrogen of this soil is concerned it may be considered hungry for nitrogen and humus.

The fact that this soil is rather light colored indicates low humus content, and since the humus is low the nitrogen also is low. This condition can be best corrected through the use of clover. The plowing under of a good clover sod (and now and then a clover crop) will go a long way in improving this soil as regards the nitrogen and humus supply. It would be well to throw this particular field into a three-year rotation, such as corn, grain, clover, so that clover sod and a second growth of clover may be plowed under at least once in three years.

In order to succeed best with clover it is necessary that this soil should be limed. The acidity present will do a great deal of harm, in that it will prevent the maximum growth of clover, and also will produce "unsanitary" conditions which will hinder maximum production of grain and corn. A two-ton application of pulverized limestone per acre is recommended—this to be thoroughly mixed with the soil when it is applied. It would be a good plan to apply the lime to the corn land, so as to double the lime to destroy the acidity before clover is seeded.

The phosphorus supply as indicated by six-hundredths of 1 per cent may be considered a fairly good supply or reserve from the standpoint of potential fertility, but so long as the soil remains acid and the nitrogen and humus supply is so very low, this phosphorus supply is in a more or less "tied up" condition. It is reasonable to believe, therefore, that crops suffer for the want of available or soluble phosphorus to produce maximum crops. The potassium content was not determined since soils such as are found on this farm contain sufficient amounts of this element. When other conditions in the soil are favorable, such as concerning acidity and the nitrogen and humus supply, the potassium supply generally takes care of itself.

Recommendations for Improving This Soil.

The first step to be considered in the improvement of this soil is liming. This will destroy the acidity and put the soil in better condition to grow clover. When this is accomplished, the next step in its improvement concerns the phosphorus supply. For the first few years, especially soluble phosphate such as is contained in acid phosphate, should be used at the rate of at least 500 pounds per acre for corn and about 300 pounds for grain. When applied to corn it may be mixed with the manure. The applications recommended here are not sufficient to increase the phosphorus supply of the soil, but rather to help the crops in getting the phosphorus they require. In this way, the draft upon the phosphorus reserve of the soil is lessened and in turn there will be created in the soil a greater supply of available phosphorus. The average phosphorus content of fertile soils of this character is approximately one-tenth of 1 per cent. It is not necessary to increase the phosphorus content of the soil up to that per cent before you can realize maximum growth. The recommendations herein given will provide for an immediate supply, and if this practice is continued little difficulty will be experienced in crop productions on account of lack of phosphorus.

The lime and phosphorus applications will greatly promote the growth of clover. This in turn will produce better sod and deeper roots and more second growth. Thus after these treatments are made, and, as three-year rotation is practiced, a great deal more humus in the form of roots and so on will be plowed under. Continue this for some time and good results will be secured. Farmers who have practiced similar methods as outlined herein have been well compensated for all their trouble.

Sample No. 2.

The soil represented by this sample has a good nitrogen reserve and a very good phosphorus content. The potassium content is to be considered good also.

The weak point concerning this soil is its high degree of acidity. As an initial application, at least two tons of finely ground limestone should be applied per acre. Since this soil is so strongly acid, the benefits derived from the application of lime will not be very great for the first few years after application. It will take some time for the lime to act and to correct this acid condition which has been the result of many years of leaching. The immediate effect of liming will manifest itself in the clover crop and indirectly in other crops such as grain and corn.

It is important to remember that this soil requires the addition of humus in the form of clover sod in order to maintain a high producing power. Even though this soil does contain a high nitrogen content it does not mean that no attention whatever should be given to this element. Organic matter, such as clover sod which can easily rot in the soil, is what this soil will need above anything else to maintain its fertility. The application of lime will greatly benefit the clover grown on this land.

Do American Principles Stand for Justice?

FROM childhood you have heard it preached that in America there is protection—*equality* of protection. Every citizen knows that, ever since there has been an American government, the institutions and laws of every state have provided that property shall not be injured or destroyed without just *compensation.*

There has been an inherent honesty in this. Nor has there been any complaint against it by any fair-minded citizen.

When the cattle of farmers are killed in order that disease might be wiped out, *compensation* is made.

If firemen are compelled to blow up *your* building so that a conflagration may be checked, *you* are fully and honestly *compensated.*

Then, is it any more than fair, just and honorable that other private industries which employ labor, consume great quantities of raw materials supplied from the farms and pay a greater share of the public taxation than any other should be *compensated* for their losses when such industries are destroyed by the vote of the people?

Should any class of individuals or any industry be discriminated against?—have *lesser* rights within the law?

If you are a fair-minded individual, you *must* endorse the principles of just *compensation* without *discrimination.*

Destruction or confiscation by means of legislation without *compensation* is diametrically opposed to the great fundamental American principle of justice and equal rights for all.

Put yourself on record as in favor of *just* compensation for one and all alike.

NEWS OF THE SALE RING

Dunbar Holstein Dispersion.

The dispersion sale of the Holstein herd of Harry Dunbar, held Tuesday, January 30th, at Elkhorn, Wis., was another demonstration that there is a big demand for registered Holsteins of the right kind. The sale was held on the farm and a large crowd attended. It is estimated that there were more than 500 people present. Bidding was brisk. James McKone, of Green Bay, Wis., paid the top price at the sale when he took No. 14 at $800. He bought eight head of females and one bull, paying good prices for them all. Mr. Fred Southcott, manager of the Gustav Pabst Farm at Dousman, Wis., was present and took four exceptionally good animals. A. P. Kaye, Walworth, Wis., one of Wisconsin's leading breeders purchased two females at $500 and $475, respectively. It was a right good sale throughout and young breeders should feel encouraged by the success which Mr. Dunbar has achieved.

Swine Sale At Madison.

The first sale of registered swine held at Madison was a grand success in every respect and those that had the sales in charge are to be congratulated on the efficient manner in which the sales were conducted. The Duroc men had the stage in the afternoon and a throng of people were in the pavilion to see the show—some were spectators, of course, but we are glad to know that they showed enough interest in better swine and what the breeders of the state are doing for the hog industry in Wisconsin. The breeders are to be congratulated on the good hogs they consigned to this sale.

THE DUROCS.

Lloyd Seely opened the Duroc sale in a very fitting manner and made many friends among the breeders by his high-class salesmanship. The top of the sale was an Atwater entry, same going to Riley Martiny & Son at $175. Some wonderful sows and gilts were sold, well grown and well bred and there was no lack of bidding when the best ones entered the ring. It was a great lesson to the beginner and showed conclusively that the good sows are the best to buy, for their produce commands the top prices. While the Durocs were being sold the Poland men attended to the hogs that were being sold and in this manner the Duroc men had an opportunity to buy if they so desired. While the Polands were being sold the Duroc men handled the sale. The two breed associations worked hand in hand, a very fitting manner. The average on the Durocs was a few cents less than $80. As mentioned above, all connected with the sale were very well satisfied with the outcome, yet no sows sold at an exorbitant price, it was a clean sale in every respect.

O'Brien, Madison, Wis., $75; 16, Ralph Wheeler, De Forest, Wis., $60; 17, J. B. Wilkinson, Waupun, Wis., $40; 18, C. F. Lally, $70; 20, M. O'Keefe, $90; 21, Mercer Bros., Spring Green, Wis., $50; 22, C. F. Lally, $80; 23, August Jerke, Blue Mounds, Wis., $77.50; 24, G. W. Beck, Bloom City, Wis., $72.50; 25, F. W. Rodgers, Beaver Dam, Wis., $105; 26, Ludwig Larson, $90; 27, F. W. Rodgers, $95; 28, E. G. Kreuger, Ixonia, Wis., $82.50; 29, A. H. Miller, $62.50; 30, A. L. Gabler, Highland, Wis., $40; 31, F. G. Crothers, Kilbourn, Wis., $42.50; 32, Lawrence Weimers, Rochester, Wis., $55; 33, H. E. Brandon, Brandon, Wis., $65; 34, John Fisher, Janesville, Wis., $77.50; 35, Allic Knudson, Brodhead, Wis., $130; 36, H. E. Braatz, $102.50; 37, Herman Schoen, Manawa, Wis., $105; 38, Ed Bruins, Fairwater, Wis., $80; 39, Lawrence Weimers, $65; 40, Herman Schoen, $80; 43, C. F. Lally, $62.50; 44, W. F. Wrenk, Sun Prairie, Wis., $45; 45, F. R. Constance, Waupun, Wis., $112.50; 46, W. C. Jenkins, Bangor, Wis., $67.50; 47, C. A. Peterson, Rosendale, Wis., $140 ;48, J. W. Thomas, West Bend, Wis., $112.50; 50, E. Bartholomew, Fennimore, Wis., $65; 51, C. W. Carnes, Mazomanie, Wis., $82.50. Summary: 47 head sold for $3,717.50; average, $79.75.

THE POLANDS.

There was an even larger crowd in attendance at the night sale than there was in the afternoon. Some very timely remarks were made before the opening of the sale by Professors Tormey and Fuller and Messrs. Ray Davis and L. P. Martiny. Ira Cottingham opened the Poland sale and worked hard for the success of the sale. The Poland breeders had their offering in excellent condition and many sows were sold that cannot be duplicated at the prices they brought. The top of the Polands was an aged sow from the McDonald herd—a large, smooth sow purchased by Wm. Smiley & Son at $162.50 and she was a good buy at that figure. The top gilt also came from the McDonald herd and went to W. W. Quackenbush at $140. The Poland breeders were well organized and showed great team work and co-operation. The Polands made an average of $81. We are glad to call your attention to the two sale averages—only $1 difference in the two sales. You can judge for yourself which breed is the best for your surroundings.

No. 1, W. W. Quackenbush, Melrose, Wis., $125; 2, R. G. Williams, Cambria, Wis., $55; 3, Columbia Co. Asylum, Wyocena, Wis., $65; 4, A. Nuseman, Warren, Ill., $72.50; 7, W. W. Quackenbush, $140; 41, Dobson & Eastman, $132.50; 42, Smiley & Son, $162.50; 43, Jas. Derivan, $60; 44, Art Anderson, Morrisonville, Wis., $92.50; 45, R. G. Williams, $62.50; 46, J. H. Peterson, $60; 47, A. W. Cole, Lodi, Wis., $52.50; 48, O. Onsrud, Stoughton, Wis., $55; 49, J. H. Peterson, $75; 50, A. Bergem, De Forest, Wis., $60. Summary: 48 head sold for $3,881; average $80.85.

Madson's Poland China Sale.

There was a large crowd of people at the Poland China sale of M. Madson & Sons, Madison, Tuesday, February 6th. The animals were in fine condition and were a credit to this progressive firm. It was evident that many of those present were waiting for the offering at the consignment sale to be held the day following. The tops in the sale were picked up at good prices and were quickly sold. Most of the choice animals started at $50 and above. The top animal, Lady Price, brought $97.50 and went to F. Rasmussen, Neenah, Wis., who also took several of the other good ones. There was a marked demand for gilts due to farrow early and those due to farrow late in April were discounted heavily, which is an evidence that it was the breeders who were bidding. A detailed report is given below:

No. 1, F. Rassmussen, Neenah, Wis., $55; 2, Frank Roelke, Dane, Wis., $42.50; 3, F. Rassmussen, $97.50; 4, R. W. Nieman, Appleton, Wis., $62.50; 6, Martin Haugen, Stoughton, Wis., $37.50; 7, Lee Eastman, Lancaster, Wis., $55; 8, Wm. Black, Dallas, Wis., $60; 9, Louis Weber, Dane, Wis., $40; 10, Louis Weber, $42.50; 11, Wm. M. Richards, Lodi, Wis. $40; 12, Ed Schoenberg, Rosswell, Wis., $47.50; 13, P. S. Arthur, Cottage Grove, Wis., $37.50; 14, L. Lemon, Madison, Wis., $40; 15, 16, John Beal, Madison, Wis., $35; 17, Wm. Black, $60; 18, A. F. Gafhe, Jefferson, Wis., $37.50; 19, Ed Richardson, Madison, Wis., $40; 21, Chas. O'Neill, Bridgeport, Wis., $47.50; 24, Dr. A. S. Alexander, Madison, Wis., $40; 25, A. F. Gafhe, $37.50; 26, L. Lemon, $40; 27, E. J. Elvelhjim, McFarland, Wis., $45; 28, John Slater, Madison, Wis., $50; 29, G. A. White, Marshall, Wis., $47.50; 30, R. Martin, $47.50; 31, John Slater, $45; 32, A. W. Cole Lodi, Wis., $72.50; 33, Louis Jewellin & Son, Waterloo, Wis., $57.50; 34, R. M. Hudson, Mazomanie, Wis., $65; 35, M. H. McDowell, Waupun, Wis., $57.50; 36, John Beal, $35; 37, Mandt Bros., Madison, Wis., $32.50; 38, Carl Bargang, Watertown, Wis., $52.50; 39, J. E. Showers, Cottage Grove, Wis., $40; 40, John Beal, $35; 41, John Beal, $40; 42, E. E. Richardson, Madison, Wis., $45; 42, J. Crandston, Beloit, Wis., $35. Summary: 39 head sold for $1,812.50; average $46.50.

Cook-Scheibe-Vaughn Chester White Sale.

The Cook-Scheibe-Vaughn Chester White sale held February 5th at Burlington, Wis., although not a record maker, can be considered very good. Weather conditions were very unfavorable. The day preceding witnessed one of the worst blizzards ever had in Wisconsin. Trains were discontinued on many of the lines from the north on main lines and practically all branch lines were out of commission. Owing to these facts the crowd was not what it would have been otherwise. As the following report shows the majority of the animals were sold in the vicinity of Burlington, although a few were sold to breeders in the southern part of the state.

CONSIGNMENT OF COOK BROS.

No. 1, Andrew Van Halen, Burlington, Wis., $31; 2, H. Newell, Burlington, Wis., $33; 3, Geo. Beck, Burlington, Wis., $31; 4, Ed Subrod, Burlington, Wis., $35; 5, Wm. Fisher, De Forest, $30; 6, A. A. Gehrand, Waterford, Wis., $41; 7, Truman Davis, Delavan, Wis., $51; 8, J. C. Jensen, Franksville, Wis., $34; 9, E. B. Adams & Sons, Racine, Wis., $40; 10, Walworth County Farm, Elkhorn, Wis., $37.

CONSIGNMENT OF W. W. VAUGHN & SON.

No. 11, J. C. Jensen, $44; 13, (Sub.) A. Crane, Burlington, Wis., $45; 14, Walworth County Farm, $41; 15, A. Crane, $31; 16, A. Crane, $30; 17, A. Crane, $28; 18, A. Crane, $28; 19, A. Crane; 20, John Peterson, Union Grove, Wis., $26; 21 A. Crane, $20.

CONSIGNMENT OF W. C. SCHEIBE.

No. 23, J. C. Christian, Burlington, Wis., $42; 24, A. F. Klaehn, Burlington, Wis., $33; 25, Ernst Scheibe, Burlington, Wis., $41; 26, Joe Yanny, Burlington, Wis., $42; 27, Geo. Beck, Burlington, Wis., $33; 28, John Conrad, Hales Corners, Wis., $38; 29, Julius Scheibe, $34; 30, L. J. Cummingham, Burlington, Wis., $34; 31, Julius Scheibe, $37; 32, Julius Scheibe, $36; 33, Ernest Scheibe, Elkhorn, Wis., $44; 34, Bruce Westcott, Barton, Wis., $40; 35, Carl Hickcox, Spring Green, Wis., $66; 36, R. T. Wiswall, Spring Prairie, Wis., $57.50; 37, Sheldon Burch, Winnebago, Ill., $58; 38, Walworth County Farm, $37.50; 39, W. E. Wagner, Ft. Atkinson, Wis., $34; 40, Ernst Scheibe, $59; 41, Walter George, Evansville, Wis., $60. Summary: 39 head sold for $1,506; average $38.61.

The Thompson Holstein Sale.

The dispersion sale of Holsteins held at Argyle, Wis., January 30th by T. A. Thompson was very satisfactory, everything taken into consideration. The day was clear, but cold and the sale being held out of doors wasn't conducive to high prices or spirited bidding. While the cows did not bring high prices, the young animals, especially the young bulls brought good prices, considering the breeding and records back of them. No work had been done on the cattle up to the day before the sale, so the buyers purchased them with their "working clothes" on. E. C. Eells, Winslow, Ill., did the selling and G. H. Truckell, of the Holstein Sales Co., Elgin, Ill., was the manager and in the box. The total of the sale was $4,385—top $227.50.

Dispersion of the Bell Croft Holsteins.

A HOLSTEIN sale worthy of your attention will be held at Burlington, Wis., Wednesday, March 7th, at which time J. A. Forge will sell his entire herd of 48 pure-bred Holstein cattle. One of the attractions will be Portage Pauline King 73779, a fine son of the noted King Walker (55 A. R. O. daughters' whose dam and grandam average over 30 pounds in seven days. Dam of bull is Portage Paul 2d, 31.17 pounds, seven days. There will be many features in the sale. Eleven daughters sired by a 31-pound sire. Four daughters and 13 granddaughters of the noted King Walker. Six daughters of Jewel Paul 16th whose dam is a daughter of Sir Johanna De Kol, 67 A. R. O. daughters and a sister to Johanna De Kol Van Beers 40.07. Five daughters of other good sires, including two granddaughters of Pietertje Hengerveld Count De Kol, 99 A. R. O. daughters. Two daughters of Portage Pauline Paul 2d. This is only a few of the good record cows that will be sold, space does not permit us to feature each one individually. We simply mention that few sales of the season will contain cows better individually or with more desirable A. R. O. backing. Every cow in the herd, of milking age, has an A. R. O. record, but two. These records have been made by Mr. Forge under ordinary farm conditions. The cows are large, of a uniform type and with wonderful udder development. Ever thing free from tuberculosis and a 60-day retest guarantee will go with every animal sold. Make arrangements now to attend this sale, you will not be disappointed with the offering. The catalogs are now ready. Notice the advertisement in this issue and write at once for a catalog. Please mention The Wisconsin Farmer.—Adv.

Thirty-three-Pound Blood.

EDGEWOOD FARMS, INC., Pewaukee, Wis., are now offering for the first time, bull calves from their junior herd sire, Pabst Pontiac Hengerveld De Kol. This bull is a grand individual, seemingly made to order. He weighed 1,500 pounds when he was two years old, has a strong masculine head, back as straight as a line, broad hips, rump long, wide and square. He has a long barrel and well sprung ribs. He is a strong, vigorous fellow and growing better, if possible, right along. He is sired by King Pontiac Champion, that is sired by King of the Pontiacs, and out of Maid Mutual De Kol, 31.30 pounds. His dam is Edith De Kol Burke Hengerveld, the highest record daughter of De Kol 2d Butter Boy 3d. She has one record of 31.16 pounds in seven days, and has a yearly record of 845.10 pounds butter and 20,105.10 pounds milk. She has since made a seven-day record of 33.858 pounds butter and 644.1 pounds milk, testing 4.21 per cent. She has a daughter that is the dam of a 31-pound three year old. She has proven herself to be a producer and a cow whose offspring make good. Pabst Pontiac Hengerveld De Kol comes of breeding that entitles him to the place he holds, namely as head of one of the good herds of Waukesha county. He is at the head of a herd that will be given every opportunity to make good and all of his heifer calves will be retained and tested. He is sure to be heard from. Write Edgewood Farms for prices and pedigree of his calves before the price goes up. See page 35.—Adv.

Storage Battery Care.

MOTORISTS agree that the battery is a vital part of a car. A dead battery means a dead car. Electricity is the car's spark of life—it starts the engine, it furnishes the impulse for every stroke and at night it lights the lamps. A strong, full flow of electricity requires a good battery, that gets careful attention. If you are a car owner or driver you will want to know the best way to care for the battery in order to get the most efficient service from it. An excellent source of information along this line are the Battery Health Books issued by the Willard Storage Battery Co., Cleveland, Ohio, makers of storage batteries that are used by more than four-fifths of all motor car builders. Read their advertisement on page 11. You may also be interested in the Willard Hydrometer, mentioned in the advertisement, which is used to find the condition of a battery's charge. It will be sent postpaid upon receipt of a dollar bill.—Adv.

Hampshire Breeders—Attention!

THE opportunity for Wisconsin Hampshire breeders to get some new blood will present itself in the dispersion sale to be made by F. O. Tanner, Brownsdale, Minn., Friday, February 23d. Mr. Tanner has been breeding Hampshires for the past ten years and those that have been following this breed are aware of the fact that animals from this herd have been consistent winners at the Minnesota State Fair for several years past. Last year the grand champion sow was owned and shown by Mr. Tanner and, by the way, she and several of her produce will be sold in this sale. Broow sows that have made good will sell. Herd boars of cho' e breeding will be closed out at this time. Mr. Tanner has made money with the Hampshires and others can do the same. Circumstances have made this move necessary and inasmuch as he has rented the farm all the hogs will be sold on the above date at Brownsdale. The catalog will give you the desired information. This breed is somewhat new to many Wisconsin farmers. Write for the catalog, get interested in better swine and, if possible, attend the sale. In writing please mention The Wisconsin Farmer. See page 35.—Adv.

Remember the Smiley Poland Sale.

THIS is the last opportunity we have to call your attention to that good Poland China sale to be held at Albany, Wis. Febrcary 22d. The Smileys have the goods this year and you will be pleased with the hogs they are selling. The sows and gilts are in nice condition, have the length and size so desirable at the present time and they are bred to good boars that will please the most critical. One of the good things in the sale is a daughter of Major Miller out of a Hadley Girl dam. The Hadley Girl strain has proven to be the most valuable strain that the Smiley's have ever owned. A daughter of Big Bone Jumbo will be one of the attractions in the sale. No doubt the two gilts sired by Goldengate King will be the attractions of the sale, for this breeding is very popular at this time. They were farrowed March 9, 1916, and are out of Big Maria by Dorr's Black Model, both are bred for a March litter to Major Miller. The Smileys have used good herd boars in the past and they have good boars in the herd at the present time. Remember Monarch, Major Miller, Wisconsin Jumbo 2d, Smiley's King, they are boars that will appeal to you if you want the big kind that have quality. The catalog gives you the desired information and you will notice that they are selling the best lot of gilts they ever cataloged for a sale. This firm is deserving of your support for they have the hogs that will justify your presence. Write Wm. Smiley & Sons, Albany, Wis., for one of the catalogs and in so doing please mention The Wisconsin Farmer. Don't forget the date and place. "Bob" Smiley is one of the live wires back of the Poland Chinas in Wisconsin and he invites you to attend their sale. If you can't attend in person, send instructions to T. P. Shreve. See page 27.—Adv.

Farmers Advised to Buy Silos Now.

INDICATIONS point to the "early bird getting the worm" in the silo business this season. The scarcity and unprecedented high prices of materials is seriously hampering silo manufacturers, and will probably limit production so that many orders will be unfilled. In any case silo prices are due for a rise—manufacturers are being forced to that to avoid actual loss. There is no prospect for any immediate change in conditions controlling the market and deliveries of materials—situation is more likely to become worse than better. So well known a firm of silo makers as the Des Moines Silo & Mfg. Co., Des Moines, Iowa, are stating in their advertisement that they have on hand material for only a limited number of the popular Des Moines silos and that they are unable to offer any assurance of ability to fill orders after material now on hand has been made up. They will fill orders as received while material lasts, and farmers desiring a Des Moines silo are urged to put in their orders at once. Ordering now has two advantages—it enables the buyer to be sure of getting a silo and also of getting it without having to pay the almost certain advance in price that is coming. With feed at the present prices, no farmer who raises stock can afford to be without a silo and ordering now will prove a worth while economy.—Adv.

Last Call For Pagel's Duroc Sow Sale.

A MAN that buys good sows generally has that kind to sell and such will be the condition of things at Geo. W. Pagel's, Zumbrota, Minn., February 26th. If you have been following the sale reports you have noticed that Mr. Pagel has topped a few of the most prominent sales. He has been doing this for several years consequently his herd of breeding sows are good. He has two very choice sows of the noted Golden Model breeding. Daughters of these sows are in the sale bred to H. C. Wonder. A yearling granddaughter of Col. Gano is the right sort and her dam is by Golden Model 32[illegible]. Th cross has made good wherever used and being bred to a Crimson Wonder boar will give you a litter that will combine the noted blood lines of the breed. There will be about twenty-three gilts in the sale that will appeal to you and the yearlings and tried sows are good in every respect. This is Mr. Pagel's first sale and he does not expect the high average that some of the older breeders get, yet he has a sale offering equal to many. If you are wise you'll buy at this sale and save money. Don't worry about them not being good enough. We said at the beginning of the sale season that the best sales to be held in Minnesota would be advertised in The Wisconsin Farmer. This is one of the offerings. Get a catalog, look it over carefully and attend if possible. If you can't get away send your buying instructions to T. P. Shreve in care of Geo. W. Pagel. Remember the date and place. See page 38.—Adv.

Better Farm Implements.

THE above is the title of a beautifully illustrated book published by Deere & Company, of Moline, Ill. It is comprised of 156 pages and the whole volume is devoted to the description and care of the various classes of farm implements. Special attention is given in this volume to the operation and adjustment of farm tools. It must be admitted that profitable crop production depends very largely upon the thoroughness with which the soil is tended, and upon the skill used in handling the crop after it is produced. There is a knack in handling plows, harrows, cultivators mowers, corn planters, binders, drills, and, indeed, an innumerable class of implements, all of which are described and illustrated in this book. Haying and harvesting tools of every description are included, as well as stationary and portable elevators. It goes without saying that those of our readers who are now using John Deere machinery will be anxious to obtain this book, and we are equally sure that those who have never had experience with John Deere implements will be greatly interested in a perusal of this volume. It will be sent free upon application to Deere & Company, Moline, Ill.—Adv.

Crandell's Noted Chester Herd.

WISCONSIN Chester White breeders that are in need of some new blood to supply their old customers should write to Harry T. Crandell, Cass City, Mich., for his illustrated catalog and price list. Mr. Crandell has one of the best and largest herds in the North, headed by four of the greatest show and breeding boars to be found in one herd. Schoolmaster, the $800 sire is a boar of great scale and has proven his worth as a sire. Crandell's Wonder was the first-prize senior yearling boar at the International, Indiana, Wisconsin and Illinois State Fairs, and grand champion at the Ohio State Fair. Gilts are being offered sired by and bred to this good boar. Others are by Abo 2d and Callaway Ed. If you don't want to buy bred gilts Mr. Crandell can supply your wants in fall pigs, either sex. Write your wants and in so doing please mention The Wisconsin Farmer. See page 38.—Adv.

I. E. Stickelman, Auctioneer.

I. E. STICKELMAN, Clarinda, Iowa, has the distinction of being the first auctioneer that sold registered swine at an average of $100 or over, in the state of Wisconsin. He officiated at the L. F. Atwater sale at Bangor, January 31st, where he obtained $101.60 average for 47 head of Duroc Jersey bred sows. Colonel Stickelman is a good talker and knows the hog business from start to finish, for he maintained one of the good herds in Iowa until his auction work grew to such an extent that it was necessary to close out his hogs. Some auctioneers tire their audience with long-drawn-out talks that do not appeal to a crowd sitting in a cold building. When Mr. Stickelman makes a statement it has weight. When selling a sale he gets the confidence of the men in attendance, which is a material help to the success of a sale. We have known Mr Stickelman for several years, have worked with him on many sales in Iowa and the West, and we do not hesitate to recommend him to swine breeders that contemplate making public sales. If you expect to make a sale next winter, now is the time to set your date and engage your auctioneer. By attending to this early you can command a better date than if you wait until later in the season when the desirable dates have been given to other breeders. Write I. E. Stickelman, Clarinda, Iowa. See page 38.—Adv.

Buy Duroc Bred Sows.

THOSE that read the report of the L. F. Atwater Duroc sow sale noticed that Riley Martiny & Son, of Baraboo, Wis., bid on and bought the best stuff in the sale. In reading sale reports you can get valuable information if you will notice what breeders buy the good ones. When you hear of a breeder topping a sale or buying the best you can rest assured that he has a good herd at home. The man that buys the cheap ones generally has that caliber to offer his patrons. We realize that all breeders can't buy the tops, there wouldn't be enough to go around, but it's a great deal better to buy one good one than three or four inferior sows. We predict that Riley Martiny & Son will have one of the good herds of Duroc Jerseys in the state. They have now a good herd of brood sows and are adding good ones to their herd from time to time. At the present time they are offering some very choice fall sows and spring gilts, bred to farrow in March and April and bred to two excellent, big, well-bred boars. We have predicted 12-cent pork for some time, at this writing—February 5th—hogs sold on the Chicago market for $12.40, what will they be worth next summer? Now is the time to buy a good brood sow or two, and the above breeders have them for sale. Write them at once and in so doing please mention The Wisconsin Farmer. See page 38.—Adv.

$50,000 For Short-horn Prizes.

THE American Short-horn Breeders' Association appeals in a substantial way to Short-horn breeders everywhere to participate in the prize contests at fairs and shows throughout the country. It is a large amount of money that has been set apart by the Association for prizes and it is so widely distributed and applied to so many classes that Short-horn breeders everywhere are encouraged to respond. Certainly no year in the history of the Short-horn breed witnessed such a broad expansion as the year just closed and all indications point to a still greater achievement in the matter of furthering the popularity of the Short-horn during the present year. The inclination in all sections to replenish the cattle stock and obtain a better class of seed for the purpose, insures a growing demand for a good while to come. Apparently the day of the cheap sire has bone by. See page 36.—Adv.

Offers Free Incubator.

IN ORDER to introduce their stock food to the farmers who have not tried it the Wilbur Stock Food Co., 195 Huron St., Milwaukee, Wis., are giving a guaranteed fifty-egg steel incubator with a two months' trial order of stock tonic. The Wilbur stock tonic has given excellent results as an appetizer and conditioner, fattening them and preparing them for higher prices on the market. The Wilbur Stock Food Co. is anxious that every reader of this paper should take advantage of their generous offer and send for the trial order of stock tonic and the steel incubator. Mention that you saw the advertisement in this paper.—Adv.

Fine Hybrid Plums.

HYBRID plums that are unusually hardy and produce paying crops the second season after planting have been produced by Professor Hansen, of the South Dakota Agricultural College and are sold by the Gurney Seed and

TOO LATE TO CLASSIFY.

A COMBINATION OF SIZE, IDEAL TYPE AND PERSISTENT PRODUCTION

A 31.02-POUND bull, that comes from a long line of cows of large size, ideal type, heavy-production ability, which are persistent. **Racine Johanna Plebe Mercedes 188460.** Born December 8, 1915. His dam, **Ella Mercedes of Elm Court, made 31.02 pounds of butter in seven days;** 130.47 pounds butter in 28 days (an average of 32.69 pounds butter per week for four weeks); 829.78 pounds butter in a year. She weighs over 1,600 pounds. **His sire's dam** made 27.70 pounds butter in seven days; 808.82 pounds butter in a year and weighs close to 1,600 pounds. His dam's dam, sisters and his parents' sisters are big cows of good type and heavy producers. Come to our farm and see them—and see the kind of cows his daughters will develop into. Am also offering a straight and well-grown yearling heifer out of Lady Johanna of Elm Court and sired by Count of the Pontiacs.

RUEBEN KLOFANDA **RACINE, WISCONSIN**

Holstein Bull Calves For Sale

BULLS and heifers advertised in the last issue have been sold. We are now offering for the first time some splendid bull calves up to seven months of age sired by our herd bull, that is a son of a 33-pound cow. These calves are nicely marked, well grown and good individuals. Let us send you pedigrees of them. Mention The Wisconsin Farmer when writing. Address

EDGEWOOD FARMS, INC. **PEWAUKEE, WISCONSIN**

100 Short-horns to Select From-100

BULLS AND FEMALES. One or a carload. Write now. **ROCK COUNTY SHORT-HORN BREEDERS' ASS'N., J. E. Kennedy, Sec'y - - - JANESVILLE, WISCONSIN**

Nursery Co., 140 Gurney Square, Yankton, S. D. These plums are delicious and are proving very popular. The Gurney Seed Company is making a special bargain offer of 10 varieties of hybrid plum trees, four to five feet high and includes with these a dwarf apple tree and 25 everbearing strawberry plants. Write the company for one of their fine new catalogs and ask them about this special offer. Tell them you read about it in The Wisconsin Farmer.—Adv.

Building Materials at Wholesale.

HOMEBUILDERS will find it well worth their time to read the advertisement on page 40 of the Gordon-Van Tine Co., 6179 Gordon St., Davenport, Iowa. It contains some valuable suggestions on house construction and tells how anything needed for building may be purchased at wholesale prices, thus making a great saving to the purchaser. The company has just issued a home plan book which will be sent free to readers of this paper. They have valuable books on barns, garages, lumber and roofing materials also. Persons interested can obtain these books by filling in the coupon attached to the advertisement and mailing it to the company.—Adv.

Make Money in Contract Ditching.

AN opportunity to make big money in underdraining land is open to men who own Buckeye traction ditchers. Every county has areas where underdrainage is necessary, and almost every farm has wet fields that would produce more when drained. If you want to make from $15 to $20 a day clear profit, consider an investment in a Buckeye ditcher. Full information is given in the free "Book of Facts," issued by The Buckeye Traction Ditcher Co., 1715 Crystal Ave., Findlay, Ohio. See the advertisement on page 24 and write for the book today, mentioning The Wisconsin Farmer.—Adv.

Profit in Silver Fox Raising.

RAISING silver foxes is profitable. This is the opinion of Fromm Bros., Hamburg, Wis., who recently sold three of them for $425, $350 and $300 respectively. They were raised on the Fromm Bros.' ranch and were purchased by Maas & Steffen Inc., 305 Main St., St. Louis. Maas & Steffen are dealers in furs of all kinds and trappers and fur growers should get their price lists. —Adv.

Farm Hauling Made Cheaper and Easier.

THE Smith Form-a-Truck, which combines with any Ford, Maxwell, Dodge, Buick or Overland car to make a one-ton truck, is gaining prominence rapidly in farm hauling. Hundreds of farmers are already using them and find tremendous saving in hauling costs. They displace horses, doing the horses' work in much less time, and are more economical to keep. They need fuel and care only when working. If you have not investigated this boon to farmers, do so at once. The new free booklet, "Deliver the Goods," will give the information you want. Send for it to the Smith Motor Truck Corporation, Suite 995, 1470 Michigan Ave., Chicago, Ill., mentioning The Wisconsin Farmer when writing them. See page 7.—Adv.

Achievements in Concrete Construction.

By Supplying Two Important Factors, Namely, Heat and Moisture, Building Operations May Be Carried on in Winter.

MORE working days on the farm is the announced result of late development in concrete construction. Methods have been found and proved whereby concreting may be done during cold weather by adhering closely to known requirements in mixing, placing and protecting concrete when temperatures are low.

This achievement in concrete construction opens the way to greater profits on the farm providing, as it does, for the profitable use of days that heretofore have been idle ones.

Concreting in wintertime "cuts both ways" for the farmer in giving him an opportunity to do work in winter that will save time and money in the summer by reason of the elimination of repair expense attained through concrete construction on foundations, fences, watering tanks, troughs, manure pits, cisterns, etc.

Where building material other than concrete has been used it is subject to decay and there is always repairing to be done. A definite program should be laid out at the beginning of cold weather for making such repairs. With the careful application of known requirements necessary to concreting in the wintertime, the farmer can make concrete fence posts, concrete block, concrete watering troughs and tanks and lay barn and other interior concrete floors. The making of concrete block during winter is a common practice. When spring opens and the farmer of necessity must give his time to crop planting, and if a supply of concrete blocks is on hand, he can employ a mason to lay the hog house, chicken house or barn foundation while he goes on with his farm work.

Cold, as is generally known, delays the hardening of concrete. The effect of cold weather in the manufacture of this artificial stone becomes noticeable when temperatures fall below 50 degrees Fahrenheit and becomes more apparent as the cold increases. On the other hand, heat hastens the hardening of concrete; therefore, the requirements necessary to successful concrete work in cold weather are warmth and moisture. Concreting in cold weather simply means the creation of these two conditions—warmth and moisture. That problem, as before stated, has been successfully solved, but in its solution it has been found that strict adherence must be given to all requirements necessary to good concreting, and that it must be remembered that sand and pebbles or broken stone used must be free from frost or lumps of frozen material; that if these materials contain frost or frozen lumps they must be thawed out before using. Mixing water should always be heated.

Although adding common salt to mixing water will prevent freezing of concrete that has not hardened, there is a limit to the quantity of salt which may be added if the final strength of the concrete is not to be affected. Salt simply lowers the freezing point of the mixing water; it does not supply what is most needed—heat and warmth. It delays, instead of hastens, the hardening of the concrete.

Sand and pebbles or broken stone and mixing water must be heated so that the concrete when placed shall have a temperature of from 75 to 80 degrees. Some sands are injured by too much heat. The same applies to certain varieties of pebbles and broken stone. A temperature not exceeding 150 degrees Fahrenheit will generally prove most satisfactory.

Concrete must be deposited immediately after mixing so that none of the heat will be lost before placing in the forms.

Metal forms and re-enforcing should be warmed before placing the concrete. Be careful to remove ice and snow and frozen concrete remaining on the forms from preceding work. Forms can be warmed by turning a jet of steam against them or by wetting with hot water.

Even though materials have been heated and the concrete placed immediately after mixing, it will lose much of its heat if not protected from low temperatures. Therefore, to protect the concrete immediately after placing, use canvas covering, sheating, housing in the work, or hay or straw. In addition to these means small oil or coke-burning stoves or salamanders may be used in enclosed structures.

Temperature which may not be low enough to freeze the concrete may, nevertheless, delay its hardening for a considerable time. Do not expect concrete placed when the temperature is low and remains low for some time afterward, to be safe for use as soon as though placed during warmer weather. If concreting is unavoidably delayed or interrupted the work should be covered until concreting is again begun. Cover and protect any sections of the work as soon as completed. In severe cold weather continue this protection for at least five days. Forms must not be removed from the concrete work too early. This applies to any concrete work, regardless of season, but is particularly important with work done during cold weather.

Remember that frozen concrete sometimes very closely resembles concrete that has thoroughly hardened. When frozen concrete is struck with a hammer it will often ring like properly hardened concrete. Before removing forms examine the work carefully to see whether it has hardened or is simply frozen. To determine this, remove one board from some section of a form, pour hot water on the concrete or turn the flame of a plumber's blow torch or a jet of steam under pressure against the concrete. If frozen the heat will soften the concrete by thawing the water contained in it.

Feather Pulling.

Feather pulling or eating may not be so bad as egg eating, but it is annoying and is a habit with which most poultry keepers have more or less trouble. During the fall and winter, when birds are not getting sufficient exercise and are crowded into small houses, this habit is most likely to develop.

Such habits as egg and feather eating are usually the fault of the owner. When birds are not overcrowded in large flocks, and are forced to work all day for all the feed they get, it is seldom that either habit appears. As a rule, a feather-eating bird is a poor layer, and the quicker you can rid your flock of such a pest the better. One feather eater in a flock will cause no end of trouble, and in a few weeks will make all the birds show unsightly bare backs.

To stamp out the habit, get rid of the hen that is causing the trouble, supply the flock with plenty of animal matter, such as meat and green cut bone, make the birds exercise after all the food they get.

As a treatment, apply an oitment of some bitter mixture—quinine or aloes mixed with lard will do the work. A solution made by boiling tobacco in water will be found satisfactory. The feather-eating bird will quit after one or two of these bitter doses. Of course, such treatment is for birds that are valuable for breeding purposes. I should advise you to dispose of all ordinary birds that develop the habit.

SMILEY & SONS' ANNUAL

POLAND CHINA BRED SOW SALE

AT THE FARM NEAR

Albany, Wis., Thurs., Feb. 22

50 HEAD--5 Tried Sows, 5 Fall Yearlings, 40 Gilts

Sired by Major Hadley, Major Miller, Monarch (some boar), **Big Bone Jumbo, Goldengate King** and others of note.

Bred to Monarch, Major Miller, Smiley's King, Wisconsin Jumbo 2d.

We have never made exorbitant averages but the sows that we have sold have made good for the buyers and we have satisfied customers. We sell in ordinary flesh and they farrow and raise large litters—don't think the offering is poor, for they are in proper breeding condition. **Sired by and bred to excellent boars.** Blood that old customers can use.

NOTICE: Catalogs sent only on request to those that write for same—do this at once and mention The Wisconsin Farmer. Auctioneer, W. B. Duncan. Send mail bids to T. P. Shreve, field man for The Wisconsin Farmer.

Wm. Smiley & Sons, Albany, Wis.

JERSEY CATTLE.

RED OAK STOCK FARM

F. R. CONSTANCE & SONS, Props.

HAVE one yearling Jersey bull and three yearling bull calves for sale. All out of splendid dams and sired by a bull whose dam made 526 lbs. butter on official test under just ordinary farm conditions. We also have a fine fall Duroc boars and gilts for sale. For Dec., 19 cows and heifers of all ages and periods of lactation gave us 618.2 lbs. fat for which we received 44½c per lb. or $275.10. This was at the creamery and this under just ordinary farm conditions.

WAUPACA **WISCONSIN**

Fewacres Farm's Jerseys

ARE heavy producers. Irene's Cherry 285828, a senior two year old, just completed a world's record of 12,571.6 pounds milk and 753.629 pounds butter fat. Write us about our young bulls for sale. Pedigrees and further description on request.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS **LAWLER, CHICKASAW CO., IOWA**

We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

VOL. XLVI. NO. 8. THURSDAY, FEBRUARY 22 1917. WHOLE NO. 1830

Out of the Old Barn---Into the New.

SELDOM have we been able to get hold of a barn picture which illustrates so forcibly as does the view shown herewith, the difference between modern barn construction and that of an earlier day. This picture was taken on the P. F. Coggins farm near Blooming Prairie, Minn. The new barn shown is just ready for occupancy.

Attention of our readers is called to the old barn, which appears in the foreground of one of the illustrations shown herewith. This barn was built many years ago—so many that we found it impossible to find anyone who could give the exact date. It is interesting to note some of the things that our ancestors had not yet learned regarding barn construction. In the first place, we call attention to the windows in the old barn. They are few and far between and the old-timer who erected this structure certainly had little knowledge of the value of light. Just imagine how many dark corners there must be in this old barn, and we all know that it is in the dark corners that the disease germs find the base for operations. Our readers will not fail to notice the character of the foundation in the old barn. This barn was built long before people realized the value of cement in barn construction. Hence the old-fashioned rough stone foundation. It will be noted that many of the stones have fallen out. While stones make a good foundation material for barns, they must be held solidly together by the use of good cement. By far the better way is to build them up as they are shown in the new barn. The old barn has the old plank flooring, except in corners where there is no flooring at all. The only windows for light and air in the old barn are those shown on the top of each end gable. The old barn structure was built without much thought for ventilation, although the cupola idea was installed. There was no system as to how much fresh air was needed to keep the atmosphere inside pure and clean. We doubt if the original builder of this barn had any idea how much heat a cow or a horse throws off inside of a barn or how often the air in the barn should be changed in order to preserve the health and strength of the animals inside. These matters have been taken into consideration very carefully in the construction of the new barn. This new structure has a modern ventilating system constructed along scientific lines and guaranteed to keep up a constant circulation of fresh air inside the building even when the structure is filled to capacity with cattle or horses. The square openings, eight in number on one side, and shown near the base of the new barn, are intakes for fresh air. The number and size of these have been figured out on a scientific basis and this same statement applies to the number and size of four air flues which carry the impure air out of the building as the fresh air intakes bring in the fresh air. Most of the fresh air in the old structure came through broken windows, open doors or holes in the side walls or foundation. In the new structure doors and windows are kept closed and the system of ventilation has been so figured out that just enough pure, fresh air will be brought in from the outside, and the foul air inside will be removed just fast enough. The King aerators, three in number, are a great ornament to the new barn, but that is not their main purpose. They form a part of the ventilating system, assisting in the removal of the foul air and in keeping up a good circulation of air in the building. When this barn was built the owner decided to get expert advice on the ventilating system and not trust this important work to men who had never had any experience along that line. In this decision he was wise.

THIS IS THE NEW BARN—WELL-LIGHTED AND VENTILATED AND ALL MODERN CONVENIENCES.

The fact is that the owner of this barn has made progress along the line of all of his work on the place. He has a better grade of live stock than he had when he built the old barn. His live stock is worth more money and hence he can well afford to take better care of it. He has made something of a study of the feeding of live stock and on this account he has two splendid new silos attached to his new barn. It will also be interesting to our readers to know that the old barn shown in this picture when it was erected was considered a modern type and looked upon as one of the best barns in the

(Concluded on page 15)

PROGRESS IN BARN CONSTRUCTION IN A QUARTER OF A CENTURY.

CURRENT EVENTS

ACTUAL hostilities between the United States and Germany had not broken out up to the first of the week, although the situation was hourly becoming more critical. The steady accumulation of violations of American rights by Germany made it possible that President Wilson would go before congress to ask authority for further protecting lives and property, without waiting for a serious disaster which might shock the country. The president has no wish or intention to rush this country into war, but he has made up his mind that international law and the rights of neutrals on the high seas must be protected. Daily there come reports of Americans being subjected to great danger, because of the submarine activity in European waters. Americans are serving as sailors, hostlers and otherwise on vessels which are being sunk and one American vessel was destroyed by an Austrian submarine last week, although it was clearly identified as a neutral ship. While only approximately 10 per cent of American commerce with Europe is carried on American ships, the sailings of vessels of other nationalities in many instances have either been cancelled or postponed, and, therefore, the result of the ruthless submarine campaign in time will result in far-reaching disturbance of the industrial life of the United States. Preparations by the government for any eventuality still are going forward without interruption. Much importance is attached to the work of the council of national defense, which is holding daily sessions to learn at first hand from Americans of experience what provisions must be made to co-ordinate American resources. The situation may change almost any minute, everything depending on the length to which Germany will go in her attempt to effectually blockade the British isles and shut off their food and munitions supplies.

ARMED Mexicans, believed to have been Villa bandits, crossed the international boundary line again last week and took prisoner three Mormons, a number of Mexican ranch hands and live stock. Up to the first of this week the band had not been apprehended, although it was reported that airmen belonging to the United States army were in pursuit. The United States troops are being withdrawn from Mexico, where they have been on the trail of Villa for several months past, and the state troops are being sent home from the border, the situation having been less critical for the last two or three months. With characteristic cunning, Villa seems to have timed his new raid for the best possible moment. So far as has been learned no one was killed in the raid, the bandits contenting themselves with taking prisoners. More trouble along the border is inevitable, unless Carranza succeeds in getting a tighter rein on the situation.

THE United States has flatly rejected Germany's offer to discuss differences between the two nations while the ruthless submarine campaign is in progress. In a note to the Swiss minister, who presented the German proposal, Secretary Lansing said the United States does not feel it can enter into any discussion with the German government concerning the policy of submarine warfare against neutrals which it is now pursuing unless the German government renews its assurance of May 4th (the Sussex note) and acts upon the assurances. In view of the fact that the United States has taken the most vigorous course possible short of war to denounce the ruthless submarine warfare, officials regard the German proposal to negotiate while the campaign is in progress as utterly insincere. From the first the move has been looked upon and resented as a piece of propaganda designed to befog the issue and put the United States into a false position of belligerency.

APPROVAL for a $400,000 appropriation will be asked of President Wilson by the federal trade commission and the department of agriculture for the food price investigation they are about to start at his direction. The inquiry will be begun as soon as the money is available and a plan of organization is worked out. It will go deeply into charges of price manipulation and restraint of trade in violation of the antitrust laws. At least six months will be required, it was said, before any sort of a report can be made and a year is the estimate of the period necessary for a complete inquiry into the underlying causes of advancing food costs. Already the department of agriculture has gathered a mass of detail concerning production, distribution and consumption of foodstuffs. Here its powers have ended and the trade commission, possessing inquisitorial functions, will take up the burden of the work. The trade commission's aim will be to cover every side of the food situation. Its observations will include the work of the farmer, the packer, the commission dealer, the wholesaler and the retailer. Experts will go into every detail of food production, distribution and consumption.

THE American commission for relief in Belgium has officially notified the German authorities that the Americans will withdraw from participation in the relief work in Belgium and northern France. This step was taken in reply to an order from the German authorities that Americans must withdraw from the provinces of Belgium and northern France, leaving only a few of their representatives, headed by Brand Whitlock, American minister to Belgium, in Brussels. The commission instructed Director W. C. Gregory to inform the German authorities that as the Americans could no longer carry out their responsibilities and undertakings to other interested governments and fulfill their duties toward the peoples of Belgium and northern France, the Americans would officially withdraw from the relief work.

A TREASURY deficit of $333,400,000 at the end of the next fiscal year is forecast in a report submitted by the senate finance committee of congress, recommending that the administration revenue bill be amended to authorize a bond issue of $195,256,000 instead of $100,000,000, and that the authorization for certificates of indebtedness be made $500,000,000 instead of $300,000,000. The recommendation for increase is based on revised trade estimates submitted to congress since the bill passed the house, placing the federal government's expenditures for the fiscal year, 1918, at $1,400,000,000. The committee estimates that to meet this total and provide a working balance, the amount which must be raised by bonds and new revenue legislation is $434,400,000.

THE largest naval appropriation bill in the country's history was passed last week by the lower house of congress and sent to the senate, where a subcommittee immediately was appointed to hasten its consideration. It carries more than $368,000,000, provides for the second installment of the great three-year building program adopted last year, and includes administration amendments authorizing the government to commandeer private ship yards and munitions plants in time of national peril and to purchase the basic patents of aircraft. The vote on the bill was 353 to twenty-three, eighteen democrats, headed by Majority Leader Kitchin, four republicans and one socialist voting against it.

Jacket the School Stove.

A campaign to improve the facilities for heating, ventilating, lighting and sanitation in rural schools is being made by the United States Department of Education and the various state universities. In speeches, letters and bulletins the agents of the government are waging ceaseless war against the conditions which breed disease and dwarf the minds of children, says the Kansas City Star.

Dr. M. P. Ravenel, of the University of Missouri, said recently: "The difficulty is not so much to furnish enough heat as to furnish with warmth an adequate supply of fresh air.

"Children are cooped up within fairly tight rooms for five or six hours a day at a period when they are growing and need every advantage for the development of their minds and bodies. One great and common fault in schools is the uneven distribution of heat. The children near the red hot stove are too hot, while those a little farther away are too cold.

"With heat it is necessary to furnish an abundant supply of fresh air, since, in breathing, the air becomes rapidly poisoned with our own excretions, and loses its life-giving properties. The advantages of fresh air are readily seen in the so-called open-air schools, which were devised and put into operation for children suffering from tuberculosis.

"The average country school is necessarily heated by stoves. The red hot stove which burns coal gives off injurious gases to the room. In such a stove there is little or no provision for carrying out the used and foul air. This can be corrected by any competent sheet iron worker by covering the stove with what we call a 'jacket,' which is a shield of metal set around the stove. Within the jacket there should be a hole in the floor connecting with a flue on the side of the house through which fresh air is constantly admitted.

"It is necessary, also, to furnish an abundance of moisture. The more we heat air the greater its capacity for moisture, and although the outside air may be moist enough to be comfortable, when we heat it by means of our stoves it becomes too dry for comfort. This is hard to remedy, but can be helped by having a broad pan of water on the stove constantly evaporating and giving moisture to the room.

"Care should be taken not to overheat the schoolroom. If some children are cold, it is better for them to wear their wraps than to overheat all the rest in the schoolroom."

Lightens Kitchen Work.

IT IS difficult to imagine how much the kitchen work may be lightened until you have tried a Hoosier cabinet. It is so compactly and conveniently arranged that the housewife may sit down restfully at her work and find all necessary tools and equipment within easy reach. It has places for 400 articles within arms reach, and contains 40 labor-saving devices. Think what that means to the farm wife. It is a better aid than a servant, and its neat, attractive appearance is a constant source of delight. Send to the manufacturers, the Hoosier Mfg. Company, 124 Van Buren St., New Castle, Ind., for a copy of their latest book, "Hoosier Kitchen Cabinets," and particulars of their generous freight-paid, money-back offer. Tell them you read about Hoosier cabinets in this paper.—Adv.

Superior ALFALFA CULTIVATOR

Cultivates Alfalfa Right.

No injury to roots and crowns. Cultivator teeth work up to the roots and crowns and then side-step, or work around them.

The Cultivator teeth take out the weeds and grass and completely work up the soil.

When you injure an Alfalfa root or crown, decay sets in, the plant becomes sickly and finally dies. With the Superior Alfalfa Cultivator, the operator sits well behind his work and can see exactly what is being done. Levers within easy reach. More or less pressure can be applied to suit conditions. Should the cultivator "load-up" with trash, operator can immediately free the machine.

The Superior is the most successful Alfalfa Cultivator on the market, because it does its work right without injury to the plants.

Your implement dealer can supply you with a Superior Alfalfa Cultivator. Write us for Descriptive Folder.

The American Seeding-Machine Co., Inc.
Springfield, Ohio

The Farmer's Concrete Mixer
SHELDON Batch Mixer Price $11.50 Up

The Sheldon was designed especially for the farm. Highly praised by users. Farmers everywhere call it the ideal mixer. Used today all over the United States. A big success. Small enough to be easily moved—big enough to keep 6 men busy. Low in price. Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer.

Read What These Sheldon Owners Say

I and my hired man laid a feeding floor for my hogs, 24x24, in one day; also put floor in my cow barn. My neighbor liked it so well I am not able to keep it at home.—ANDREW CHRISTENSEN, Hancock, Minn., Rt. 1.

We have used the mixer during past year for putting in cement foundations for a complete set of farm buildings, including silo, and like it very much.—DANA WRIGHT, Jamestown, N. D.

Last year I bought a cement mixer from you with which I am well satisfied. It did not take long for it to pay for itself and I surely can recommend it to anyone needing a *big mixer at a small price*.—WM. PARKS, Martinton, Ill.

I am more than busy with my Sheldon Concrete Mixer. Have more work than I can do. *I get $10 a day when I work out*.—JESSE L. WITTER, Wellsville, N. Y.

The machine works fine. Have already *got the job* of mixing concrete for the bridges in this township.—JOHN ROSE, Spartansburg, Pennsylvania.

Last spring we purchased of you a set of castings to make a concrete mixer. It was constructed per the plans furnished and it *surely worked great*.—D. M. BAUBAKER, Freeport, Ill.

FREE PLANS

Make your own concrete mixer. You can do it at a cost so low you can not afford to mix concrete by the shovel method. Along with our iron parts we send Free Plans and permit for making your own machine. A good way to get a practical mixer at a small expense. Or, we will sell you the complete machine, ready built.

Make Big Money at Concreting

If you buy a Sheldon Mixer for your own use, you can make many times its cost in a season by renting it to your neighbors. Or, if you want to go out with the mixer on contracts, you can easily earn $8 to $20 a day. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time.

Write For Our New FREE Catalog

Shows our full line of mixers which are sold direct to you on strong guarantee. *Thirty days trial* privilege. No other like it. Patented. Two styles, hand and power. Mixes 2 1-2 cubic feet a minute. One man can operate it, but it will keep 2, 3, 4, 5 or 6 men busy. Continuous chain drive. Tilting dump. Easily and quickly moved. All parts guaranteed. Does work equal to $400 mixers. Be sure to get the catalog. Write today.

My New Special Offer

I want to tell you about my co-operative plan by which you can get my time-tried, thoroughly proven Sheldon Batch Concrete Mixer at little or no cost to you. I want ten men in every county to accept my special co-operative offer right now. Are you going to be one of the ten? Write and say: "Send me special offer."

The Sheldon will pay for itself on first small job. Takes the backache out of concrete. Makes possible those many small improvements that add so much to the value of your land.

SHELDON MANUFACTURING COMPANY, Box 4723 Nebraska, Neb.

KEROSENE cuts your cost over 50%

By burning Kerosene you save over half—It's the Modern way. This machine is just what you want.

The Peoria Tractor

has the power—it gives the service—and at the low cost of $725.00 it cannot be surpassed.

Write for our liberal proposition.

The Wisconsin Farmer

THURSDAY, FEBRUARY 22, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

FEBRUARY AND AUGUST IN WISCONSIN.

OF ALL the months of the year in this ideal Wisconsin climate, the two most trying—if, indeed, I may refer to our climate at all as trying—are February and August. When winter starts early and hangs on late, as it has in Wisconsin this year, it is in February that we begin to weary of the long cold spell and hope for the first touch of spring. Not for years have we had so much snow in portions of Wisconsin, and the final days of February this year find us, at least in many parts of the state, with the great snowbanks still piled high. Our country roads have been blockaded, and it has been a great season for the old-fashioned sled; and let me say right here that I have never found a more enjoyable mode of travel (provided the distance is not too far, of course,) than the old farm sled, or the cutter, with a spanking good team plunging along through the drifts of snow.

For a few weeks we stand up nobly and console ourselves that severe winters bring us a crop of ice; that the blanket of snow is a warm covering for the winter wheat; that science has told us that the rigors of winter produce a favorable chemical action on the soil, and that cold kills germs and promotes better health for man and beast. But I have seen many hard winters, and I know that in a state like Wisconsin the winter hangs on heavily, and before February is over we are praying for spring and warm rains and sunshine. And yet how easily we chafe under the reverse conditions. July may be hot, but we smile and say it is great for haying and for the growing corn. How many of us can get "knee deep into August" and feel the blistering heat of dog days without looking forward with pleasurable anticipation to the frost?

My friends, the months of February and August are to me the test months of the year, and they teach us a lesson of the quality of endurance necessary to lead a successful life. In my own life I have encountered Februarys and Augusts when cares and burdens have hung on almost to the breaking point. I have learned, through the successive years, that February is followed soon by the balmy days of spring, and that out from under its burdens of snow and ice the world blooms again each year more beautiful and more productive than ever. When I swelter through August, working as do my farmer friends, until the sweat rolls off my brow, I am encouraged by the thoughts of autumn, the wonderful rest time and harvest time that amply repays for all the heat and toil.

I have read that nature compensates, and I know that for all toil and suffering there is a sure reward and consolation. Life's Februarys and Augusts are the darkest hours before a glorious dawn. The good book promises that, "if we suffer, we shall also reign." Some of my readers have come to that age when even life is dragging along slowly toward what we know must be the end. Take heart if cares are heavy. February and August never have dragged out longer than we have been able to bear. It is my gospel that we should take our doses of cold and heat philosophically. February may be made pleasant and profitable for each and every one of my Wisconsin Farmer readers by proper planning for spring work on the farm. Even in August we may take comfort in the works we have wrought, and the harvest ahead for ourselves and our fellows. Bear up bravely, even through trials that seem to never end. "Every cloud has its silver lining." If in Wisconsin we are on the lookout for the first robin, we may forget about the final assault of winter in February. Keep an eye open in August for the red ears in the corn, and forget how many times it has been 100 degrees in the shade.

FARM-LOAN BANKS READY SOON.

I AM advised by a member of the Federal Farm Loan Board that the twelve land banks (the one for Wisconsin and adjoining states will be located at St. Paul) will be organized by the first of March. My informant adds, officially:

Shortly thereafter, these banks will be ready to issue charters to applying farm-loan associations and then proceed with the business of lending money on first mortgages secured by farm land.

This should make it possible for Wisconsin farmers, who have done the preliminary work of organizing associations and securing their necessary legal articles, to borrow money on their farm land by the time cropping operations open in earnest in the spring. I regret that there should have been a little delay, for I have been confidently expecting the banks to be open and ready for business by this time, but it is hard and slow work inaugurating a new system as extensive and as far-reaching as this one, by which farmer borrowers are to be enabled to borrow money at a low rate of interest and for a long period of years. As to the rate of interest, that is not yet decided. I still believe that it will be about 5½ per cent, to start with, and possibly as low as 5 per cent later on. Understand, there is no commission in addition to this and but little expense for abstract and other legal papers, if the borrowers, who form the necessary loan association, will co-operate and have one abstracter and lawyer draw up the papers for all.

The new banks will open with $9,000,000 capital, which means $750,000 each for the twelve. This seems small when we stop to consider that already the farms of Wisconsin are mortgaged for $146,815,313 (the last available census figures), but we must bear in mind that the bank's working capital will be constantly replenished. Every farmer-borrower will subscribe for 5 per cent of his loan and bonds will be issued, over and over again, as soon as the capital bids fair to be exhausted, so that the loaning fund will be practically inexhaustible. The bonds will be good investments, too, so I look for no difficulty along this line of having sufficient money to meet the needs of every farmer in Wisconsin and this part of the country who wishes to take advantage of the new law.

WISCONSIN'S DAIRY SUPREMACY.

A FEW weeks ago one of the leading dairymen of the Southwest came to Wisconsin to investigate conditions here. He was amazed at what he found and returned home, singing the praises of Wisconsin loudly and often. He is as enthusiastic a booster for this wonderful state of ours, its achievements and its possibilities, as ever came into our midst, and went away to spread the glad tidings of our permanent prosperity.

Because I believe it is a good thing, every little while, to see ourselves as others see us and to reflect on the success which we are achieving, I am going to reprint a portion of this man's enthusiastic praise, as I find it set forth in the paper printed in his home town, in the Southwest. Here is what he has to say of our leadership:

I was pleased and amazed at the wealth of the dairy regions in Wisconsin. More cheese is manufactured in Wisconsin than in all the other states in the Union. Twenty-five per cent of the butter is manufactured there. Chicago obtains a large part of its milk supply from Wisconsin and its condensed milk is sold around the world.

At Marshfield, Wis., a little city of only six thousand inhabitants, there was marketed four million dollars' worth of cheese alone last year. Wisconsin sells 189 million dollars' worth of what is known as American cheese annually. Add to that the butter, condensed milk and the fresh milk supplied to Chicago and other cities and you gain some idea of the profits that pour into the pockets of the Wisconsin farmers every year.

Wisconsin produces 37 per cent of the green peas consumed in the United States. The peas are taken from the vines, canned and sold, while the vines and hulls are put into silos to feed the dairy cattle. Some of those fellows up there would grow wealthy on what is wasted on the average Missouri or Kansas farm. They grow the finest timothy and clover in the world, and they are learning that they can grow alfalfa successfully. They also have developed an early corn that they can grow there for grain and silage.

This man found our fair state to be a land literally flowing with milk and money. He is going to do either one of two things: Practice Wisconsin methods in the place where he lives, or move here among us and join the prosperous procession. In either event, he will be doing a good work. While we want Wisconsin to hold its agricultural and dairying pre-eminence, we are also interested in the welfare of our brothers, and anything which we can show them, which will benefit their lot, will be shown gladly. On the other hand, we want and need open-minded men here in Wisconsin, to keep alive the enthusiasm which we have put into our farming work and which is such a big factor in our success.

I have yet to hear of any man who investigated dairying in Wisconsin and was not enthusiastic to the point of exuberance. I hope we can, and will, maintain the leadership we have won so notably. At the same time, we must welcome the stranger and point out to him the way to success, the way which leads through the feed lot and the dairy. In this way we shall serve doubly, producing abundantly ourselves and teaching others how to go and do likewise.

A STORY OF UPPER WISCONSIN SUCCESS.

A COUPLE of weeks ago I printed, in the editorial columns of The Wisconsin Farmer, a letter from Mr. J. J. Heffron, of Stevens Point, setting forth the splendid success achieved by a farmer in his section of our state, who, in twelve years, had seen his capital of $700 increase to well-nigh $20,000. Since printing the letter I have read it over several times, for it interests me in many ways. First, it is a story of signal success here in Wisconsin, where I believe better opportunities exist today than anywhere else in all the country; second, it is reminiscent of my own early struggles in a land in many respects like that of which Mr. Heffron writes. I hope you will pardon me if I print his letter again and use it as a little text for some personal remarks. Mr. Heffron writes:

About twelve years ago, I traded Walter Andreweski a forty-acre farm with a new five-room house and barn 24x30 and gave him some tools and machinery, one cow, one horse and a few chickens. I took a mortgage on the forty acres for $265 for five years at 6 per cent. The forty acres was all wild land at that time. Mr. Andreweski gave me a house in Chicago with a mortgage of $800 and I later sold this place for $1,500, so you see he was worth at that time about $700.

Since he has come on to the forty acres he has bought over 300 additional acres of adjoining land. A short time ago he called on me and I asked him how many cattle he had and he told me that he had sold several, but that he expected to winter fifty-one head and in addition twelve horses. A few years ago he sold over $2,000 worth of potatoes from one crop. I asked him what he considered his place worth and he remarked, "Twenty thousand dollars wouldn't move me now." He said also that he owed a few hundred yet, but that his milk checks and another year's crop would square him with the world. I could name almost 100 similar cases which I have located in the last twenty-five years. I cite this only as an example of what can be done by hard work in upper Wisconsin.

Here is a story of success which makes my heart thrill with pride for the man who achieved so much, and for the Badger state, in which such things are possible. To come to wild land, to grub a foothold in the virgin soil, to bring dormant acres into crop-bearing, and to see one's handiwork blessed and made bounteously profitable beyond the fondest dreams, until the original capital is multiplied thirtyfold—all this in only twelve years! Is not this a story of success so full of inspiration to us all as to deserve not merely one printing, but many printings, so that all may know of it? I honor Mr. Andreweski, and some day I am going up to Stevens Point and have the pleasure of meeting him, face to face, and telling him so.

Mr. Heffron's letter has caused the years to roll away and my own youth to stand forth, clear in my mind's eye, as nothing else has revealed it to me in a long time. When I was a lad I worked amid conditions greatly akin to those Mr. Andreweski struggled with in the early days of his settlement here in Wisconsin. He came to wild land and grubbed a foothold amid the stumps. Let me tell him that the very first money I ever earned in my life was earned by grubbing with a mattock between the roots of black walnut stumps on my father's farm in Wyandot county, Ohio, so that wheat might be sowed in these precious spots and the family's food supply increased for the coming year. This county, where I lived and worked as a boy, was named for the Wyandot Indians, who had come, by various migratory stages, from Canada, down through Michigan to Ohio, where the government had established a reservation for them, so that I knew what it was to have Indian neighbors, just as the settlers of certain parts of Upper Wisconsin know what it is today. I believe Mr. Andreweski and I would find much in common to talk about, if we were to meet. I have done my full day's work, in wild land, many and many a time, long years ago. It takes a story such as this man's to bring it all back to me, most vividly.

I hope to print many more stories like this in The Wisconsin Farmer, as the weeks pass. I like them immensely; they are so inspirational and encouraging. I wish my readers would write to me in such a vein, telling how they have worked and won their way in the world. We can be of inestimable value and cheer to one another if we will talk frankly and freely together, telling the story of our trials and our triumphs, our sorrows and our successes. Shall we do this, every little while, here in this "family circle," where all have an equal voice and where each is gladly heard?

The Wisconsin Farmer Madison, Wis.

Plans For Wisconsin Farm Homes.

Attention is paid in this issue of The Wisconsin Farmer to the farm home and several plans approved by Wisconsin women are reproduced on page 10. In addition our readers will find illustrations of a number of modern farmhouses taken especially for their guidance and illustrating some of the modern methods of construction.

The Wisconsin Farmer recommends better farm homes as a good investment. By this we do not mean that immediately upon receipt of this issue every reader should forget everything else and start out to plan a farm mansion. That would be just as foolish as it would be for the average dairyman to undertake to equip his farm with the same sort of buildings as may be found on the farms owned by millionaires and run for pleasure and personal satisfaction without regard to profit. It is just as necessary to use sense in planning and building a farmhouse as it is in planning and erecting a dairy barn or a granary or a horse barn or any other building which is a part of the invested capital on the farm. We do not recommend that a farmer spend more on his farm home than his business and the state of his finances will justify.

But it is right to call attention to the fact that many have not given the farm home the consideration which its importance in the farm economy deserves. There are many farmers who have lifted the mortgage and stocked up their place and erected big barns and put in many other improvements, who have paid very little attention to the farmhouse which houses the most important partners in the general scheme of running a farm. At the institutes we have so often heard the remark from a pioneer farmer who has made a big success: "I owe most of my success to my wife." Now if we really mean that remark why not pay a little more attention to the place in which the wife has to live, the building in which she carries on that part of her work which is so essential to the success of the farm.

There are thousands of farms in Wisconsin which ought to have better home buildings. Some of them should have new homes. In some cases the old house should be built over, modernized, equipped so that the wife and daughters will find their work easier and more comfortable.

We do not by any manner of means maintain that a house should be built solely to please the wife, though we believe that her views and her ideas should have the most weight when it comes to making decisions as to the kind of a house, the size, the equipment, conveniences, etc. The man who works all day in the fields or with his live stock needs a good home in which he may enjoy the hours indoors and in which he may get the largest possible returns out of his rest periods. To this end the farm home should be planned so that the farmer has his office or den and so that the boys and the hired men are taken care of properly.

There are several main objects to be taken into consideration in building a farm home. A matter of importance is location. A place high and dry should be selected and exposure should be to the east or south if possible. Have plenty of windows for light and ventilation. Plan the house so as to save as many steps as possible. No one would think of putting the dining room in one corner and the kitchen far removed in another corner. Neither would we think of having the men folks come directly into the sitting room from their work in the fields. No one wants a house so arranged that all the family and guests have to go through one of the bedrooms to get to the common bathroom. These are commonplace illustrations which suggest the value of working to some plan and making a careful study of the needs of the farm and its workers before deciding just what kind of a house to build. The plans which we give in this issue may help some of our readers along these and other lines. The pictures which are shown may offer a suggestion which will help someone.

Above all things we suggest that the modern home should be well supplied with porches and screens. There should not only be plenty of light in the daytime but thought should be given to the matter of good, clear light at night. Most cases of poor eyesight at an early age are chargeable to poor reading lamps. Heating a house is a matter of great importance and the winter which we have just gone through will suggest to our minds that this should not be overlooked. The modern home has plumbing and running water. These things may be included if the old house is to be remodeled.

Our suggestion is that time and study be spent on these subjects before the final decision is reached as to just what to build or just how. A house will usually cost a little more than is figured on in the first place, but that's true of any building. When you do build, build right and avoid repairs and changes which you would otherwise have to make too soon. And remember that money properly spent on the farmhouse is not money thrown away. It will add greatly to the value of your farm if you should have to sell.

Wisconsin Banker-Farmer Conference.

The second banker-farmer excursion to the college of agriculture at Madison will occur March 13th. The tentative program for the Banker-Farmer Conference, March 13th and 14th, has been arranged. Pres. J. R. Wheeler, of the Wisconsin Bankers' Association, will deliver the opening address. Dr. A. S. Alexander will speak on live stock farming and G. C. Humphrey will give some pointers on how to get the most out of the dairy herd. Other addresses, including the following: "Controlling Oats Smut, Potato Scab and Other Plant Diseases," by R. E. Vaugh; "Making the Farm Pay," by D. H. Otis; "The Banker-Farmer as an Unbeatable Combination," by Dean H. L. Russell; "Agricultural Teamwork in Wisconsin," by L. F. Graber; "Hog Cholera and Its Control," by F. B. Hadley; "Testing of Soils," by W. J. Geib; "Alfalfa For More Wisconsin Farmers," by R. A. Moore. On Tuesday evening, March 13th, Madison's annual horse show will be held in the live stock pavilion. All of the live stock herds owned by the Wisconsin College of Agriculture will be on parade.

Messrs. H. J. Maxwell, of Princeton, and B. M. Smith, of North Lake, are the special committee representing the Wisconsin Bankers' Association in charge of the Banker-Farmer Conference. The agricultural committee of the Wisconsin Bankers' Association includes G. W. Dudley, chairman, West Salem; H. J. Maxwell, Princeton; L. A. McAlpine, R. M. Orchard, Muscoda; B. M. Smith, North Lake; J. M. Smith, Shell Lake, and W. A. Von Berg, Mosinee. This committee has recently completed arrangements for a new set of monthly bulletins for 1917. The February number on "How to Get Started With Alfalfa," by L. F. Graber, having already been distributed. Other bulletins and their authors are as follows:

March—Washing Made Easier, by Miss A. L. Marlatt.
April—Vegetable Garden, by J. R. Hepler.
May—Prevent Weeds From Seeding, by A. L. Stone.
June—Wisconsin's Best Crop—The Child, by Miss A. L. Daniels.
July—Flytime and Milk Production, by R. T. Harris.
August—Sanitation in Stables, Pens and Pastures, by F. B. Hadley.
September—The Right Sire and How to Manage Him, by D. S. Bullock.
October—How the Short Course Helps, by D. H. Otis.

The first annual banker-farmer meeting was held March 28 and 29, 1916. It attracted a large crowd, but there should be twice as many present this year. The meetings are worth while.

Wisconsin Legislature.

Several bills now up before the legislature will be watched with interest by Wisconsin farmers during the coming week. Both are designed to lessen the danger from infectious diseases and prevent their spread from farm to farm. Milk is the best carrier of germs, as milk has all the proper conditions necessary for the successful growth of bacteria—heat, moisture and food. It is in the milk, therefore, that these germs thrive, and through the distribution of creamery and cheese factory by-products that diseases are spread from one farm to another. In the usual cheese factory or creamery the whey and skim milk are returned to the farmers who use this milk for feeding calves and pigs. If the herd of one of the factory patrons is diseased and the milk accepted by the factory, the germs from such milk will be distributed through the whole vat of skim milk or whey and unintentionally be the cause of numerous infections of other herds. The bill now under consideration will compel the factory to safeguard against this by pasteurizing these by-products before their distribution to the patrons.

As a measure of compensation in the case of diseased herds, the bill provides for the establishment of quarantined herds under supervision of inspectors from the State Live Stock Sanitary Board and recommends the disposal of the product of infected herds by legitimate means, thus preventing the financial losses which heretofore accompanied the quarantining of a herd. Provision is also made for safeguarding the health of communities in infected and quarantined areas. Veterinarians and farmers are held responsible for a report on diseases immediately following their discovery. As a measure for the establishment of these regulations in all strictness, the state department of agriculture is empowered to assume full charge of the affairs in a community and through its agent the live stock sanitary board adopt such measures which will most speedily bring about a return to normal conditions.

A bill providing for the appraisement of animals on a uniform basis has been introduced by two different legislators, but includes the same essential points. In brief the diseased animals would be appraised by a state inspector and paid for on the basis of 50 per cent of the estimated valuation. No matter whether there were lesions, no lesions or lesions by the hundred, the inspection would pay no heed to this. The animal condemned would simply be appraised and paid for by the state on the above basis. The maximum value that can be placed on any animal, according to this bill, is $250. Certain provisions are attached to a payment for condemned stock. For instance, no payment will be made unless the herd having such animal or animals is cleaned up altogether and all cattle tested. The owner must furthermore agree to test his herd in the future. The idea behind these requirements is that the state pays for progress and ought not to pay the man that refuses to clean up his herd and safeguard it in the future. It also aims to protect the state from being forced to pay out sums for diseased animals to the same farmer at each discovery of a new case that might have been avoided if all infected animals had previously been removed.

Both bills have the backing of Commissioner of Agriculture Norgord.

The Horse With Itchy Legs.

This is a very common trouble among heavy horses working in mud and wet, and, of course, specially prevalent in winter. The irritation may be due to "mange," or "grease," and all this aggravated by the character of work done, and the system of management pursued.

The subjects are generally hairy-legged horses, and there is often a disposition to clip the heels of such animals. This should not be done, although there is no harm, in facilitating cleaning by plucking out some of the hair by means of the finger and thumb dipped in powdered rosin.

The legs should not be clipped, however, since the hair serves a useful purpose in protecting the skin against the irritation of wet dirt, and they should not be washed on a return from work. There would be no harm come from washing, if it were thoroughly carried out, and the legs rubbed dry, which is a slow and laborious business, particularly in winter and the early spring months. What generally happens is that the washing, sometimes limited to driving the horse through a pond, is prefunctorially carried out, the dirt being washed into the skin instead of off the hair, while the legs are left wet, chilling the skin of a part remote from the center of circulation, because the attendants have not time, even if they had the inclination, to rub them dry. When the horse comes in wet and muddy, the best plan is to remove the thick of it with the scraper, such as saddlers sell for the purpose, and which is much preferable to the scraper made out of a rusty piece of barrel hooping, and to put on flannel bandages.

When the limbs are dry, brush out the remainder of the dirt with a brush and a coarse wisp of straw. To allay the irritation apply, when clean, a lotion of acetate of lead and sulphate of zinc, of each half ounce, rainwater one and one-half pints. Heavy horses with itchy legs are a nuisance. They make night hideous with their stamping and scraping, batter the stable to pieces, break their shoes, injure their legs and feet, and getting no rest at night, do not work efficiently during the day.

The Rustling Sow Is Most Profitable.

No man can afford to carry a sow through the winter if she is only to raise three or four pigs in the spring. The cost of her keep, charged up against so small a litter, means that the young pigs cost too much as feeding propositions. The entire herd ought to raise an average of six or even seven pigs per sow. While it is true that the prolificacy of the strain that one is handling is an important factor, still it is a well-known fact that there are enough pigs farrowed every spring and the trouble is that too many are lost before they are twenty-four hours old.

In this whole business there are just two principles upon which one must depend for his success. In the first place, the sows ought to be fed something besides corn during the last half of the gestation period at least. Sometimes a mixture of small grain, such as oats and barley and corn, will bring a bunch of sows through in good shape without using any of the high-priced concentrates. These grains are expensive now and, therefore, one can well afford to use either oil meal or tankage. They may be used sparingly and with gratifying results. One pound of tankage to twelve or fifteen pounds of corn will contribute immensely to the building up of the sow and her litter, and where oil meal is used one pound of this product to eight or ten pounds of corn will produce excellent results. The theory of using these products is simply this, that they contain the elements absolutely essential to growth and if they are not fed in liberal quantity, or some substitute containing similar ingredients, one need not look forward to having his sows farrow strong litters.

The other factor that is of the utmost importance is that of exercise. Keep the sows on the rustle. Some

breeders even go so far as to say that they can use a corn ration without any supplementary feed and yet have strong litters if they compel the sows to spend most of their daylight hours in the open. Whether this is true or not, it is important to remember that exercise is absolutely essential.

Successful swine men may not need this advice, but we venture to say that there are tens of thousands of renters and young men who are beginning farming in the corn belt who would profit very largely during the coming year if they would accept our counsel in regard to the importance of exercise. One need not have expensive quarters for his brood sows and young pigs, because excellent success is often attended by the use of the so-called individual house. Turn the sows out into a pasture every day during the winter and compel them to stay away from the yards and sheds, and if anything like a sensible plan of feeding is followed you may absolutely assure yourself in advance that you will save an average of anywhere from six to eight pigs per sow. The fat, lazy herd will not make this record, but active, vigorous sows and gilts will do it every time.

The pig that is strong at birth is not going to be downed easily by damp weather, nor is he going to succumb quickly to the cold. He comes into the world as a fighter and he is prepared right from the start to take care of himself if given half a chance. When you see a weak litter scrambling around the pen without showing the slightest disposition to take nourishment you may depend upon it that it is not their fault, nor is it the fault of the sow, but it is the fault of the caretaker who has failed either to feed properly or to exercise rationally. If there is no milk for the little fellows when they arrive nature puts that fact into their heads, thus saving them the trouble of investigating for themselves, and one by one they drop out, while the owner dolefully maintains that he had "bad luck," whereas it was not luck at all, but bad management.

Spreading Straw on the Land.

The day is not far distant when it will be considered just as practicable by the majority of farmers to spread straw on the land as it is to apply farmyard manure by means of the spreader. Machines to perform this task have been brought to a state of marvelous perfection so that the straw is spread evenly and the work is done quickly. Mr. Chester Maring, of Dickinson county, Kansas, has had some experience in spreading straw on his land. He has tried it out with winter wheat and finds that it prevents winterkilling, and, furthermore, a coating of straw he has discovered tends to keep the moisture in the land so that the crop grows vigorously in the spring. Mr. Maring says that he has many times observed clouds of soil rising from a wheat field with no straw mulch, whereas in a mulched field not a particle of dust was flying in the air. He has found that the spreading of a light coating of straw on the surface will greatly increase the yield of potatoes compared with a similar area where no straw is used.

Mr. Henry Sprau, of McLean county, Illinois, is also enthusiastic over the practice of spreading straw on the land. He points out that in the past thousands of straw stacks have been burned in his neighborhood in order to get them out of the way, but now the straw is being spread upon the land and the practice is bringing larger crops. He calls attention to the fact that sandy soils are made more compact, while heavy ground is loosened up by an application of straw. The spreading of straw on the surface of a clover field has prevented winter killing and the yield of corn has been greatly increased where the practice has been followed of putting straw on the surface in the fall and plowing it under in the spring.

Mr. W. T. Squires, of Vermilion county, Illinois, has had considerable experience in using straw as a mulch. He finds that it adds humus to the land, which, in turn, liberates plant food. Very good success has been obtained from spreading it over fields of small grain, as it helps to conserve moisture and checks weed growth. He considers that a good straw-spreading machine is a money-maker and, in his opinion, no farmer should be without one.

Mr. T. H. Behrends, of Logan county, Illinois, expresses the belief that straw is worth $5 a load if it is put back on the land in the proper manner. He believes that on one twenty-eight-acre wheat field an application of straw increased the value of the returns from that field at least $100. This, of course, makes no allowance for the benefit that resulted to the soil in after years. Certainly all the humus and all the fertility contained in straw would not be dissipated in the one year, but corn or other crops would be increased for several years as a result of the application.

We could go on quoting from others who have used straw spreaders, but we do not believe that it is necessary at this time. In many localities it is now regarded as almost a criminal offense to burn straw because our soil is hungering for the very ingredients that are supplied by this product. The old idea that material had to be rotted before being applied to the land no longer holds. Indeed, it is much better for the rotting process to go on right in the soil, because in that case there is no waste during the decomposition period. The soil quickly seizes the ingredients as they are liberated and they are made ready for the use of crops by chemical activity.

A Big Crop Year.

The approach of another crop season, with the prospects for bumper yields better than they have ever been before in the history of the grain belt, makes it imperative that every farmer should take advantage of every opportunity to increase his efficiency and to insure every acre yielding to its utmost. The Wisconsin Farmer will be edited this year with this purpose pre-eminent. The paper will be filled with the most practical articles obtainable by men who are practicing what they preach and who know by daily experience the problems which beset the many readers of this paper. We shall endeavor to make The Wisconsin Farmer of such practical utility to every member of the farm household that to miss a single issue will be a most serious loss.

This being the case, we take this means to urgently recommend that all readers whose subscriptions have recently expired, or which expire in the near future, renew without delay so as to insure their receiving every number. Not only this but we earnestly hope that all our present readers will see to it that their friends and neighbors are made acquainted with the merits of this paper and thereby will be induced to become members of our large circulation family.

Our advice is this: Renew your subscription today, without delay, and see to it that as many of your friends and neighbors subscribe as are possible.

Amount of Hay For the Work Horse.

One of our subscribers, Mr. A. F. Saxton, asks for information about the amount of hay to feed daily to a horse weighing from 1,200 to 1,300 pounds. Reference is made to the amount needed when the horse is doing regular field work involving plowing, disking, harrowing and seeding.

In answering an inquiry of this kind it must be conceded in the first place that considerable variation is allowed. A horse weighing 1,200 pounds will need approximately thirty pounds of provender daily when at heavy work, that is, thirty pounds of hay and grain. The grain part of the ration may vary anywhere from one-third to two-thirds, or, in other words, from ten pounds to twenty pounds daily. Naturally, where hay is cheap and grain is dear one would want to feed as much hay as possible, but from the standpoint of accomplishment in the field this kind of economy may be carried too far. If, for example, you undertake to feed twenty pounds of hay and ten pounds of grain daily to a work horse during the spring months you would find this ration to be too bulky and the horse would fall in flesh. On the other hand, turn it around and feed twenty pounds of grain and ten pounds of hay daily and the work horse fed in this way ought to stand rather severe labor every day and yet maintain his flesh.

As a general rule, it may be said that the country horse is allowed to consume a much larger quantity of roughage than the city horse and no man can be criticized for using up his cheap roughage and saving his grain. In his work entitled "Management and Breeding of Horses," M. W. Harper gives a number of rations that have been used with good results. For a 1,400-pound horse nine pounds of oats, nine pounds of corn and eighteen pounds of mixed hay daily answered the purpose well. In another instance horses weighing 1,220 pounds were fed eight pounds of oats, six pounds of corn, two pounds of bran and ten pounds of hay daily. Then, again, horses weighing 1,230 pounds were fed eight pounds of corn, seven pounds of bran and ten pounds of hay daily and the outcome was satisfactory. In the case of horses weighing as high as 1,600 pounds a good ration was nine pounds of oats, nine pounds of corn and twenty-four pounds of hay. Another instance is cited where 1,600-pound horses were fed twenty-three pounds of oats daily and twelve pounds of hay. A horse weighing 1,000 pounds doing moderate driving maintained his flesh on eight pounds of oats and ten pounds of timothy hay daily. It was also found that good results were obtained from feeding a 1,000-pound horse doing moderate driving four pounds of oats, four pounds of corn and ten pounds of timothy hay daily. The same horse, doing heavy driving, had his grain ration increased to fourteen pounds daily and was fed the same amount of hay.

These are rations that have been tried out and they have given good results so that they may safely be used by those who are interested in compounding a ration that is reasonably economical and yet one that contains plenty of energy to maintain the work horse while he is at strenuous labor.

WHILE FATE TREMBLES IN THE BALANCE,

Voices of the Past Speak Words of Encouragement and Sympathy.

Getting Pasture in a Hurry.

A Nebraska subscriber asks for information in regard to the plan that should be followed in establishing a quick pasture. He writes:

Can you advise me through the columns of your paper as to the best method of obtaining a quick pasture for the following summer? I have about ten acres of thin upland which it is my intention to take into the pasture. This land was in corn last year. The soil is a mixture of clay and sand. I would like to sow some grass which would make a permanent pasture. Blue grass has been tried on the same kind of soil, but with poor success, as the soil seems to dry out too quickly for the grass to make a start. Would it be advisable to sow a mixture of clover and timothy and oats and then turn stock in say the latter part of June? In this manner the other pasture could be given a rest. What mixture would you advise sowing and what time would be best to sow?

There is only one way to obtain a quick pasture and that end is attained by sowing crops that germinate quickly and make a rapid growth after germination. These conditions are met by the cereals, either oats, barley or wheat. A mixture of one and one-half bushels of oats and the same amount of barley per acre ought to give good results. Wheat is a later maturing crop and sometimes it is advisable to sow a peck less of oats and also a peck less of barley and add two pecks of spring wheat. It must be borne in mind that all these crops mature normally whether they are pastured or not, and the purpose in adding wheat is to extend the grazing season a little longer.

If it is the intention to make a permanent pasture out of this field, the plan of sowing four quarts of timothy and four quarts of clover seed per acre may be followed. Sow as early in the spring as possible, because a considerable part of this seed is hard and a few frosts after seeding will aid rather than retard germination. As blue grass does not do well under this subscriber's conditions it is altogether likely that a western grass would have to be used for permanence and in that case the experiment station at Lincoln should be consulted, because that institution has made a close study of grasses that are adapted to different parts of the state. Those who are facing the same problem as this subscriber and who live in localities where blue grass does well cannot do better than sow along with timothy and clover anywhere from five to ten pounds of blue grass seed. It will not show up much the first year, and even the second year it might be destroyed, but after the clover dies out it will gradually take possession and finally even timothy will have to give way to it.

E-B Farm Tractor

Model L—12-20 Horse Power

A four-cylinder, 2-speed, light-weight tractor of great power, suitable for any size farm. Will pull the implements you now have on your farm—gang plows, harrows, mowers, binders, manure spreaders, road drags or graders. Will also operate your ensilage cutter, feed grinder, circular saw, etc. Does more work than horses—costs less and is so simple anyone can run it.

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Tractor on a Dairy Farm.

To the Editor:—Our farm is a dairy farm and we farm intensely. We only have 160 acres, but some of this land we raise two crops on, so you might say we are working nearly 200 acres.

Four years ago I allowed some experimental work on my farm. We had been looking for a light tractor that would not pack the ground and at the same time heavy enough to do away with our heavy horses and an extra man. After seeing many tried out and watching experimental work at different stations we purchased the 8-16 tractor, which any level-headed man can operate, but must remember to use lubricating oil.

This tractor is doing the work of seven horses and two men. It pulls three fourteen-inch plows and a two-section drag. For oats we do not plow deep, but our land we are plowing eight to nine inches, turning over a bottom that has never been worked before. Where disking is required we use a tandem disk which does the work of two ordinary disks that would require four horses each. All plow manufacturers have their plows equipped with the "one-man lift."

In plowing we have found that it is to our advantage to have oblong fields. I have laid out mine in forty and fifty-acre fields. We have divided this in three lands, leaving about a rod all the way around. This we plow as a fourth land. This enables us to lift the plows and have room to turn and go back on next land. Then when we have finished we plow the fourth land from inside, leaving our home stretch up the fence line and out the gate. We never turn on the plowed ground, though we are using extension rims. This particular tractor weighs no more than four large horses.

Were it a larger farm we would recommend the use of two such plowing outfits, for the reason that when you go beyond this size it requires two men, one for the engine and one to handle the plow. The weight is much greater and I think it more economical to run two outfits.

We are plowing three-fourths of an acre an hour. The cost of lubricating oil and kerosene at the present market is about 17 cents per running hour. The advantage of the engine over horse power is that, whereas it is slower, there is no resting on the corners or on a hot, muggy day, laying off for a long nooning. We find at the close of a day that the engine has accomplished much more than the seven horses were doing on our gang and sulky plows.

When hay is ready to cut most farmers are busy cultivating corn. We take our horses off long enough to cut down the hay and later to roll it in windrows. Then we use our tractor for pulling the wagon with loader attached. The hay comes up steadily. One man, by hustling, will load the load. In this way one loads on an enormous load. We use a second wagon in the same way, then when the team comes up from the cornfield it takes in one load while the tractor takes in the other one, thus giving a team for drawing up the hay.

We have a short binder pole which we use on our grain binder for cutting oats. This is slower than three horses, but as we run right through the noon hour and up in the evening, it is doing the work of two three-horse teams.

We use this engine for filling our silos and put up some 300 tons. We cut what corn there is left standing with our corn binder with the short pole attached. It also knocks down all corn stubble and makes a smooth plowing. We also use this engine for shredding the balance of our stalks.

After that about the only use we have for it during the winter is as power for grinding feed.

In regard to horses, we must have a team to use on the spreader and cultivator. From this team of Percheron mares we try to raise one or two colts each year and generally are breaking a team which is used as second team in cultivating. It is still profitable for farmers to raise good horses.

If there is any other question we could enlighten you on we would be glad to do so, for I know it is the coming power for all farmers.

Edward Salmon.

Method of Handling Soil For Potatoes.

To the Editor:—I have been experimenting with potatoes from common seed which I grew on town lots for a number of years. I now have a good standard seed potato, Green Mountains. I took first place at the county exhibit and might have taken a place at the state potato show, but the county representative let them freeze in transporting them to town. I also took second place at the county fair, without sorting, at field run. I have enough seed of these potatoes to plant five acres next year.

I am going to plant them on clover land which I turned over in July last year, the clover being about one and one-half feet high. Next spring, after manuring it, I am going to plow it back so as to get the fertilizer on top, and just before planting will drag it thoroughly with a spring-tooth drag. I don't believe in a disk because it packs the soil underneath and closes the pores of the ground so the warmth cannot come up. I have found that by cultivating just before I expected a frost it wouldn't freeze so easily as where it was disked. I believe in keeping my fields in rotation so as to raise one crop of potatoes, followed by one crop of oats seeded down to clover to stand for two years. I don't know much about farming, but through experiment I raised 800 bushels of potatoes from three acres on a field similar to this.

I would like to know what you think of my method of raising potatoes and would like to know if any of your readers can tell me how I could improve on it. I am going to plant about twenty acres of potatoes next year, but will have to use different seed. Last year I did field sorting for my potato seed. I used 30 cents' worth of Paris green last year. Aug. Dreger.

How I Acquired a Good Habit.

To the Editor:—Many years ago when I was a young boy of fifteen I was given the job of taking several crates of poultry to the city some fourteen miles distant. On the day previous to the excursion I remarked to my father that the double harness was getting rather old and unsafe to be used on the lively young team which we at that time possessed.

We had never given the harness any care other than to tie it up with binder twine in case parts of it gave out and I frequently feared that the whole rigging might some day collapse and give the horses their liberty.

My father was not at all impressed by this condition, however, for no accident had ever happened to him and my suggestion that a new harness be purchased was laughed to scorn.

Mother accompanied me on the drive to town and in spite of my misgivings the giddy team showed no inclination to test the strength of the old trappings in which they were incased. Having delivered the poultry, we began the homeward journey, the road leading past a race track which was in full view to the passers-by. Races were in progress that day and my mother, knowing my love for this diversion, proposed that we stop and watch.

I readily agreed and we remained until heavy western clouds told of an approaching storm, and, heeding the warning, we drove on. Lightning flashed and a terrible peal of thunder rent the air. The horses, frightened by the crash, ran very fast and I, in my effort to restrain them, pulled with all my strength on the lines. The tug was too much for the old harness and one line broke in my grasp. I was left with one line, a team which was now actually running away, and my screaming mother at my side.

To the right of the road rose a high bank; to the left a deep gully, and, though but a few moments elapsed in this position, I had plenty of time to regret that it was the right line which had broken. As I began to appreciate the awful consequences which would result to my delicate mother if the team should pull the wagon into that deep ditch on the left, I resolved to take a desperate chance. I crouched as far forward as the wagon box permitted and made a leap for the back of one of the galloping horses. Safe! I reached the upper part of the reins, which were close to the necks of the steeds, again pulled, and in a minute or two succeeded in stopping the team.

I repaired the broken line and we managed to reach home without further accident. When we related our narrow escape to father he replied not a word, but the next morning when I was taking the milk to a near-by village he said: "Stop in at the shop and get a new harness."

Since I have had charge of my own horses I have always borne in mind that early experience, but I have not always found it necessary to purchase everything new even to be safe with a brisk team.

Instead I try to keep the harness and every strap in it well repaired the year around. Further than this, during the months of February and March a thorough oiling is given all the leather parts and if there is any sewing or other work necessary it is done at this time.

I have found that by this treatment the horses have sound and safe harness ready for spring work when it arrives and besides tending to eliminate the danger of runaways it in the end is economical because I do not have to buy new rigging so frequently.

Waukesha Co., Wis. Subscriber.

Married or Single Man Which?

To the Editor:—I think farming is getting harder all the time in spite of the fact that farm implements are being improved. Wages have not only increased enormously but the right kind of help has become exceedingly scarce. I farm 260 acres of land and sometimes I am left entirely alone, so that you can understand that I have to hustle, especially when I tell you that we raise about 100 acres of corn every year and have the farm well stocked. I don't mind work, but I am not in love with drudgery and that is what it is getting to be, I fear. I have always been getting along with single men, taking these right into my home and making them members of the family. I have sometimes thought of building an extra house and trying out the plan of keeping one good married man all the year round. It would lessen the work in the home and possibly help of this kind would be a little steadier. I would like to see this matter discussed in The Homestead and I would particularly like to hear from those who have tried the plan of building an extra house and employing a married man. Law Questions.

Lost Steer—Owner the Loser.

A Subscriber, Spencer, S. D.—A had a public sale of stock on his farm. His neighbor B brought two steers to the sale and had them sold. C bought them, and gave his check for the price on the day of sale. When C went after the steers the next day after the sale, one of them was gone, and was never found. Who is the loser?

Answer.—When C bought the steers and paid for them on the day of sale he became the owner of them—the title to them passing at once—hence, he is the loser of the steer that cannot be found.

Giant Poultry Industry!

Hundreds of millions annually. Tens of thousands are making good money out of their chickens. Are you getting your share? Are you making poultry pay?

Year in and year out I am preaching this doctrine: *Condition your poultry.* Give them a chance by keeping their health good; keep up the good feeling and good humor; keep up the singing and scratching and you'll keep up the laying. It's the singing, good-humored, industrious hens that lay the eggs—the strongly fertile eggs that will give you good, livable chicks and healthy, fully developed fowls.

Don't Make a Mistake

What you make out of your hens depends on how you treat them. Pin your faith to DR. HESS POULTRY PAN-A-CE-A. It's the 23-year-old poultry preparation that has spelled success for so many thousand poultry raisers. It will do the same for you.

Feed Dr. Hess Poultry PAN-A-CE-A

A Tonic—Not a Stimulant

Makes Poultry Healthy Makes Hens Lay Makes Chicks Grow

Now that mating time has arrived, it's up to you to see that your poultry get a tonic and internal antiseptics to make them vigorous and free of disease. *Therefore, feed Pan-a-ce-a.*

In that condition your hens will lay better, you will get more healthy, fertile eggs and the chicks will stand a better show of reaching maturity. *Therefore, feed Pan-a-ce-a.*

And, before the hatches come, I want to warn against gapes, leg weakness and indigestion, for these ailments are responsible for half the baby-chick losses. *Therefore, feed Pan-a-ce-a*—it will save you these losses.

My lifetime experience as veterinarian, a doctor of medicine and poultry raiser has taught me the needs of poultry under all conditions; that is why I urge you to try my scientific and long-tried prescription.

Prices: 1½ lbs. 25c; 5 lbs. 60c; 12 lbs. $1.25; 25-lb. Pail, $2.50
(Except in Canada and the far West)

Dr. Hess Stock Tonic

There's nothing better to put horses in trim for hard spring and summer work. Milch cows need it just now to prepare them for the heavy milking season ahead. Dr. Hess Stock Tonic makes all stock healthy, keeps them toned up and expels worms. Sold under money-back guarantee. 25-lb. pail, $2.00; 100-lb. drum, $6.50; smaller packages as low as 50c (except in Canada and the far West and the South).

I'll Save Your Veterinary Bills

When you have a sick or injured animal or ailing poultry, write me, telling symptoms. Enclose 2c stamp for reply and I will send you prescription and letter of advice free of charge.

Dr. Hess Instant Louse Killer

Kills lice on poultry and all farm stock. Dust the hens and sprinkle it in the nests; or, if your fowl are provided with a dust bath, sprinkle Instant Louse Killer in the dust bath every other week—the hens will do the rest. Also destroys bugs on cucumber, squash and melon vines, slugs on rose bushes, etc. Comes in handy, sifting-top cans. 1 lb. 25c; 3 lbs. 60c (except in Canada). I guarantee it.

DR. HESS & CLARK, ASHLAND, OHIO

MY GUARANTEE

So sure am I that Dr. Hess Poultry Pan-a-ce-a will help make your poultry healthy, help make your hens lay and your chicks grow, that I have told my dealer in your town to supply you on condition that if Pan-a-ce-a does not do as I claim, return the empty package and get your money back.

Build a Concrete Stock Tank

A concrete stock tank keeps the water sweet and cool. A concrete floor surrounding it does away with the muddy bog where the stock must stand and drink. The stock tank and the floor are simple and inexpensive to build.

Concrete can never rot nor rust. There are no rusty nails, splinters or sharp edges about a concrete stock tank. Use common lumber for the forms—haul your own sand and pebbles from the pit—and see your local dealer for your Portland cement. Mix the materials ONE part Portland cement, TWO parts sand and THREE parts pebbles. This is the same material as that used in the Galveston Sea Wall, which saved that city from destruction in the great storm of 1915.

Write today for our booklet "Concrete Troughs, Tanks, Hog Wallows, Manure Pits and Cisterns." Just say "Send me Booklet No. 142."

10-Day Trial

Kirstin Stump Puller

This KIRSTIN Horse Power Puller, used by the KIRSTIN METHOD, is the cheapest and fastest way known for clearing land ready for the plow. We will guarantee you a saving of 10% to 50% over any other method. Over 40,000 in use. All steel construction combines great strength and light weight. Clears two acres from one anchor. Easily moved. Can be used with single, double, and triple power as needed. Will pull any size stump. Guaranteed fifteen years, flaw or no flaw.

Automatic take-up for making quick hitches. Foot for foot of cable, KIRSTIN covers more ground than any other machine. Easy on horses and man. Ten-day trial in your stump field.

Now—today—quick—write for our special Profit Sharing Plan to early buyers and our big Free Book—*"The Gold in Your Stump Land."*

A. J. KIRSTIN COMPANY
6546 Ludington St. Escanaba, Mich.
Largest makers in the world of Stump Pullers—both One Man and Horse Power.

Sensible Housing For Hogs.

Ventilation and Sunshine Are Important Matters to Be Taken Into Consideration in the Erection of a Suitable Hog House.

HIS LORDSHIP, the hog, occupies at present almost the spotlight center of the stage. If he has been the "mortgage lifter" in the past when prices ranged from 3 to 6 cents a pound on foot, what shall we say now when values are running from 8 to 12 cents a pound? He is not only rooting the mortgage off the farm at breakneck pace but he is making it possible for his owner to enjoy the luxuries of life in a manner never before known. It is not uncommon to find instances where one litter of pigs sold for $300 before they were ten months old. These figures are simply astounding, and there is no immediate prospect of a serious slump in values. Under the circumstances it would be unadulterated shortsightedness on the part of any man to neglect his hogs during these piping times. The Wisconsin Farmer has given a good deal of attention this winter to the care and management of hogs, including methods of feeding, but at this time a word is in order in regard to methods of housing.

There is a wide range to choose from because some breeders are having exceedingly good success with the so-called individual house, costing anywhere from $15 to $25, while others are loud in their praise of the central plant surrounded by suitable pens and yards. To the latter type belongs the so-called Iowa community sunlit hog house, which has been originated and developed at the Iowa Experiment Station. As indicated in the illustration, the walls of this house are made of hollow tile, which means that advantage is taken of a dead air space within the wall, than which there is no better means of keeping out the cold. This house is designed to extend from north to south, so that from sunrise to sunset the warm rays of the sun are shining into the pens, a series of windows being placed in the roof for this purpose. It will be noticed in the illustration that there are two ventilators placed on the top, a most important feature of hog house construction. In the building of any hog house provision must be made to carry off the moist air which emanates from the pens and it is claimed for the hollow tile house that the amount of moisture in the interior is reduced to the minimum. It is impossible to overemphasize the importance of plenty of direct sunlight. The sun is the great germ destroyer and every swine breeder has scores of times observed little pigs snuggle themselves together in order to catch a ray of sunlight. It may be built any desired size, but a very convenient size is one twenty-two feet wide by thirty-two feet long. This will allow for ten pens, five on each side, 6x8 in size, and there will be a six-foot alley through the center. By dropping out one pen a feed bin can be placed in one corner. In the construction of a house of this type it generally pays to put in a concrete floor right in the beginning. Then you have a permanent structure that

THE SO-CALLED SUNLIT COMMUNITY HOG HOUSE.

SUNSHINE PENETRATES GLASS ROOF AND WARMS INTERIOR.

A 4x8 HOUSE BUILT ON RUNNERS.

is easily kept clean and disinfected. By the sensible use of bedding little pigs will do well on this kind of a floor and in any event little expense is involved in putting down a temporary, movable wooden floor. This might be needed at times when the weather is damp and there is but little sunshine.

Turning to an entirely different kind of hog house, we find types that are inexpensive and yet at the same time they answer well the needs of those who are not in a position to make the outlay for a permanent hog house. Generally these houses are 6x8 in dimensions and they are built on 4x4 runners. In some instances glass is placed in the roof, while in other cases a hinged door answers the purpose well. The use of the movable house makes it possible to use pastures rather more conveniently than where there is a central hog house. With one of these houses it is possible to place the sow and her litter in a small pasture and the pigs raised without the annoyance of having one litter rob another. Those who have used this system are able to raise a much more uniform bunch of pigs than where all sows run together. By placing the houses on new ground from time to time there is not the same danger from infection as there is with a central house, though it must be said of the latter that where concrete is used for the floors it is not expensive to disinfect. Another argument in favor of the individual hog house is that such a house is quiet at farrowing time and one sow can be placed in her own little dwelling so that she will not be disturbed by other members of the herd. Then it is entirely practicable where a considerable number of hogs are raised for market purposes to place the small houses in a row and in that case they make a good windbreak with a little straw or manure banking, and they furnish ideal sleeping quarters for fattening hogs. By opening the roof door part way good ventilation is obtained and there is not the same danger of piling up as there is where a large number of hogs are allowed to run together in one shed.

The Wisconsin Farmer is of the opinion that many individuals on rented farms who are not furnished suitable equipment in the form of a central hog house would be able to get excellent results by building a few of these movable types of hog houses. The cost is not excessive and if it is not convenient to move them at the expiration of the lease they generally sell to a neighbor for all the material cost in the first place. We have seen many instances where 100 and even 200 hogs were raised every year when there was no central plant whatever, but the hogs taken care of during the entire year by these movable types of houses.

Boys' Stock Judging Contest.

Wood County Agricultural School was declared the winner of the second annual Wisconsin Boys' Stock Judging Contest, which came to a close at Madison, February 10th, the last day of Farmers' Week. Nearly 125 schools took part in the preliminary elimination contests which were held during the last two months. Twenty-five of these sent teams to Madison to represent them in the finals which lasted two days. The Wood county school from Grand Rapids won by the small margin of 4.6 points. The total score made by the three boys, Carl Olson, Harvey Ward and Albert Anderson, representing the school was 1,454.2. They were coached by W. W. Clark, their principal.

Chippewa Falls was second with a score of 1,449.8 points. W. C. Christensen coached the team composed of Rex Carew, Clarence Reed and Truman Woodruff.

Third place was won by Frederic high school. George Larson, George Claude and Earl Fahland made a good showing with 1,442.2 points to their credit.

Fourth place went to Markesan high school. Alan Densmore, Erwin Eckert and Robert Boerner composed the Markesan team.

Individual judging honors went to Robert Shannon, of Ellsworth high school. He made 518.2 points out of a possible 600. Foster Claflin, Mondovi high school, was second with 516.6 points and was closely followed by Harvey Ward, of Grand Rapids, whose score was 515.8. Erwin Herrewig, Wonewoc, with 496.8, and Robert Boerner, Markesan, with 492.8 points, were other high men.

The final contest at Madison each year is the climax of the local judging done in the twenty-five agricultural districts of the state. The winner of each district sends a team to the college during Farmers' Week where the best team is selected by a two days' contest in judging beef and dairy cattle, horses and swine. The best men the college has to offer give out the decisions in each event. This year A. C. Oosterhuis passed on the work in dairy cattle, J. L. Tormey on the beef judging, J. G. Fuller in the horse judging and A. H. Kuhlman on the swine judging. T. L. Bewick had charge of the entire work. The actual placing of the animals is counted as 60 per cent of the work and the oral reasons of each boy for such placing forms the balance. The schools included in the finals were Waldo, Prairie du Sac, Milton Junction, Livingston, Markesan, Chippewa Falls, Patch Grove, Pewaukee, Belmont, Peshtigo, Stoughton, Mondovi, Marshall, Wonewoc, Frederic, Athens, Grand Rapids, Wood County School of Agriculture, of Grand Rapids; Cashton, Bayfield, Ellsworth, Rio, Wabeno, Walworth, Boscobel and the Marathon County School of Agriculture at Wausau.

Last year's contest was won by the Milton high school, with Athens high in second place. Under the auspices of the Wisconsin Live Stock Breeders' Association the agricultural extension department of the college and the state board of education these contests have become an annual feature of Farmers' Week and they help in a large way to make the local contests of the separate districts more interesting, as the pupils realize that the winning of a local contest gives them a chance to go to the state college for a final tussel to decide state honors under the able judgment of the state's biggest men in this work.

A Farm Gas Plant.

To the Editor:—I am writing you in regard to our gas plant which was installed December, 1915, by one of the dealers of Mauston, Wisconsin. I am glad to say that so far this plant has proved to be very satisfacotry. It has given us a safe, mellow light, free from odor or noise, without much trouble or expense after the original cost of installing it. We have run over a year without any expense, except for gas and three new mantles. We have five lights and a flatiron in the house and hope to soon have lights in the barn, and also to use the gas to run a motor for pumping water, operating separator, washing machine and many other such things about the farm. This gas can also be used for cooking, heating water, etc. The gas comes in liquid form in large iron bottles. The bottle is placed in a cabinet and the gas passes from a bottle into an expansion tank and from there is forced through pipes wherever wanted. The gas plants come in three sizes and we have the medium size.

If any of your readers would be interested in knowing more about gas plants for farms, would be pleased to give any information which I can.

Mauston, Wis. Albert Lange.

PLANS FOR FARM HOMES.

What Wisconsin Women Have Given as Their Opinions Concerning Best Arrangements of Rooms in Up-to-date Modern Farmhouse.

THERE is something fascinating connected with the planning of the farmhouse. Farm women find a keen enjoyment in telling their ideas of a model farmhouse and the conveniences it should contain. On a great many farms this talking and planning has been about as far as house building has gone, but the day of the better farm home is here. Even the farm folks, who have limits as to their income no longer hesitate when it comes to making an investment in a better farmhouse. The farm woman is justified in insisting upon her rights in this respect. The

Plan A—Fire place, large living room and hall, with den or office.

farmer of today does not follow on foot behind the wabbly corn cultivator. No, indeed, he rides. He rides when he sows as well as when he reaps. His work has been immeasurably lightened by modern farm machinery, but why not extend the benefits of modern conveniences to the house as well as the barns and fields? On many farms the women folks still carry water from the pump outside of the house. Rain or shine, hot weather or cold, in all seasons alike, every drop of water must be carried into

FIRST FLOOR PLAN

Plan C—Suggested by a Wisconsin farm woman.

the house, just as it was done hundreds, and even thousands, of years ago. A famous writer once said woman's household duties began with the discovery of fire. Her first work was to tend to the fire on the hearth. In too many instances she is still doing it.

In an effort to obtain the ideas of the women of Wisconsin as to the best arrangement of a house for farm conditions, the college of agriculture recently sent out a set of questions to a number of leading farm women in the state, and twenty-five of these answered in detail the questions asked and most of them submitted rough sketches of their idea of a model home. The summary of these answers is interesting.

Twenty-two wanted a two-story house rather than a one and one-half-story structure.

Nineteen preferred a bathroom on the second floor.

Nearly all were agreed on a wash room at the rear of the building, where the farmer and the hired help could wash before entering the kitchen. Nearly all agreed that concrete would be the best floor for this room.

In the matter of heating the house, there was a wider range of choice. Eleven wanted hot water, eight hot air, and four wanted steam heating. Two did not make any choice.

About half were in favor of a toilet

Plan B—Provides for office room on the first floor.

on the ground floor, while the others did not consider this essential.

Seventeen wanted electric lighting. The balance preferred gas or lamps.

All were in favor of a sewage disposal system.

All but two wanted a screened living porch.

All but five wanted the dining room separate.

Fifteen expressed themselves in favor of a built-in bookcase.

All but two wanted a built-in china closet.

All but one favored built-in cup-

SECOND FLOOR PLAN

Plan C—This woman prefers bath room down stairs.

boards. Eight wanted a pantry in addition.

In the dimension of the kitchens, the most of the women preferred a kitchen 12x14. The other estimates varied from 12x15 and 16 to sizes of 10x10 and 10x16.

Twelve were in favor of a sleeping porch. Ten were opposed to the idea and three did not express themselves. Twenty asked for the laundry in the basement, four wanted it in the kitchen, and only one preferred the rear porch or a separate room with the wash room.

On this page are given some of the plans submitted. Plan A is the ground floor plan submitted by a woman in Trempeleau county. The first floor would include a living room, a dining room, a kitchen, a den or office and a wash room. The hall is perhaps too spacious, and by a little rearranging of the size of the rooms an extra room on the ground floor could be made possible. This woman believes that for the farm the bathroom should be on the second floor. Upstairs would be four bedrooms with roomy closets in each. She believes heat the most essential of conveniences, running water next in importance and sewage disposal following that. She believes that a lighting system is not quite so essential, but if the farmer can afford it he should by all means install this convenience. For such equipment as will give satisfaction in heating—either furnace, hot water or steam, an expense of $250, is to her

No Engine can be as good as the Galloway that doesn't have these exclusive Galloway Features.

Valve in the Head Type Cylinder
Note large exhaust valve. Engine head perfectly water cooled. Valve stems also, can't warp. Large intake valve, means ample charge of gas, perfect combustion. No fuel waste. Automobile-ground valves insure perfect compression.

Arch-of-Strength Cylinder Head
Positively cannot blow off. Held by steel studs—nuts perfectly seated, insuring the greatest possible strength in a cylinder head. Absolutely gas tight joint with end of cylinder. This type of cylinder head provides nearly double amount of water space found on other styles.

Sure-Fire Make and Break Igniter
Webster oscillating magneto makes blue-hot spark. Needs no batteries. Absolutely sure fire. Weather does not affect it. Eliminates all ignition troubles. Thousands in continual operation for years without replacing igniter points. Gives least trouble from soot or carbon of any type igniter we ever used. You will get results and satisfaction in using this type on your engine at any time of year, winter or summer.

Economy Carburetor
Worth $15 more on any engine, costs nothing extra on the Galloway. Cuts down fuel bills. Simple, positive air valve adjustment—regulated at will—easy starting in any weather. Mixes perfect fuel charge. Makes gasoline most perfect fuel. Has special cold weather valve which makes easy starting in cold weather. Also gets great power from small amount of gasoline. A great saver of high-priced fuel. Our own invention. Used on all Masterpiece engines. The logical carburetor for you to have on your engine, making it cheaper and better than kerosene.

One-piece Cylinder and Base
on all Galloway engines from 4 to 16 h. p. insures perfect alignment of cylinder, piston, connecting rod, crank shaft and flywheels. Absolute uniformity of wear. Only scientific and successful method of construction for large, heavy duty, heavy weight engines. Two-piece cylinders and frames cannot be kept in line.

LOOK! THIS 1917 MODEL!

Go over it point by point, feature by feature, compare it side by side with any other make of engine of the same rated horse power or the same bore and stroke! You will decide that no better engine is built. For years and years I have told you to compare the Galloway engines with other engines! That's why I have prepared my new 1917 special proposition. I want a Galloway Masterpiece 1917 model gas, kerosene or distillate engine in every township in every state between now and June 1st, and my **new 1917 prices** and selling plans will get them.

QUICK SHIPMENT **LOW PRICES** **HIGH QUALITY**

SIX 1917 SELLING PLANS --CASH OR TIME

No matter which way you want to buy I have a plan that will suit you—Cash, Bank Deposit, Half Cash—Half Note, All Note, Installment, and No Money Down, to responsible people. Galloway's guarantee is absolute satisfaction or your money back, and he pays the freight both ways. Remember my

$25,000 LEGAL BANK BOND ABSOLUTELY PROTECTS

you and every one of my prospective customers and proves my willingness to have every claim and statement I make fully investigated. I want you to try a Galloway engine on your farm—in your own shop. That's why I have prepared my new 1917 special proposition. I want a Galloway Masterpiece 1917 model gas, kerosene or distillate engine in every township in every state between now and June 1st, and my **new 1917 prices** and selling plans will get them.

NOTE 1917 IMPROVEMENTS

Adjustable bearings, no lost motion, develops way above rated horse power. Economy carburetor, worth $15 more on any engine, costs nothing extra on the Galloway—cuts down fuel bills. Large valves in head, exactly like highest class automobile motors, perfect scavenging, admits perfect combustible mixture. Double ball governor. Large, heavy flywheels. Big bore, long stroke, heavy weight, perfect balance, smooth running. Perfect lubrication, winter or summer. Webster magneto (extra) supplies blue-hot spark. Make and break igniter, never misses fire. Easy started, no cranking, needs no batteries. Cylinder and water pot frost proof. Galloway engines honestly rated, scientifically, accurately and handsomely built. Our description the truth. Shipments made from Waterloo, Council Bluffs, Kansas City, St. Paul, Chicago, whichever is nearest you.

GET THIS 1917 BOOK ABOUT ENGINES

I want you to have this new book about the famous Galloway Masterpiece engines. It tells you how to pick out, size up and judge an engine. Gives you engine secrets and facts. Tells why to insist on heavy weight, large bore, long stroke and low speed—why light weight, high speeded engines are not to be compared with Masterpiece engines and why you are asked four profits for some engines no better. Tells why we sell direct from factory to farm or shop at wholesale. How to install an engine and hook up machinery. How Galloway engines are built. How to lay out and build a cheap, efficient power house. Why our prices on high class stationary and portable engines and saw rigs are so low considering quality. The truth about engines is all set down in black and white. This book is a guide to saving money on every farm. That's why I want you to get it. If you expect to buy an engine I'll pay the postage and be glad to send the book. Ask today. A postal will do. Address me as below.

GABEL MFG. CO., HAWKEYE, IA.

mind, well warranted. She wants cupboards in the kitchen, china closets in the dining room and a laundry in the basement.

Plan B shows what a women in Fond du Lac county thinks a farmhouse should include. She wants a spacious sitting room, but no vestibule or hallway. A separate dining room leading off from this and opening direct into the kitchen. From the kitchen she plans the bathroom, which would necessitate a trip across the kitchen for the farmer and his help at every meal hour. This might prove more of a bother than a help, as this meal hour is the busiest time for the housewife. A bedroom opening off the sitting room could also be used as the farm office or as a sewing room. She is in favor of all modern con-

First Floor Plan

Plan E—Large living room and porch and bed room on first floor.

veniences, believing that, although not all are equally essential, most of them are within reach of almost every farmer, who can in fact better enjoy these conveniences than the city man. She considers running water of first importance with a proper system of sewage disposal second and heating is given third place in her judgment. Lighting is also an important item. Sleeping porches are just as beneficial on the farm as in the city, in the opinion of this woman.

In plan C the designer has avoided

Second Floor Plan

Plan E—Sleeping porch, sewing room and three bed rooms up stairs.

some of the mistakes of her associates, the outstanding features here being the wash room, the office and the helpers' room. The wash room here shown does away with the interference caused by the men folks when they are forced to go through the kitchen before each meal for the washing utensils. The back stairs leading to the hired man's room above enables the hired man to go to his room late at night without disturbing the family. The hallway, running the length of the house, keeps the kitchen private, as the dining room and all the other rooms can better be reached through it. An office is provided for on the first floor where the farmer can keep records and books and conduct his correspondence. The sewing room on the second floor is another convenience, as the work does not have to be completely laid away every time other duties of the housewife demand her attention. The difference between this and the other two plans is that the combined features, as contained in the last plan, make it distinctive, while in the others one or more of these are missing.

These plans have not been presented here with the idea that they include all points that go to make a model home. No person need agree with his neighbor on everything and the plans here represented are just samples of the ones that are now being received by the college authorities in answer to requests to a number of women for their opinions concerning the ideal home. There are slight mistakes in the above plans which ought to be avoided.

The interest these women have shown, however, is a splendid example of the change that Wisconsin farm homes are undergoing, and it will not be long before the conveniences for the wife will be considered on a par with the needs of the farmer.

Plan E: This plan, designed by a Rock county woman, has quite a few points of merit; the wash room for the farmer and his help, the spacious living room, the toilet and bathroom on the second floor, and the sleeping porch, which can accommodate part of the family when visitors come. The objections to this plan are almost as many as the advantages. However, comparing the location of the toilet and the wash room on the first floor and the location of the bathroom on the second, it is evident that there is bound to be a waste of material in plumbing. Horizontal plumbing should be avoided as much as possible and expenses cut down by having all piping as nearly vertical as possible. The toilet downstairs is not accessible except through the bedroom—another awkward feature. The bedroom downstairs can be turned into an office, but even so, there would be the disadvantage of being forced to pass through the dining room in order to get to it. In this, as in the other plans, you will have noticed that no one included a parlor in the sketch. That is because the parlor is nowadays rightly considered a useless institution and as having no place in the farm home.

Milk producers in the vicinity of Stoughton, Wisconsin, have organized and affiliated themselves with the Northwestern Milk Producers' Association, of Chicago. A delegate has been chosen to the Chicago federation.

THE NORTHWESTERN MUTUAL LIFE INSURANCE CO. MILWAUKEE, WIS.

GEO. C. MARKHAM, President

To the Public:

The 59th Annual Report of the President to the Trustees and other Policyholders of the Company shows the following transactions for the year 1916:

Death Claims Paid		**$15,515,133.26**
Endowments Paid		**4,839,065.81**
Dividends of Surplus Paid		**13,151,403.51**
Surrender Values Paid		**8,691,297.05**
Annuities		**245,188.64**
TOTAL PAYMENTS TO POLICYHOLDERS	**$42,442,088.27**	
Addition to Assets	**19,453,108.09**	
Grand Total for Benefit of Policyholders	**$61,895,196.36**	
New Insurance Paid For		**$153,272,632.00**

Total Insurance in Force, $1,505,464,984

FINANCIAL CONDITION JANUARY 1, 1917:

ASSETS		LIABILITIES	
Loans on Mortgages	$194,146,609.30	Legal Reserves	$328,977,009.00
Bonds (Market Value)	93,136,383.00	Present value of not due Installments	5,898,959.40
Loans on Policies	55,177,841.29	Claims, Taxes, Dividends Due, etc.	3,686,244.33
Real Estate	4,099,093.60	Annual Dividends of Surplus, Payable 1917	12,282,107.00
Cash	3,167,866.67	For Deferred Dividends	1,635,879.68
Miscellaneous	13,356,424.28	Contingency Reserve	10,604,018.73
Total	$363,084,218.14	Total	$363,084,218.14

Substantial increases over 1915 are shown in Death Claims, Endowments and Dividends paid, and in the item "Addition to Assets," thereby making a decided increase in "Grand Total for Benefit of Policyholders" * * * The new insurance paid for in 1916 was the largest in the history of the Company * * * Policy loans fell off appreciably and the amount of surrendered policies decreased materially, indicating a realization by policyholders of the real purpose of their insurance * * * There is still abundant room for growth. The gains of 1916 merely indicate future possibilities * * * A conservative forecast for the Northwestern warrants the conclusion that its liberal and flexible contracts, at lowest net cost, will insure its constant progress * * * The above figures are worthy of careful consideration.

Good Farm Homes Worth While

Running Successful Colt Show.

How It Was Done at Bloomington, Wisconsin—By M. F. Woodhouse Before Wisconsin Horse Breeders' Association.

AS A MATTER of fact, the success of our colt show was the result of co-operation—mixing. Ours is a stock-raising country. We have no factories except butter and cheese factories—and the business man and the farmer are interdependent and get together more freely than they do in larger places. The farmer boy weds the belle of the village and the business man's son plows corn for the farmer in vacation and astonishes his employer by marrying his daughter later on. You must not come to our town and say anything bad about anybody, for in all likelihood you may be talking to the slandered party's cousin or his brother-in-law. Under these conditions it is easy for us to get together and push. We have a large community club, composed of farmers and business men and when the colt show was suggested we got the club members together, talked the thing over, listened to suggestions—told stories, smoked, and altogether passed an extremely enjoyable evening—and came away with a firm resolve to boost the show and make it a winner. About ten days before the date set for it we sent out 600 strong letters to farmers in the tributary territory, emphasizing the importance of raising good horses, urging the entry of colts and inviting all to attend the show. The night before the show the Community Club held a reception, banquet and smoker at the Jones Tavern in honor of Meesrs. Houser and Baker, representing the Wisconsin Live Stock Breeders' Association. There were about fifty farmers and business men present at this function and I do not remember ever to have passed a more enjoyable evening. We found our distinguished guests congenial spirits and after the banquet we indulged in a round table discussion of the horse, which included his helpful promotion of the courtship of forty to fifty years ago as compared to the dare-devil exploits of those attempted in the automobiles and Fords of today—more often resulting in funerals than in weddings. Mr. Houser and the president of our club, Mr. Kitto, both of whom wear scars of honorable years, eloquently upheld the old-style, while the secretary of the club, who is a young man and an undertaker, insisted upon the superiority of modern methods. The good dinner, good cigars and good stories may not have helped any, but we are morally certain they didn't hurt any either.

About noon the next day the colts began to arrive. Horsemen of the village had provided ample stable room for them and the spirit of hospitality was everywhere in evidence. We have a good brass band and about 2 o'clock in the afternoon they made their appearance in full uniform, in honor of our guests, and patriotically did their full part in adding to the day's pleasure. The village was crowded with visitors—there were about twenty-five colts entered and many good farmers present said it was the best lot of colts they had ever seen together. Mr. Houser's judging gave excellent satisfaction and at the conclusion of the event we formed a parade—Mr. Houser and Mr. Baker in an open carriage, drawn by a span of fine Percheron mares—the band next, then the colts. It was an impressive spectacle and the hand clapping and cheers that marked the passage of the colts shows that the horse has not been supplanted by the auto in the affection of the people.

Our stallion men rose to the occasion handsomely. McKevitt Brothers, Tom McNamara, Harry Tornowske, Ora Jeidy, Charles Degenhardt, Harry Harville, Will Davis, Ed Govier, who own good horses, realized early in the game that their efforts for "more and better live stock" were appreciated and they all worked untiringly for the show. And when it was over victors and vanquished accepted victory and defeat without boasting or grumbling.

There is no division of opinion among our folks as to the value of a well-conducted colt show and we hope to have a better and larger one next year.

In closing I wish to state that Bloomington is a little village of 600 population, ten miles from a railroad. It has maintained a good fair for over fifty years. It has the faculty of sinking personal differences and uniting for the common good and this united effort is our Aladdin's lamp, bringing to us all the gratifications of success.

Milwaukee County Grain Show.

To the Editor:—Farm crops and poultry exhibits conducted by the Milwaukee County Experiment Association were held at the county agricultural school at Wauwatosa, January 12th and 13th. There was a good attendance in spite of the rather severe weather.

The afternoon of the 12th was taken up by talks by extension workers of the university. "The Value of the Milwaukee County Soil Survey" was discussed by Prof. W. J. Geig; "The Health of the Community" by Miss Elizabeth Kelley; "Poultry Diseases, Their Prevention and Cure" by J. B. Hayes, and "Wisconsin at the Panama Exposition" by Mrs. Adda F. Howie.

Saturday noon the members of the experiment association, their families and friends banqueted at the school dormitory. After dinner talks by E. S. Robbins, president of the Milwaukee County Milk and Cream Shippers' Association, and Mr. Perry, of the school faculty, were much enjoyed. The remainder of the afternoon was devoted to a business meeting of the experiment association.

The farm products exhibit, open to members of the association, showed plainly that the community can boast of some excellent farmers. The quality was high class and the liberal prizes offered made competition interesting.

The poultry show was, like last year, a great success. Practically all standard varieties were among the several hundred entries. Many of the birds having been winners at larger shows this winter gave unusual quality to the exhibit. The birds were scored by Mr. J. B. Hayes, of the University of Wisconsin.

Certainly much credit is due Prof. F. J. Sievers, superintendent of school, for his efforts in this home extension work. J. H. Dance.

Milwaukee Co., Wisconsin.

Every motor car rider has experienced the discomfort of dust in the eyes, and also from the effects of cold winds. A suggestion has been made that these discomforts may be greatly alleviated by applying castor oil along the eyelashes. This, it is claimed, will catch most of the dust before it can enter the eye, and also it protects the eyes from the chilling effects of the wind," says the Scientific American.

The Fond du Lac County Fish and Game Protective Association has declared itself in favor of a law aiming at the extermination of the common house cat in Wisconsin as the slayer of thousands of song birds and insect-eating birds annually. The state association has recommended such a law.

JOHN DEERE IMPLEMENTS

BOOK FREE 156 page reference book—tells all about a complete line of farm implements and how to adjust and use many of them. A practical encyclopedia of farm implements. Worth dollars.

Describes and illustrates Plows for Tractors; Walking and Riding Plows; Disc Plows; Cultivators; Spring Tooth and Spike Tooth Harrows; Disc Harrows; Alfalfa and Beet Tools; Farm and Mountain Wagons; Manure Spreaders; Inside Cup and Portable Grain Elevators; Corn Shellers; Hay Loaders; Stackers; Rakes; Mowers and Side Delivery Rakes; Hay Presses; Kaffir Headers; Grain Drills; Seeders; Grain and Corn Binders.

This book will be sent free to everyone stating what implements he is interested in and asking for Package No. X-64.

JOHN DEERE, MOLINE, ILL.

Van Brunt Broadcast Seeder and Cultivator

This is the oldest type of Van Brunt seeding machines.

The Van Brunt Broadcast Seeder and Cultivator handles any small grain.

Van Brunt adjustable gate force feed—even sowing always certain.

Independent tooth bars.

Teeth are soft-centered steel, tempered and guaranteed to scour. They are bolted in place and are reversible to double the wearing period. They can be adjusted to cultivate deep or shallow. Spring-trip is adjustable.

Sizes—12, 14, 16, 18, 22 and 24 bars, 6 inches apart.

The wood and iron construction has been replaced by steel and malleable iron. The famous Van Brunt adjustable gate force feed scatters every kind of small grain evenly on the soil without bunching, and the seed is covered by the cultivator teeth.

The tooth bars are equipped with spring-trip teeth. When the teeth strike an obstruction they spring back—are pulled over it—and then return to place.

John Deere Plows for Light Tractors

So far as quality of John Deere Plows for Light Tractors is concerned they are built for the farmer who realizes that it is business judgment to buy a high-grade tractor plow. Don't forget that a tractor plow is not an everyday purchase.

John Deere Plows for Light Tractors are noted for their high-grade work in the field—the real test of tractor plow value.

Before you make your purchase, be sure to see John Deere Plows for Light Tractors. A careful purchase means permanent saving.

High and Level Lift. Two, three and four bottoms.

High and level lift means level plows out of the ground, no cutting of ridges when crossing or turning on plowed ground.

Steady running furrow wheel—does not drag or bind against furrow wall.

Stiff hitch—plow can be backed.

John Deere bottoms, the standard for over 78 years. There is a John Deere bottom for every kind of soil.

Equipped with John Deere Quick Detachable Shares—great labor and time savers.

John Deere Model "B" Disc Harrow

Using a disc harrow before plowing pulverizes surface lumps; works trash into the seed bed and prevents the escape of moisture. Then when the furrow slice is turned, the trash decays rapidly and no large air spaces are left between bottom of furrow and the turned furrow slice. Water in the subsoil can make its way into the seed bed and plant roots can penetrate to deeper soils.

Discing after plowing removes the weeds, and makes the seed bed compact, but not hard. The discs break up lumps of soil.

The Model "B" pulverizes at even depth its entire width.

Patented spring pressure third lever—inner ends of gangs can be given light or heavy pressure to disc over ridges or cut out dead furrows without burying the harrow.

Independent gangs. All tendency of gangs to crowd to one side is easily overcome by giving them the proper relative angle.

Flexible—only that part of the Model "B" harrow passing over an obstruction is lifted out of the ground.

Rear section can be furnished to make a double action harrow.

Your Home Town Dealer

There is a big advantage in buying implements of your home-town dealer.

He gladly "backs up" the implements he sells, and he is on the ground to see that they make good. He makes his home in your locality—the place his goods are sold.

He handles a line of high-grade implements—and you can see before you buy. In the busy season, when work is pressing, he can furnish repairs promptly for the goods he sells.

If, by chance, he hasn't in stock just exactly the style of implement you want, he can give you quick service in getting it to you.

John Deere factory warehouses with immense storage rooms have been established in various sections of the country. Every John Deere dealer is conveniently located to one of these houses.

This, really, gives you two supplies of implements—the stock carried by your home-town dealer and that of the factory warehouse.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

Winter Work in Grapes.

A large part of the work which is essential for good results in grape growing may be done in winter—in fact, is best done in winter. Reference is made to the pruning—a matter of the very first importance. This work is sometimes done in early spring, but it is far better for the vines to do it when the sap is down.

The mistake usually made by the amateur grower is to leave too much wood. It is hard for him to rise to the heroic mood of cutting out two-thirds or three-fourths of the wood. It is hard for him to believe that nature in her extravagance will overdo her preparations, as to grow four times as much vine as she can use to advantage for fruit production. But such is the plain fact.

How and when to remove this superflous growth is always the problem. When the vines are young—say two years old—pruning is always simple. At the end of the second season's growth leave two main stems from the root, and two lateral branches from each root cane.

The amount of cutting at this stage depends upon how vigorous the vines are—and there will be a great difference in this respect, not only in vines, but in vines of the same variety.

If the laterals are long, shorten them into three feet. At all events, do not leave more wood than is needed to cover a three-wire trellis, giving each vine branch eight or ten inches of room.

After this trimming is complete—say in November—lay them down, upon the ground and cover with a few inches of earth. It would do to cover with straw or manure—but for the danger that mice will work in it and gnaw the vines.

But the serious problem in grape trimming is met when you take up the case of old, neglected vines, which are from four to ten years old. Of course, they should never have been left to get into that condition, but there they are—a great mass of wood—enough to break down any trellis. They will, in this condition, produce a little inferior fruit, but the result is pitiful when compared with what might have been. In such cases it is often best to adopt the renewal system. That is, to cut away the entire growth and let new shoots start up from the base of vine. This means, passing over one summer without hope of fruit. But it is better to do this, for by getting a right start you will get in coming years four times the grapes you can hope for in the unpruned condition.

The spring after the vine is cut off, you will be likely to get a great mass of new shoots. You should go over them in June and pinch away all but three or four of the stronger. Then, in November, cut out the weaker, leaving two or three of the best. These will likely be ten feet long or more. Cut back so that they just reach to the top of a four-wire trellis. The next spring start your lateral branches just as though the vines were young, and they will be in shape to produce heavy crops of fine, big bunches. The rule for vigorous growers like the Concord and Worden is to cut the new wood back to three buds. But with slow growers it is advisable to leave more wood.

If such vines are old, but still have had some attention in the past, such wholesale cutting may not be needed. But remove all but two main shoots, and if there are new ones near the roots save them by all means, removing an old stem to make room for them. Then cut the side branches according to the rule, the two or three laterals are sufficient, and follow up trimming by the three-bud rule. If the stems are so long that the new wood is too far out, so that the trellis will hardly hold it, take the half renewel system of cutting out half the old—leaving only one main stem, and getting new root shoots.

The following year cut the rest of the old wood. You will thus have no interruption in the crop, but secure some fruit each season. All of this cutting and trimming may be done any time in winter, but it is best to do it before February.

OUR MONEY-MAKING BERRIES

Reduce Your Living Expenses--Easy to Grow--Very Productive--Promote Good Health, Happiness and Prosperity

AMBROSIA—The earliest and best blackberry; large, sweet and very delicious.
KING OF CLIFFS—Best of black raspberries; bears all summer and fall.
EVERBEARING TREE—Largest, best and the most productive of the red raspberries.
STANDPAT—The largest and most productive of all the Everbearing strawberries.
MARVELOUS and CACO—Largest, sweetest and best flavored of all grapes.
OREGON CHAMPION and CARRIE—Best and most productive of all gooseberries.
PERFECTION and DIPLOMA—Best of all currants; sure croppers and reliable.

CATALOG FREE.

We will send one strong vine each of the above berries for $1. Post prepaid; regular price $1.65.

We have a large stock of all the above fruits, and all standard varieties of Strawberries, Raspberries, Blackberries, and all other small fruit plants, fruit trees, nut trees, budded varieties and everything for the fruit orchard or garden. Satisfaction guaranteed and prompt shipments.

ILLINOIS SEED & NURSERY CO., 233 MAIN ST., MAKANDA, ILLINOIS

Desirable Varieties of Evergreens For Windbreaks.

To the Editor:—Since the windbreak serves its most useful service in winter, trees of the evergreen type are most useful.

Generally the planter is in a hurry to get results. He can secure this feature as well as permanence by combining the quick growing and long-lived species.

Of the quick-growing kinds the Norway spruce and the Scotch pine are widely used in the corn belt. The Norway spruce is one of the easiest of evergreens to transplant. It possesses a spreading root system and a compact growth of branches.

Closely related to it is the white spruce. It is a smaller tree and the foliage is of a more silvery cast.

The Black Hills spruce is a variation of the white which is a native of the Black Hills country. It is hardier than other spruces and hence especially valuable in severe situations.

The Scotch pine is another quick grower. In this respect it excels the Norway spruce, but does not form as good a screen on account of its open growth. It is readily distinguished by the orange-colored bark on the upper portion of the trunk and branches.

For permanent effects the Austrian pine deserves special mention. In many ways it is the white oak of the evergreens. It is a slow grower, but a stayer. It possesses a main tap root instead of a spreading root system and hence is more difficult to transplant.

Under favorable conditions the white pine reaches the largest size of all the evergreens and lives to a ripe old age. It is more sensitive than those named and in severe locations may fail. When used it should be placed on the lea side. In this way it can be sheltered until well established.

The red cedar possesses many desirable qualities, but has the disadvantage of harboring the cedar apple fungus. Another stage of this fungus causes the apple rust. Often the apple trees adjoining a cedar row are completely defoliated and the fruit fails to mature. A. T. Ervin.

Method of Sowing Clover.

To the Editor:—For the benefit of others I will give my method of growing clover. I have no trouble getting it started, but of late years it has been so hot and dry after grain was cut that it would be killed in that way.

When we are getting the seed bed ready for small grain we prepare the ground well. Then we sow the grain and in the spring when the weather is warm enough so the clover will not kill by freezing we sow the seed when the nights are darkest in April, and did so this last year, putting one bushel of clover seed to about seven acres of ground. The weather being favorable, the yield was good and we cut twenty-eight big loads of hay from this ground and in the fall threshed two bushels of seed per acre. We sowed the seed among rye last year, but I think wheat or oats would be just as good. O. J. Saums.

According to government reports, live stock on American farms is worth 11 per cent more than it was a year ago—another good reason for raising more stock.

Build Your Bank Account With CORN

More profit in Corn than any other Crop—when you find the variety best suited for your locality. Others are harvesting 75 to 90 bushels per acre—so can you. Let Golden Jewel "the 100 bu. per acre Corn" prove this to you.

Send at once for our new illustrated catalog with full information on all Seed Grains, Seed Corn, Clover, Grasses, Garden and Flower Seeds. All sold direct from grower to planter—it's free.

Cow-Testing Reports.

Roberts and Little Falls Association.

To the Editor:—There were fifty-four cows in our association which produced forty pounds of butter fat or over during the month ending January 31st. J. L. Chapman's herd had the highest herd average, producing 38.6 pounds of fat per cow. The average cow production of the association was 673 pounds of milk and 26.13 pounds of fat. There were 334 cows tested in June.

The following table gives the names and records of the cows in the association which have produced forty-five pounds of butter fat or over for the thirty-one-day period ending January 31, 1917:

R. F. Adams, Official Tester.
Frank Smalley, Secretary.

In Shawano County.

To the Editor:—The Stratford Co-operative Cow-Testing Association has just completed six months of its second year's work and the results are very successful. During the past six months 2,117 cows were tested out of which thirty-seven were sentenced to the stockyards by the tester. By virtue of the cow-testing association work a better live stock movement is evident. Thirteen head of pure breds were purchased of which six were sires—one to replace a scrub bull; fifty-seven pure-bred Holsteins and the other two were pure-bred Guernseys. For the month of January, 1917, a pure-bred Guernsey owned by Wm. Schneider stands at the head of the list with a total production of 1,284.2 pounds of milk, or 59.1 pounds of fat. Nineteen cows in the association produced over thirty pounds of fat during the month. The highest herd average was that of Mrs. J. Hein. Fifteen cows in this herd produced an average of 27.72 pounds of fat.

The following table gives the names and records of the cows in the association which have produced forty-five pounds of butter fat or over for a period of thirty days ending January 31, 1917:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Out of the Old Barn---Into the New.

(Continued from page 1.)

country. This certainly illustrates very forcibly the progress which we are making along the line of barn building. The average farmer today would not consider that he was getting much if he would have a new barn built along the same lines as the old one shown in the illustration. The difference in the heights of the barns will be noted. The new barn resting on a foundation only slightly larger than that of the old, has much greater capacity in every department, especially for the storage of hay and grain. The new barn is equipped with modern stanchions for the cattle and litter carrier system, etc. Our readers may easily imagine how much more comfort the farm animals will have in the new barn and how much easier it will be to care for them.

Northern-Grown Seeds Are Popular.

ALL varieites of seeds have their champions, but from numerous reports those grown in our northern states are taking the lead. In some sections the opinion seems to be that northern-grown seeds are for use in the North only. This erroneous idea is, however, becoming less apparent every year. The exponents of northern-grown seeds make some sweeping claims and they have a large following not only in adjacent territories, but in many parts of the country where the climate and soil conditions are much varied. This does not mean, of course, that all seeds from the North country are necessarily of high quality. The same years of experience, careful cultivating, testing and experimenting are required to produce seeds that will give the highest percentage of germination—varieties with pedigrees, so to speak. Many reasons are given for this superiority of nothern-grown seeds, but the facts most important to the planters are that they have proven the superiority by large yields and quality production. One of the most widely known and oldest firm selling northern-grown seeds is the John A. Salzer Seed Company, Box 123, La Crosse, Wis. This company issues an annual free catalog that holds much valuable information for those interested in northern-grown seeds. See page 14.—Adv.

I MET HIM ON THIS VERY SHIP!

It was within an hour of sailing time. I was on my way home from Europe five years ago. The Mauretania lay beside her Liverpool wharf. Everybody was hurrying to get on, as we were to sail at five o'clock. Suddenly, without warning—without a propeller turning—she commenced to pull away from her moorings. The gang planks creaked—broke loose—and there was quite a commotion as the mighty Mauretania tore loose from her moorings and floated out into the water. In the excitement I met a man who was leaning over the rail who looked at me and we laughed together. Then we just naturally got acquainted like people do when they are traveling. He was J. J. Berrigan of Orange, New Jersey, the famous cream separator expert and inventor. I had never seen him before but I had heard of him. I told him I was from Waterloo, Iowa, and he said, "You are Galloway." I soon found out he was the great cream separator expert and a man I was glad to meet. Naturally

WE BECAME WELL ACQUAINTED

He told me what he had done in perfecting cream separator patents and improvements. I told him he was just the man I was glad to get acquainted with. After the Mauretania had been lashed to her wharf again, the excitement was over, and we pulled out of Liverpool several hours late—Berrigan and I began to talk cream separator, and every day after that we spent several hours together visiting. I told Mr. Berrigan that we were perfecting what I thought was the best cream separator ever produced, and I also told him if he would come to Waterloo and put on the finishing touches, go over the separator, test it, criticize it, find fault with it wherever he could, and suggest any possible improvements, I would pay him well for his time. In a few days after we landed in New York he did come to Waterloo. He said our separator was one of the finest designs he had ever seen, and with the few recommendations which he made, he pronounced it O. K.—good as the best—and better than many of the separators on the market today. Our engineers, designers and separator builders had produced a machine with graceful lines, simplicity of construction, combined all the good features and left out all the faults. Mr. Berrigan commended us on the work and immediately put his stamp of approval upon this machine. That's why I say

"Read this little story. It was my turning point as a manufacturer of cream separators."—Wm. Galloway.

WE PERFECTED THIS SEPARATOR

before we offered it on the market. We put out in the hands of farmers and dairymen enough of these separators to know that they would stand up under any test, whether operated and used in the kitchen, the milk house, the creamery or elsewhere, used two or more times per day, every day, week after week, month after month. **I just want you to try it.** If you like it, buy it. If you don't, send it back. **We pay freight both ways.** If the New Galloway Sanitary Separator is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is, I could not afford to make this **ninety day trial** offer and I could not afford to guarantee it for **ten years.**

Get My New LowPrices

AND READ MY 1917 BOOK ABOUT CREAM SEPARATORS

It tells of how we took four years to design and perfect this separator, to build into it every good cream separator feature and retain its beautiful proportions. How we did not build it down to a price, but built it up to a high standard in our own factories right here in Waterloo. It tells how we build Galloway Sanitary Separators from the ground up. How they are designed and many other separator secrets and facts. A meaty, exact, concise, truthful book about cream separators, gasoline engines, manure spreaders, tractors and other implements we manufacture. Why, by selling direct, I can make a machine as good or better than any high priced separator sold through other systems. These are a few of the reasons why I want you to get this book. It tells the whole story. It tells the truth. It tells the facts. Ask for it today. A postal gets it. Don't delay. A reading will save you dollars in buying.

Indisputable Proof!

Have operated several different kinds of separators. Galloway Sanitary skims as close and runs lighter than any. J. E. Ricketts, Paddensburg, Mo.

We know it skims close. It paid for itself. Wm. S. Brower, Farnum, Idaho. It is easier running and more easily cleaned than others. We made a saving of $23. I wouldn't exchange it for any high priced separator. E. F. Louthan, Carthage, Mo. Your No. 9 separates perfectly at rate of 800 lbs. per hour. (Only guaranteed for 750 lbs.) S. S. Brockway, Greenville, Pa.

Note these few strong, simple, sanitary parts. Easy to wash clean--no rough edges--no sharp corners. Bowl catches any foreign matter in the milk. Only two shafts in the whole gearing--both of high-carbon steel, in long, perfectly fitted bearings. All gear shaft and both bowl spindle bearings supported by one casting--the gear case. All the working parts run spray of oil. Simple, effective driving clutch on crank shaft.

Try a Galloway Sanitary Cream Separator In Your Dairy for Ninety Days.

Stand it side by side with cheaper machines and you will see the difference in material and workmanship, design and skimming qualities. Stand it beside the highest priced machines, test them together for months! Higher priced machines will not run any easier or skim any closer and cannot be more perfectly sanitary or better built. We want you to be the judge—we will take your decision as final. Separators shipped from Waterloo, Council Bluffs, Kansas City, St. Paul, or Chicago, whichever is nearest to you.

4 Good Sizes From 375 to 950 lbs. Capacity per Hr.

What Are Your Losses Through ABORTION

—in Calves?

—in Milk?

—in Injury to Cows and Heifers?

Here's Evidence that COW ABORTION Can Be Driven Out of a Herd

It covers nearly twenty years and fully bears out Dr. Roberts' claim that you, at very small cost, can wipe out this profit-stealing disease *if you will do as Dr. Roberts tells you to do.* Read these letters carefully.

1898 "My herd of twenty-two cows was afflicted with Infectious Abortion in 1898. After losing a number of calves I began treating them with DR. ROBERTS' ANTI-ABORTION TREATMENT. I feel that they were permanently cured, for I have not lost any calves since that time, five years ago."—(J. A. Griswold, Duplainville, Wis.) "My herd of cows, eleven in number, was troubled with Infectious Abortion. I tried various remedies, without any relief; then I began treating my herd with ROBERTS' ANTI-ABORTION. I had ten live, strong, healthy calves come that year and have not lost a calf since that time—over three years ago."—(Sworn statement of Herman Shirley, deceased, Waukesha, Wis.)

What is lost on ONE good calf would pay for the complete treatment for an average herd.

1902 "My herd of twenty-two cows being afflicted with Abortion in 1902, I decided to try DR. ROBERTS' ANTI-ABORTION TREATMENT, which I did with results satisfactory, and I believe if used according to directions is a sure cure every time."—(I. Vandeburg, Kingston, Ill.)

1913-15 "In 1913 I applied your ANTI-ABORTION TREATMENT to my herd of forty-two head, and hereby wish to state that I cured my herd entirely and that I haven't had a single case of abortion since that time."—(Jos. F. Jira, Cary Sta., Ill.) "I am well pleased with your TREATMENT FOR ABORTION. I have nine fine calves and one cow left to calve yet. Two of the calves are from cows that aborted last year. I finished your treatment July 15, 1915, two months ago, and have seen no signs of disease since then."—(Iowa. Name on request.)

If your herd is afflicted with Contagious Abortion, and is free from tuberculosis, you can, with the Dr. Roberts treatment, clean up your herd and wipe out abortion. All Abortion Treatments are shipped direct from our laboratories at Waukesha.

Individuality of Cows.

All cows are not by any means the same. There is the difference between gain and loss and then there is the inconceivable yield with its proportionate profit. There is the 28,000-pound cow with her extraordinary profit, the 2,000-pound cow with her loss and there is the 8,000-pound cow with her fair gain to her owner. Where is the difference? The poor or profitless cow is a cow, to be sure, but let us be thankful that this kind is growing fewer and fewer. On the other hand, take the cow with the ability to give 10,000 to 12,000 pounds of milk in a year and we have a cow that is a paying proposition and of a standard that is within the reach of every progressive dairyman.

Assume that we have a cow of the required "milk power." We must now learn the peculiarities of this machine as we would the peculiarities of any other one equally intricate and comply with them if we are to secure the best results. If gluten feed does not appeal to her appetite we should try some other feed, as dried distillers' grains, etc. We might have to feed her salt every day (as we should), or we might have to give her water before her grain or perhaps she would relish her grain sprinkled over her silage. Straw will often be eaten to good advantage if some molasses is mixed with water and poured over it. It always pays to encourage a cow, to "baby" her. It is she that is making the milk and she has complete control over it.

There is no doubt but that the propensity to give large quantities of milk is transmissible. There is no doubt but that the power to make and give milk can be increased and strengthened if the propensity be present. In athletics a good runner improves with training. In racing a horse must needs be trained to improve the gait and to increase the speed. A race horse is also fed and cared for that it may be speedy. Why, then, cannot a cow by proper feeding, training and care be made to do that for which she was born? And if this or any other characteristic is developed in the dam it stands to reason that she will the more likely transmit it to her offspring.

Individuality in a cow is evidenced by superior development in all her parts and the reappearance of these traits in her offspring. The prepotent animal imprints his individuality on his offspring with unmistakable exactness. Moreover the individuality of the owner is shown in the cows of his herd. If we see a herd that is well cared for and all of whose members bear resemblance to each other we conclude at once that the owner has an ideal cow in mind and that he is trying to build up his herd to a certain type.

Often we find a herd in which there is an old cow of superior merit and along with her we find perhaps three or four, or even more, all having the same characteristic. The old one is the dam, grandam, great-grandam, etc., of these and her characteristics have been handed down to her offspring. If one has an animal of noteworthy qualities it will pay him to keep her and attempt to get more like her from her. A herd that as a whole shows a herd individuality is one to be proud of if it is of a high grade.

The Freshening Period.

To the Editor:—"Conditions Determine the Freshening Period." The above was the heading of an article I read in a recent issue and it certainly was a true statement. I live in Marinette county, Wisconsin, right in the heart of a new dairy country. R. L. Pon, dairy husbandman, certainly knew what he was talking about when he said, "June is the worst of all times for a cow to come fresh." The weather will have begun to get hot, the flies will be bad, and the farmers will be too busy to give the cows the attention they deserve. It is the worst time of the whole year to raise a calf, and you have the greatest amount of cream and butter fat when it is cheapest. I have lived in Oklahoma, Illinois, Missouri and Wisconsin, and this is equally true of each of these states.

The little calf coming in June comes when the flies are bad and the mosquitoes, too. It is difficult to keep the feeding utensils sweet and clean. The calf is two months old before it is ready to eat much grass and by that time August is well along and the grass in the pasture is not so tender. The calf will not be very energetic about eating and will not keep fat unless other feed is given it. Then through the winter months it will be too young to do very well altogether on dry feed, and the cows will be falling off in their milk and not giving enough for the calves. All winter your calf will be eating expensive feed and very small returns will be visable.

From June 1st until October 1st is usually the time when butter fat brings the lowest price. If the cows freshen in October or November the price of butter fat is reaching its highest mark when the cows are doing their best work. Thus you see late fall or early winter freshening cows give best returns. Then the calves can be fed on fresh, warm milk till spring, with a little ground oats and good alfalfa or clover hay. In the spring turn them out on the fresh, tender pasture and watch them grow. When they are a year old they will be equally as good as the June calves are at a year old.

In June when the corn is to be plowed and the garden tended, the harvest and the hay coming on and the shipment of hogs for the June market, the farmer is very busy. The farmer's wife, too, has her chickens to care for and the canning season is on. June is a very busy time.

Farmers do not always have a family of children who ought to be attending school. There are more than twenty-five families of new settlers here in our district and almost every family is trying to build up a good dairy herd. More than half these families have no children of school age. Some, like my husband and myself, are trying this work alone, our own children having all gone to homes of their own.

We like our cows to freshen in the fall or early winter, for that is the time to harvest the cream checks, and the bossy calf won't know the difference, for she will have her warm milk in the barn all winter.

I am sorry about the boy's cold feet, and I am a little afraid he has cold feet yet. I hope he will plant carrots and beets in place of pumpkins and avoid the seed proposition. They make better yields per acre and are excellent for milk cows. That is what we raise here.

You see conditions determine that the freshening period for dairy cows should be in the late fall or early winter months. Mrs. Lucy L. Ferguson.

Marinette Co., Wisconsin.

Dealing With Frozen Cow's Teats.

To the Editor:—In treating frozen cow's teats the first thing to do is to spread on cream of camphor very often until the milk duct commences to close. Then apply a small bandage. But the bandage must not be applied while the camphor is used, or it will blister. Sanolin ointment is the best in this case. The bandage and ointment must be renewed at every milking. The bandage must be kept on the teat until entirely healed. The thing to remember is that the cure is effected by preventing a scab forming on the wound, and the little bandage, if properly applied, will do it. Miss G. Gjermundsen.

Dane Co., Wisconsin.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word each insertion.

Feeding Young Dairy Calves

Feeding the calf should begin before it is born, says Farmers' Bulletin 777, Feeding and Management of Dairy Calves and Young Dairy Stock, recently issued by the U. S. Department of Agriculture. Poorly nourished cows give birth to weak, puny calves which are hard to raise. Cows which have an abundance of palatable and succulent feed and are in good body flesh and healthy, thrifty condition at calving time are more likely to produce well-developed, strong and sturdy calves, which will respond normally to proper feed and care.

The calf should always receive its mother's milk at first, as the colostrum, or first milk, stimulates the calf's stomach and other digestive organs to action. Most dairymen prefer to keep the calf with the cow for about forty-eight hours immediately after birth. It may be best to allow a weak calf, or one that does not gain strength readily, to remain a longer time, but it is sometimes difficult to teach the calf to drink after sucking the cow for a time, and serious trouble may result from its failure to obtain food.

Successful raising of calves requires absolute cleanliness. Calf pens should always be kept clean and be supplied with plenty of dry bedding. Discarded feed should be removed from the feed boxes, which should be thoroughly brushed and cleaned each day. All milk fed should be fresh and clean, which is true also of other feeds. Milk pails should be scalded thoroughly with boiling water, or sterilized with steam if possible.

Milk from cows having a communicable disease, as tuberculosis, should be pasteurized (heated to 145° F. and held at that temperature for thirty minutes) before it is fed to calves. Separated milk from a creamery also should be pasteurized, because it is practically impossible to know that such milk is free from infection.

Better results are obtained by feeding young calves three times a day, with the periods between feeding as nearly equal as possible. When fed in this way the calf does not overload its stomach, and the digestion of the feed is more evenly distributed throughout the twenty-four hours. Regularity in feeding is important. When calves are fed but twice a day, the feeding should be as nearly as possible twelve hours apart.

At birth a fifty-pound calf should have about eight pounds of whole milk a day, while a 100-pound one should have about twelve pounds. For the first four days milk from the dam should be fed, then that from any of the other cows in the herds, preferably not from any that are nearly dry. Milk containing not more than 4 per cent butter fat is considered best.

At the beginning of the third week either skim or separated milk may be substituted for whole milk at the rate of one pound a day. The daily ration may be increased from two to four pounds, depending upon the vigor of the calf. When the calf does not drink eagerly what is offered, the quantity should be cut down. The ration at the end of the third week usually should be approximately one-half whole and one-half separated milk. During the fourth week the change should be continued until, by the end of the week, only separated milk is fed, unless the calf is very delicate. With especially vigorous calves the change to separated milk can be made about a week earlier. The quantity fed can be increased gradually from eighteen to twenty pounds a day.

Six months is probably a good average age at which to wean calves from milk. The age depends upon the cost of the milk in relation to the value of the calf, its breed, size, vigor, etc. The season of the year and the other feeds available also must be considered. When the best of hay, silage and a good variety of grains are available, or when good, succulent pasturage can be provided, the calf can be weaned earlier; also the stronger and more vigorous the calf the earlier it can be weaned. On the other hand, the more valuable the calf the more expense the owner is warranted in developing it, and the later it will probably be weaned. If skim or separated milk is plentiful, calves may be fed profitably until eight or ten months old.

When the calf is in its second week it should begin to receive grain, and when one month old it should eat about half a pound a day. After this time the quantity of grain may be gradually increased, feeding all that the calf will eat until three pounds a day is reached, probably during the third month. Grain fed to supplement separated milk should never be mixed with the milk. It is questionable whether the preparation of grain in any way, such as soaking or boiling, is available under most circumstances.

Wheat bran is eaten readily by young calves. Corn has an excellent physiological effect and to a great extent may take the place of fat removed from skim or separated milk. Experiments tend to show that corn fed to calves should be cracked rather than finely ground. Ground oats are good in grain mixtures when available, but in many cases cost much more per unit of feed than corn and bran. The following grain mixtures are recommended in the bulletin:

(1) Three parts cracked corn and one part wheat bran.
(2) Three parts cracked corn, one part wheat bran, and one part ground oats.
(3) Three parts cracked corn, one part wheat bran, one part ground oats and one part linseed meal.
(4) Five parts cracked corn, one part wheat bran, one part ground oats and one part blood meal.
(5) Oats, ground.

Clover hay, alfalfa hay, or the most palatable roughage available, should be given the calf after the second week. Alfalfa is liable to cause scours, and should be fed sparingly at first and increased only after the calf gets accustomed to it. At first, hay should be furnished only a handful at a time and be placed so that it cannot be soiled. For the first six months, at least, the calf should receive all the roughage of good quality that it will eat up clean. When the calf has access to good pasture during the first six months, it need not receive other roughage. It is not advisable, however, to have the calf under two months of age on pasture in the early spring.

Wisconsin Ayrshire Meeting.

To the Editor:—The annual meeting of the Wisconsin Breeders' Association was held in connection with the Wisconsin Farmers' Week at Madison, Wisconsin, February 8th.

J. A. Watson, field man for the national association, was the speaker and delivered an illustrated talk on the Ayrshire and its future. He illustrated the old and modern type of Ayrshire cattle by means of lantern slides which brought out the strong features of the Ayrshire breed, namely, constitution, capacity, conformation, production.

Wisconsin is rapidly developing as an Ayrshire state, there being now 200 breeders within the state.

James Van Etta, of Lima, Wisconsin, was appointed president for the coming year and A. J. McNab, of Whitewater, was appointed secretary and treasurer. C. M. Winslow.

Ensilage Not Wet Enough.

To the Editor:—I think I can answer the question asked by Walter D. Krahm, who wanted to know the cause of green, moldy spots in his silo. I had the same thing in my silo once and it was caused from not being wet enough when the silo was filled. It did not have moisture enough to overcome the heat and dried out in spots and burned. I fed mine to the cattle and they ate it all right and I got no bad results therefrom.

I have had a silo for several years. I filled ten silos this year or last fall, rather. I cannot praise the silo too much, as it is the best paying proposition on the farm for the money invested. I would not think of farming without a silo. Most people do not put in water enough when filling. If the corn is not green I advocate plenty of water. J. W. Shields.

Tom Dale, of Amherst, recently took a load of potatoes to town and sold them to the co-operative society, receiving a check for $304. This is certainly some receipts for a load of potatoes. The price paid was $1.52 per bushel. Even that is cheap compared to what potatoes retail at in the cities. On the 15th of February potatoes were selling at $3 per bushel or higher in a number of grain-belt cities.

To Protect them from Tuberculosis

WHAT farmer wouldn't give 4 cents a day for one year to protect his stock from this dangerous disease for all time? This small sum for each animal in the barn quickly pays the cost of a King System of Ventilation. And no one can suggest better protection from tuberculosis than fresh air. Write for our new book on barn ventilation and let us tell you about the service back of the

KING SYSTEM OF VENTILATION

Planned for the Building It Goes Into

It costs less money to install a King System than to try to get the same results in any other way. We have eliminated guess work from planning the system—and we are equipped to supply the material for the system at lowest cost. In other words, we can give you more for your money and in addition *guarantee* the results after it is installed.

GET THIS BOOK

You can install a King System in any barn, new or old. The King Aerators are the first units of the system. They can be installed with or without the complete system. Write for our new book on barn ventilation.

KING VENTILATING CO.
1144 Cedar St., Owatonna, Minn.

Good Barn Ventilation Starts with the King Plan.

Let the Silo Buy the Auto

If your problem is to decide between the silo and the auto, better get the silo first. The silo will help to buy the auto; but you can never make the auto buy the silo.

A Natco glazed hollow tile silo will add 40% to the value of your corn crop. Results—bigger cream or milk checks and reduced feed bills. Build a

Natco Imperishable Silo

"The Silo That Lasts for Generations"

Stoutly reinforced with steel bands laid in mortar. Simple in design; only two shapes of tile used; any mason can erect a Natco. Wind-proof, decay-proof, fireproof and frost-resisting. Needs no painting—has no hoops to tighten. Used and endorsed by leading Experiment Stations. *Fully guaranteed.* Will greatly increase the cash value of your farm.

Natco Silo Wall: Note *perforated* shell providing firm anchorage for mortar joints

Send for our Silo Catalog—also our book, "Natco on the Farm," describing all kinds of farm buildings built with Natco Hollow Tile. Tell us what you're going to build. We have many farm building plans to submit, and will help you solve your building problems, free. Write today.

NEWS OF THE SALE RING

Grant County Poland China Sale.

Peculiar conditions sometimes surround an auction sale, that cannot be accounted for. This was true at Lancaster, Wis., when an offering of Polands were sold far below their value. The best 15 gilts that we have seen enter a sale ring were sold at about half their value. The local farmers were in attendance, but did not give the hogs the support they were entitled to. Grant county is one of the best agricultural counties in the state and there are some good cattle and hogs in the county and with the exception of a few, the breeders are "dead ones." The Poland men have tried to stimulate more interest in better swine, but they can't get results without the co-operation of the better farmers of that county. We know that the breeders took less money for many of the gilts than they could have received at private sale. This was a sacrifice on their part. The combination sale at Madison, averaged $81.50, the combination sale at Lancaster averaged $57.50 and the hogs in Grant county had the best offering, but the men at Madison know hogs and appreciate their value. Those that made selections at Lancaster will sure make money. Breeders of Grant county wake up and take advantage of the opportunity that is before you. It's up to you to put your county on the map. We follow with a complete list of buyers and prices:

No. 1, Bryant Bros., Hazel Green, Wis., $87.50; 2, Lee Eastman, Lancaster, Wis., $52.50; 3, Frank Renalde, Lancaster, Wis., $55; 4, H. Vesperman, Lancaster, Wis., $40; 5, E. Rice, Platteville, Wis., $47.50; 6, L. Wilkinson, Lancaster, Wis., $42.50; 7, A. G. Peterson, Lancaster, Wis., $50; 8, A. L. Gray, Mt. Hope, Wis., $62.50; 10, Geo. Flesch, Lancaster, Wis., $47.50; 11, C. Shanley, Lancaster, Wis., $45; 12, Hauk Bros., Cassville, Wis., $47.50; 13, C. Shanley, $55; 14, Frank Morehouse, Lancaster, Wis., $67.50; 15, Guy Walker, Lancaster, Wis., $67.50; 16, I. Vesterman, Lancaster, Wis., $57.50; 17, Frank Bidwell, Lancaster, Wis., $70; 19, M. F. Walker, Lancaster, Wis., $52.50; 20, A. Woepkin, Lancaster, Wis., $57.50; 23, Albert Henry, Lancaster, Wis., $70; 24, I. Vesperman, $47.50; 25, Hauk Bros., $60; 26, A. Woepkin, $42.50; 27, Hauk Bros., $55; 28, P. W. Young, Prosper, Minn., $62.50; 29, I. Vesperman, $57.50; 30, Chris Kartman, Cassville, Wis., $70; 32, E. Rice, $52.50; 33, Fred Bendorpf, Lancaster, Wis., $52.50; 34, I. Vesperman, $52.50; 35, Thos. Holmes, Lancaster, Wis., $60; 36, Lee Eastman, $55; 37, Ben Goke, Platteville, Wis., $47.50; 38, J. C. Mathews, Marion, Wis., $57.50; 39, Guy Walker, $60; 40, Frank Renalde, $57.50; 41, Chas. Flesch, Mt. Ida, Wis., $62.50; 42, E. Cairns, Mt. Hope, Wis., $67.50; 43, L. Highland, Union Center, Wis., $42.50; 44, Ben Gole, $52.50; 45, T. C. Everett, Columbus, Wis., $60.

E. W. Hendricks' Poland China Sale.

The second Poland China sow sale of E. W. Hendricks, was a success in every respect. The day was a little disagreeable, but the breeders and local farmers were "on the job" to buy the good ones. The neighbors of Hendricks appreciate what they are producing and were contending bidders on the best sows. As usual Ed had the offering in fine condition. The demand was for sows sired by Black Jumbo and bred to Model Major 2d. It was a nice, clean sale in every respect and was one of the good sales of the season. The average of $84.50 was considered very satisfactory in view of the fact that many of the sows were bred too late for the breeders. We follow with a complete list of buyers and prices: No. 2, T. R. Loeper, Rosedale, Wis., $97.50; 3, A. H. Hendricks, Hazel Green, Wis., $90; 4, Chas. Harris, Georgetown, Wis., $75; 5, B. McNulty, Cobb, Wis., $85; 6, J. C. Bumgardner, Stockton, Ill., $67.50; 7, L. N. Bunt, Platteville, Wis., $82.50; 8, A. H. Hendricks, $62.50; 9, J. H. Kreger, Lost Nation, Ia., $60; 11, Peter Meloy, Townsend, Mont., $110; 12, D. Danks, Stoughton, Wis., $100; 13, Thos. C. Johnson, Reynolds, Ill., $100; 14, Olaf C. Olson, Strum, Wis., $90; 15, T. R. Loeper, $137.50; 16, J. D. McDonald, North Bend, Wis., $65; 17, D. Danks, $155; 18, J. C. Hendricks, Hazel Green, Wis.,

(Concluded on page 20.)

BARRED Plymouth Rocks and eggs. Farm raised; bred for beauty and utility. Cockerels $3 to $7; pullets $2 to $4. Double mating, state if dark, light, or medium birds are wanted. Carter's Plymouth Rock Farm, Jonesdale, Wis.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Getting Started in Show Class.

To the Editor:—After having bred mongrels for a number of years, I decided to invest in thoroughbred poultry. In the spring of 1908 I bought from a local breeder of S. C. Rhode Island Reds five pullets and one cockerel, four months of age, paying $8 for the six birds. These grew to maturity and the following season I bred and raised from them about fifty youngsters. In the fall of 1909, having developed a greater interest in poultry, I decided to visit a poultry show so that I might figure out how my birds compared with those on exhibition, and it did not take me long to discover that my birds were culls when compared with those I saw at the show. The following March, 1910, I sold nearly all the birds that I had on hand for $24 and bought from a good, honest Red breeder a $5 setting of eggs. From the chicks I hatched from these eggs I raised two cockerels and four pullets and the following fall I wanted to exhibit the birds at the local show, but I did not. My nerve failed me, I think. Anyway I had the courage to ask two breeders who had bred and exhibited birds for a number of years to come down and take a look at these six birds. After looking them over they were quite excited about one of the cockerels, paying him all kinds of compliments and said that a bird of his class would cost a good many dollars from any of the big breeders. I have never been able to tell those men what they did for me, but of this I am sure, they instilled more enthusiasm in me over the birds than in anything I have ever known.

In January, 1911, out of the six birds I had on hand I discarded one cockerel and one of the pullets on account of white ear lobes, and bred from the best cockerel and three pullets. I made a close study of my birds and the eggs laid by them and soon learned to distinguish the eggs laid by these three pullets and set them separately. When the chicks from these eggs hatched I toe marked them, that I might make no mistake in selecting the next year's breeders. From the four birds I hatched and reared 100 youngsters and I fed the chicks chick foods and a corn meal mash and quite a few beef scraps. I never saw chicks grow better or develop more uniformly. By fall, having watched their gradual development of beauty in form and feather, through the summer, I had gotten my nerve worked up to the point of entering them for exhibition at the fall show. A month and one-half before this time I picked out seven birds that I intended for exhibition and these I put in training coops and started to get them trained and in condition. I weighed every bird and those under weight I put on a fattening diet, also gave them a lesson every day in posing. Some of them took to posing like ducks to water—others were a little wild at first, but before long I had them all so they would pose nicely. There was one cockerel in particular that was an extraordinary good one, except that he was a half pound under the standard weight and his comb was undeveloped. This bird I kept on a special diet and gave him the best of care. This bird weighed eight pounds when I put him in the show room and won first in a class of twelve cockerels. These birds went into the show room in tip-top shape and in a class that was the largest in the show, six exhibitors, three from our local town and three from the state at large, making an entry of sixty-four S. C. Reds, I won as follows: First cockerel; first hen; first, second, third and fourth pullet and first hen. I also won $5 for best hen in show. I also won two silver cups and a number of other specials. The two judges who judged our show claimed that my first pullet was as good as they ever saw and Judge Hackett, who was visiting our show and who had judged shows such as Chicago and many other shows, said this pullet was good enough to win in most any show that he ever judged. However, for a beginner, I think I did wonderfully well and am perfectly satisfied. In summing up I would say that I attribute my success first to buying eggs of thoroughbred stock, second to the excellent points and reminders which I received from the poultry magazines, and, third, from attending strictly to little details of the business. My birds never fail to bring home ribbons for me and I can say I have as good a flock throughout as anyone in the state. After one gets a good start he does not often keep buying birds, as many a big breeder does today. I must say one thing, in dealing with your customers treat them as you would want them to treat you. If there are any questions I can answer for a beginner on the subject of Rhode Island Reds, I would be glad to answer them. L. McCarter.

Outagamie Co., Wisconsin.

"The meat value of the quail is inconsiderable—negligible—when compared to the services these birds render to the farm," a bird expert of the University of Oklahoma says. "They prey upon 145 different kinds of destructive insects and consume no less than 129 varieties of noxious weed seeds. They stay on the job twelve months in the year and labor continually when weather conditions permit. I do not believe that the landowners should permit a multitude of so-called sportsmen to destroy this powerful ally of the farmer."

A New Industry.

DURING last year over 1,000,000 automobiles were put into actual service and approximately 4,000,000 of them are operating every day. This enormouse increase in number of machines has led to the establishment of automobile schools here and there, where young men are trained to know everything from A to Z about automobiles. At the Michigan State Auto School, one of the best in existence today, the course takes from ten to twelve weeks for the average student and the cost is very reasonable. This school has proved a great success, both for students and factory owners, because it enables them to get men for their employ who are thoroughly trained and can handle any automobile proposition. Special attention is paid to electrical equipment outfits at the Michigan School because the large per cent of automobile difficulties are in some part of the electrical equipment. The Michigan State Auto School is located in Detroit. It has an enrollment of from 700 to 1,000 men, all of whom receive personal instruction.—Adv.

Ironclad TRADE MARK
Wins in the Two BIGGEST HATCHING Contests Ever Held
Why take chances with untried machines when for only $11 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an IRONCLAD—the incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With the Ironclad—the same machine we offer with Brooder freight, paid for only $11, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.

150 EGG ironclads are not covered with cheap, thin metal and painted like some do, to cover up poor quality of material. Ironclads are shipped in the natural color—you can see exactly what you are getting. Don't class this galvanized iron covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of.
Galvanized Iron, Asbestos, Redwood, Insulated Board
10-Year Guarantee
Both for $11 Freight Paid East of Rockies
30 Days Free Trial
Money Back if not Satisfied
MADE OF CALIFORNIA REDWOOD
150 Chick Brooder
Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery—hot water top heat, copper tanks and boilers, self regulator, Tycos Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write TODAY or order direct from this advertisement.
IRONCLAD INCUBATOR COMPANY, Box 113, Racine, Wis.

Summary: 36 head brought $2,705; average $84.50.

J. C. Hendricks' Poland China Sale.

J. C. Hendricks held his second sale of Poland China sows February 15th, resulting in an average of $88.50 on the 42 head sold. It was a grand sale in every respect. Joe gave the buyers a good lot of sows to bid on and they spent their money freely. The sows were not overdone in any way, but were in nice sale condition and there is no reason why they should not go on and do well for their buyers. Henry Kettler was a buyer of some of the good gilts. J. D. McDonald made what we think the best buy of the sale when he bought No. 11, an outstanding yearling at $100. The yearlings and tried sows did not bring their real worth. Mr. Hendricks is to be congratulated on his ability to produce an offering that can again break the state record for Poland China sold at auction. We follow with a complete report: No. 1, T. R. Loeper, Rosedale, Wis., $95; 2, Fred Sutter, Fountain City, Wis., $65; 3, J. D. McDonald, North Bend, Wis., $107.50; 4, J. D. McDonald, $87.50; 5, Bryant Bros., Hazel Green, Wis., $72.50; 6, J. F. Eastwood, South Wayne, Wis., $87.50; 41, Henry Kettler, $87.50; 42, Wm. Hoadley, $75; 43, R. J. Broner, Cresca, Ia., $150. Summary: 42 head sold for $3,717.50; average $88.50.

P. W. Young's Poland China Sale.

The best Poland China sale in the north this winter was made by P. W. Young, Prosper, Minnesota, when he sold 41 head of bred sows at an average of $98.14. This was another demonstration of what good boars will do for a breeder. It is generally conceded that Mr. Young has three of the best herd boars in existence and the breeders stamped their approval when they bid so liberally on their produce. Young's Big Joe is the latest attraction and sows bred to him were in greatest demand. He is a great young boar and those having litters by him this spring will be fortunate. Sows bred to him averaged $107. Master's Giant sows bred to Orange Wonder averaged $95. This was a postponed sale and even then the trains from the south and west were still blocked, which interfered with the sale. Had the roads been good and the weather more pleasant we feel certain that the average would have been over the $100 mark. Over 175 people were fed at noon and some 400 attended the sale. H. O. Tellier made many friends by the manner in which he conducted this good sale. We follow with a complete list of buyers and prices:

No. 1, Wm. Wrigley, Lake Geneva, Wis., $275; 3, Harry E. Ruffridge, Greene, Iowa, $130; 4, Taylor Graham, Prosper, Minn., $130; 5, A. J. Anderson, Houston, Minn., $130; 6, W. T. Wiger, Mabel, Minn., $105; 7, Byron Willford, Canton, Minn., $90; 8, Joseph Thompson, Mabel Minn., $77.50; 9, P. T. Ramlo, Decorah, Iowa, $90; 10, Martin Walhus, Mabel, Minn., $100; 11, W. W. Quackenbush, Melrose, Wis., $110; 12, Oscar Gallentine, Farnhamville, Iowa, $145; 13, E. G. Stensland, Mabel, Minn., $110; 15, P. A. Wold, Newhouse, Minn., $80; 16, C F. Gummert, Renville, Minn., $100; 17, Conrad Ryan, Canton, Minn., $75; 18, J. J. Taylor, Lime Springs, Iowa, $90; 19, P. T. Ramlo, $110; 20, Andrew Elstad, Whalen, Minn., $76; 21, Wm. Poppe, Caledonia, Minn., $85; 22, M. W. Ahern, Lanesboro, Minn., $100; 23, W. P. Donald, Prosper, Minn., $100; 24, John Fitting, Houston, Minn., $88; 25, Leon Tompkins, Byron, Minn., $86; 26, N. Richert, Mabel, Minn., $68; 27, C. S. Flesch, Fennimore, Wis., $75; 28, W. T. Wiger, $68; 29, Joseph Thompson, $51; 30, E. W. Hendricks, Hazel Green, Wis., $102; 31, Alfred Magnus, Ridgeway, Ia., $84; 32, Albert Van Wychen, Faribault, Minn., $88; 33, J. M. Glazier, St. James, Minn., $135; 35, R. G. Sandager, Calmar, Iowa, $71; 36, O. K. Romberg, Calmar, Iowa, $95; 37, P T. Ramlo, $106; 38, Wm. Poppe, Caledonia, Minn., $90; 39, Ed Rossez, Faribault, Minn., $85; 40, Alfred Magnus, $86; 41, Tulloch & Freis, Genoa, Wis., $75; 43, A. H. Bergsrud, Spring Grove, Minn., $65; 44, O. J. Arneson, Spring Grove, Minn., $110.

Kartman's Poland China Sale.

Chris. Kartman sold 35 head of cataloged Poland China sows and a few extras at Cassville, Wis., February 16th. There was a large crowd in attendance, many local farmers, of course, at the same time a dozen or more breeders were present. Mr. Kartman had a nice lot of qualitied stuff, but they had not been pushed enough to command high prices. Several good spring gilts and some fall yearlings were sold at good prices. Mr. Boughton, of Bayfield, Wis., bought a good yearling daughter of Big Orange for $80 that was a good buy. R. Meinking, Bangor, bought the top gilt at $72.50—she was the outstanding gilt of the sale. Frank Renalde bought an April gilt for $55 that was one of the bargains of the sale. It is a centainty that the buyers will make money on the cows purchased in this sale. W. H. Cooper sold the offering in an efficient manner. We follow with a list of those selling for $35 and over:

No. 1, L. Okey, Cassville, Wis., $45; 2, S. L. Boughton, Bayfield, Wis., $80; 3, A. H. Patch, Bloomington, Wis., $45; 4, Hauk Bros., Cassville, Wis., $65; 5, Deimer Bros., Cassville, Wis., $57.50; 6, Wm. Hauk, Cassville, Wis., $67.50; 7, Mat Pins, Turkey River, Ia., $52.50; 8, F. Kolker, Turkey River, Ia., $40; 10, S. L. Boughton, $65; 11, R. Meinking, Bangor, Wis., $72.50; 12, S. L. Boughton, $55; 13, Thos. Rech, Cassville, Wis., $40; 14, A. Udelhofen, Cassville, Wis., $36; 17, E. C. Caverly, Toulon, Ill., $50; 18, Jas. Perrin, $37.50; 20, John Becker, Turkey River, Ia., $40; 21, J. J. Ryan, Glen Haven, Wis., $40; 22, Mat Pins, $52.50; 24, Geo. F. Harris, Bagley, Wis., $40; 26, Frank Renalde, Lancaster, Wis., $55; 27, Jas. Perrin, Potosi, Wis., $37.50; 28, A. Udelhofen, $35; 29, Frank Kolter, $35; 31, Mat Pins, $42.50; 34, Wm. Zenz, Potosi, Wis., $42.50; 35, Wm. Zenz, $47.50; 36, Neimer Bros., $40; 37, A. Udelhofen, $35; 38, Thos. Baldwin, Elgin, Ia., $37.50; 39, Max Kischbaum, Cassville, Wis., $40; 25, J. J. Ryan, $38; 33, A. Udelhofen, $36; 23, A. Udelhofen, $36. Total $1,617; average $46.20.

140 Holsteins Sell at Monroe March 6th and 7th.

ONE of the Holstein events of the season will be a dispersion sale of 140 head of Holstein cattle at Monroe, Green county, Wis., March 6th and 7th. Daughters of some of the most noted bulls of the breed are included in this sale, for instance a real choice daughter of King Segis; daughters of King of the Pontiacs, Aaggie Kornucopia Johanna Lad, De Kol's 2d Butter Boy 3d. These are safe in calf to a 33-pound or a 37-pound bull. There will be 20 daughters of Mutual Fobes Piebe, full brother to the 34.69 junior four year old, Bessie Fobes Jessie Homestead; 20 daughters of King Pieter Pontiac Korndyke, he out of a daughter of Dutchland Sir Pontiac Rag Apple, full brother to the first 37-pound cow. There will be fifteen daughters of Johanna McKinley Copia, whose two nearest dams average over 33 pounds. He is a grandson of King Segis, that in turn is a grandsire of Segis Fayne Johanna, the only cow that ever produced 50 pounds of butter in seven days. They are bred to a son of Vale Mercedes Lady 37.46 pounds of butter in seven days; 110 pounds milk in one day. After reading this short description you can at once appreciate the wonderful breeding wrapped up in this herd of cattle, and, as the animals individually are consistent with their breeding you will make no mistake attending this sale. It is generally conceded that the opportune time and place to buy Holsteins is at a dispersion sale. Here is your opportunity. Remember the date and place and write to Mrs. Mary Legler, executrix of the Legler Estate Herd, or to Holstein Sales Company, Elgin, Ill., for one of the illustrated catalogs. All cattle have been tubercular tested by Wisconsin veterinarians. See page 28.—Adv.

Hereford Opportunity.

WE HAVE just located a Hereford herd in Wisconsin that is in keeping with the good herds of the country. This herd is owned by Walter Bros., Chippewa Falls, Wisconsin, and is made up of a herd of breeding cows that would appeal to anyone interested in this breed of beef cattle. Few Hereford bulls are being offered for sale at the present time and here is an opportunity for a prospective buyer to buy a bull of serviceable age bred along the most popular lines known to the breed. One outstanding two-year-old bull is for sale and two senior yearlings. The yearlings are sired by Beau Gomez 2d, he by Beau Gomez, and those posted are acquainted with the fact that the last mentioned bull sold for about $4,000 and was the sire of many show yard winners. We are glad to recommend these bulls and we feel confident that they will be satisfactory. Write at once for further description, as mentioned above good Hereford bulls are in demand and these will not be on the market long. Please mention this publication. See page 28.—Adv.

McDonald Leads Again.

J. D. McDONALD, the popular Poland China breeder of North Bend, Wis., again demonstrated the fact that he breeds "sale toppers," for an entry from the McDonald herd topped the association sale at Madison, February 7th. J. D. is offering some wonderful gilts at this time and if you need a few good Polands let him describe what he has and the boars that they are bred to. Better Poland Chinas than those owned by McDonald are scarce. Don't forget to mention The Wisconsin Farmer when writing for information. See page 29. —Adv.

Kerosene or Gasoline?

THE attention now given to kerosene engines for farm use is increasing every day by readers of this paper, because of the high price of gasoline. It is seen that the original cost of an engine is not the only expense to consider, but that the cost of the fuel to run the engine is one of the most important outlets when considering farm power of any nature. As fuel, kerosene has the advantage over practically every other fuel for a farm engine. Some years have been required to perfect an engine which would successfully use kerosene, but a number of our readers are using kerosene engines and pronounce them a success. The Ottawa Manufacturing, 1191 King St., Ottawa, Kan., have given the kerosene proposition a thorough try-out for several years, with the result that they are now selling a kerosene engine which they claim is entirely satisfactory. Their literature will explain the features of their engine in detail and give you all other information necessary regarding their line of engines which range in size from two to 22 horse power. Write to the Ottawa Manufacturing Company, 1191 King St., Ottawa, Kansas, if at all interested in a kerosene engine. See page 6.—Adv.

Jerseys at Auction.

ON March 7th at Werley, Wis., R. G. Ketterer will sell about 30 head of Jerseys. Twenty-four are well bred and registered cows and heifers, fresh or will freshen soon. There will be two bulls sold, one tried sire and one yearling. Four high-grade cows will also be sold. Mr. Ketterer is not going to a great deal of expense in making this sale and consequently he does not expect to receive high prices from breeders. No doubt you can buy Jerseys worth the money in this sale. If you are interested write the owner for his sale list. See page 28.—Adv.

The spire of an old English church has been twisted into almost spiral form by unequal contraction and expansion of lead and wood in its construction.

PART IV--One Squaw Man.

CHAPTER VI.

On the Heights.

WHILE they commented, and wondered, and praised, and found fault with him, the day drifted into darkness, the darkness into a dreary dawn; and through all changes of the hours the outlaw stalked, with sometimes his ghastly companion bound to the saddle, and then again he would remount, holding Snowcap in his arms—but seldom halting, never wavering; and Mowitza, who seemed more than ever a familiar spirit, forged ahead as if ignoring the fact of hunger and scanty herbage to be found, her sturdy persistence suggesting a realization of her own importance.

A broad trail was left for them, one showing that the detachment of braves and the horses of the troops had returned under forced march to bear the news to their village—and such news!

The man's dark face hardened and more than one of those expressive maledictions broke from him as he thought over it. All his sympathies were with them. For five years they had been as brethren to him; never had any act of treachery touched him through them. To their people he was not Genesee the outcast, the immoral, the suspected. He was Lamonti—of the mountains—like their own blood.

He was held wise in their councils, and his advice had weight.

He could have ruled their chief, and so their nation, had he been ambitious for such control.

He was their adopted son, and had never presumed on their liking, though he knew there was little in their slender power that would not have been his had he desired it.

Now, he knew he would be held their enemy. His influence had encouraged the sending of that message and the offered braves to the commander of the troops. Would they grant him a hearing now or would they shoot him down, as the soldier had shot Snowcap, with his message undelivered?

Those questions, and the retrospection back of them, were with him as he went upward into the mountains to the north.

Another night was falling slowly, and the jewels of the far skies one by one slipped from their ether casket, and shone with impressive serenity on the crusted snow. Along the last ridge Mowitza bore for the last time her double burden. There was but a slope to descend, a sheltered cove to reach, and Snowcap would be given back to his kindred.

The glittering surface of the white carpet warmed into reflected lights as the moon, a soft-footed, immature virgin, stole after the stars and let her gleams be wooed and enmeshed in the receptive arms of the whispering pine. Not a sound broke through the peace of the heights. In their sublime isolation, they lift souls as well as bodies above the commonplace, and the rider, the stubborn keeper of so many of their secrets, threw back his head with a strange smile in his eyes as the last summit was reached—and reached in the light of peace. Was it an omen of good? He thought of that girl back in the valley who was willing to share this life of the hills with him. All things beautiful made him think of her, and the moon-kissed night was grand, up there above where men lived. He thought of her superb faith, not in what he was, but in what her woman's instinct told her it was possible for him to be. What a universe of loves in human hearts revolves about those unseen, unproven substances!

He thought of the time when she had lain in his arms as Snowcap was lying, and he had carried her over the hills in the moonlight. He was bitterly cold, but through the icy air there came the thrill and flush of that long-past temptation. He wondered what she would say when they told her how he had used his freedom. The conviction of her approval again gave that strange smile of elation to his eyes; and the cold and hunger were ignored, and his fatigue fell from him. And with the tenderness that one gives to a sleeping child, he adjusted with his wounded hands the blanket that slipped from the dead boy, raising one of the rigid arms the better to shroud it in the gay colors.

Then the peace of the heights was broken by a sharp report; the whiteness of the moonlight was crossed by the quick, red flash of death and Mowitza stopped still in her tracks, while her master, with that dead thing clasped in his arms, lunged forward on her neck.

CHAPTER VII.

A Rebel.

WITHIN the confines of Camp Kootenai there was a ripple of rejoicing. At last, after four days lost because of the snow, Major Dreyer had arrived, pushing on with all possible haste after meeting the runner—and, to the bewilderment of all, he rode into camp on one of the horses stolen almost a week ago.

"No mystery about it—only a little luck," he said in explanation. "I found him at Holland's as I came up. A white man belonging to the Blackfeet rode him in there several nights ago. The white man got drunk, picked a row, and got his pay for it. They gave him grave-room down there, and in the morning discovered that the beast had our brand, so gave him up to us as we came through."

Needless to say that this account was listened to with unusual interest. A man belonging to the Blackfeet! That proved Genesee's theory of which he had spoken to Captain Holt—the theory that was so thoroughly discredited.

When word was brought that the Major's party had been sighted from the south, Fred and Rachel could hardly wait for the saddles to be thrown on the horses.

Tillie caught the fever of impatience, and rode down beside Hardy. Stuart was not about. The days since Genesee's departure he had put in almost entirely with the scouts stationed to note any approach from the north; he was waiting for that coming Kalitan, for the first time since Genesee's flight, came into camp. The man who had seemed the friend of his friend was again in command; and he showed his appreciation of the difference by presenting himself in person beside Rachel, to whom he had allied himself in a way that was curious to the rest, and was so devotionally serious to himself.

"Then, perhaps it was not that Genesee who stole the horses, after all," broke in Fred, as her father told the story.

(To be continued.)

Ask your neighbor to subscribe for The Wisconsin Farmer.

Here are figures taken from the year book of the U. S. Department of Agriculture showing the average annual values, for a period of 15 consecutive years of a 160-acre Montana crop of

Wheat	$3,019.20	Oats	$ 2,820.80
Barley	3,168.00	Rye	2,419.20
Hay	2,659.20	Potatoes	14,208.00

That's Montana—the greatest grain producing state in the Union. The government figures given at the left tell the story—there are fortunes making in Montana. 35,000,000 acres of rich virgin land, at reasonable cost, await hustling men to turn them into profitable farms.

Development Unparelleled

Montana is a great and growing commonwealth, with a future of tremendous agricultural prosperity assured. $12,000,000 has been spent recently by the *"St Paul Road"* in electrifying its main line across the state, an evidence of this company's faith in Montana. This monumental achievement is to be a big factor in the future upbuilding of the state, developing new industries, broadening the farmers' markets, improving living conditions and increasing land values.

Satisfactory Homemade Cooker

The advantages of a fireless cooker are numerous. It saves fuel, saves time, allows the housewife to prepare her meal and leave it without danger of overcooking, makes it easier to utilize cheaper cuts of meat, and during the summer months eliminates much heat from the kitchen.

There are a great many excellent fireless cookers on the market, but if one does not care to go to this expense a very satisfactory one may be made at home. The outside container may be a tightly built wooden box, an old trunk, a small barrel, a large butter or lard firkin of tin, or a large galvanized-iron bucket with close-fitting cover. The well-built box of convenient size is perhaps the most satisfactory.

Longitudinal section through fireless cooker, showing details of the construction: A, Outside container (wooden box, old trunk, etc.) B, Packing or insulating material (crumpled papers, cinders, etc.). C, Metal lining of nest. D, Cooking kettle. E, Soapstone plate, or other source of heat. F, Pad of excelsior for covering top. G, Hinged cover of outside container.

If a box is to be used its size will depend on the size of the cooking kettle to be used in it and on whether there are to be one or two compartments. It must be large enough to allow for at least four inches of packing material all around the "nest" in which the cooking kettle is to be placed. For the sake of cleanliness and convenience the nest should be lined with metal and should be a trifle larger than the cooking utensil. If an extra source of heat, such as a hot brick or plate, is to be used, a metallic lining for the nest is imperative. For this purpose a galvanized iron or other metal bucket may be used, or, better still, a tinsmith can make a lining of galvanized iron or zinc which can be provided with a rim to cover the packing material. In case no hot stone or plate is to be used in the cooker the lining can be made of strong cardboard.

Homemade fireless cooker, showing packing and cooking vessel.

For the packing and insulating material a variety of substances are suggested by the home economics office of the department of agriculture. Asbestos and mineral wool, according to these experts, are good and have the additional advantage that they do not burn. Ground cork (such as is used in packing Malaga grapes), hay, excelsior, Spanish moss, wool and crumpled paper may also be used satisfactorily. Of the inexpensive materials that can be obtained easily, crumpled paper is probably the most satisfactory, since it is clean and odorless and, if properly packed, will hold the heat better than some of the others. To pack the container with paper, crush single sheets of newspaper between the hands. Pack a layer at least four inches deep over the bottom of the outside container, tramping it in or pounding it in with a heavy stick of wood. Stand the container for the cooking vessel, or the lining for the nest, in the center of this layer and pack more crushed papers about it as solidly as possible. If other packing, such as excelsior, hay or cork dust, is used, it should be packed in a similar way. Where an extra source of heat is to be used it is much safer to pack the fireless cooker with some noninflammable material, such as asbestos or mineral wool. A cheap and easily obtained substitute are the small cinders sifted from coal ashes, preferably those from soft coal, which may be obtained at the boiler house of any mill. The cinders from hard coal burned in the kitchen range will do, however. Experiments with this material made by home economics specialists of the department showed that it is very nearly as satisfactory as crumpled paper as a packing material. If a fireproof packing material is not used a heavy pad of asbestos paper should be put at the bottom of the metal nest and a sheet or two of asbestos paper should be placed between the lining of the nest and the packing material. Whatever packing material is used, it should come to the top of the container for the kettle and the box should lack about four inches of being full. A cushion or pad must be provided to fill completely the space between the top of the packing and the cover of the box after the hot kettles are put in place. This should be made of some goods, such as denim, and stuffed with cotton, crumpled paper or excelsior. Hay may be used, but will be found more or less odorous.

The kettles used for cooking should be durable and free from seams or crevices, which are hard to clean. They should have perpendicular sides and the covers should be as flat as possible and provided with a deep rim shutting well down into the kettle to retain the steam. It is possible to buy kettles made especially for use in fireless cookers; these are provided with covers which can be clamped on tightly. The size of the kettle should be determined by the quantity of food to be cooked. Small amounts of food cannot be cooked satisfactorily in large kettles, and it is, therefore, an advantage to have a cooker with compartments of two or more different sizes. Kettles holding about six quarts are of convenient size for general use. Tinned-iron kettles should not be used in a fireless cooker, for, although cheap, they are very apt to rust from the confined moisture. Enameled-ware kettles are satisfactory, especially if the covers are of the same material. Aluminum vessels may be purchased in shapes which make them especially well adapted for use in fireless cookers, and, like enameled ware, they do not rust.

Instructions on how to use the homemade cooker will be given in next week's issue.

The Place of Eggs in the Diet.

Because of the peculiar food value of eggs, their relative freedom from waste, and the ease with which they may be prepared, their use as meat substitutes, at least, is often desirable, even when a consideration of their price alone would not so indicate. This is stated in a recently published professional paper of the office of home economics of the U. S. Department of Agriculture, Department Bulletin 471. It is pointed out, however, that while this is true of eggs served as one of the principal dishes of a meal, it often is not true of eggs used in cakes, puddings, and other desserts along with meats. It is in the latter use of eggs that the housewife, who wishes to economize, can try especially to curtail consumption. A fact which makes this latter practice easier is that with the present availability of baking powders, cornstarch, gelatine, etc., the use of eggs to impart lightness or to thicken liquids is not now essential as it was in the past.

The principal food element furnished by eggs is protein, the nitrogenous tissue-building element whose presence in considerable proportions also gives meats, fish, milk, cheese, etc., their special food value. Eggs can, therefore, be substituted in the diet for the latter foods without materially altering the proportion of protein consumed. In addition to protein, eggs also furnish fat and a number of valuable mineral elements, including sulphur, phosphorus, iron, calcium and magnesium, in an easily assimilable form, and are believed also to be rich in certain essential vitalizing elements called vitamins.

Like milk and unlike meats, eggs do not contain substances convertible in the body into uric acid. Their shells constitute the only waste materials. Ninety-seven per cent of the portion eaten—a high proportion compared to other foods—is digested. No extended cooking is necessary for eggs and there is, therefore, a saving of time, labor and fuel in their preparation when they are compared with many other foods.

Though wholesome when fresh and clean, eggs may be decidedly unwholesome when old or dirty. The housewife should be careful, therefore, to choose eggs which are as clean and fresh as possible. Similarly, the producer of eggs should keep nests clean and sanitary and should collect eggs frequently. It is also well to insure the production of eggs with good keeping qualities by producing only infertile eggs after the hatching season.

Be Kind to Old People.

Dear Young Folks:—I am sending a story to the editor and if it is printed I hope you will enjoy reading it.

Once upon a time there lived an old woman who was very lame and had to use a cane to go about with. She lived all alone in a poor shattered house in a large city.

There was just one little boy in that part of the city where she lived who would help her at all. In the evening after school he would go to her house and chop wood for her and carry enough into the house for the next day. Then in the morning, before school, when it had snowed during the night, he would shovel the walks and do everything he could for her.

All the other boys of his age would make fun of him and want him to go coasting or skating with them. But he would say, "Mother has taught me this motto, 'Be kind to the old people'."

When this boy grew up he was the

most respected young man in the city and he never forgot the motto which his mother taught him when he was a boy. —Evelyn.

Two Pet Cats.

Dear Young Folks:—I am thirteen years old and go to Shell Bark school. I will write about my cats. I have two pet Maltese cats. Their names are Tom and Molly. Tom is the larger cat and he likes to follow me around. Molly will not go without an invitation. These cats came from our neighbor's one day and have stayed ever since. They were very wild when they came, but are tame now. The way Tom became tame was by papa milking in his mouth. Tom had been at our place a week before Molly came.

Tom is a very playful cat and he is always looking for fun. When we play with him he grabs at our hands with his paw. He does not try to hurt anyone. In the summer time he goes out in the pastures and catches ground squirrels. He brings them into the yard and plays with them. He throws them into the air and catches them as they come down. He worries them until they die, and then eats them for his dinner. One hot day he was taking a ground squirrel to a shade tree to eat it, so when he got enough he could go to sleep. In the winter time he likes to play in the snow. Sometimes when I go skating he goes along. He gets in front of me and I fall down. One day when I was coasting he got on my back and I took him for a ride. One time I hit a rock and that scared him so he won't coast any more. Tom also likes to catch sparrows. He will not kill chickens.

Molly is not like Tom. She does not play with things she catches, but gives them to her kittens. I think Molly and Tom are good cats. —Wayne.

Our Fashion Department.

All Patterns 10 Cents Each

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to WISCONSIN FARMER Madison, Wis.

1614—Children's set comprising a yoke dress with sleeve in wrist or elbow length, a slip and one-piece drawers. The pattern comprising all styles illustrated, is cut in 4 sizes: 1, 2, 4 and 5 years. The dress requires 2½ yards, the slip 2 yards and the drawers ¾ yard of 36-inch material for a 2-year size.

1977—A smart and practical apron model. The pattern is cut in 4 sizes:

34, 38, 42 and 46 inches bust measure. It requires 7¼ yards of 36-inch material for a 38-inch size.

1596—Ladies' home or morning dress. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 6⅜ yards of 36-inch material for a 30-inch size.

1767—A stylish dress for the little miss. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 4⅛ yards of 36-inch material for an 8-year size.

1983—A popular style for the growing girl. The pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 4 yards of 44-inch material for a 12-year size.

1975—Ladies' dressing or house sack. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 3½ yards of 44-inch material for a 36-inch size.

1986—Girls' guimpe dress, with sleeve in either of two lengths. The pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 1½ yards of 27-inch material for an 8-year size, for the guimpe, and 3¼ yards for the dress.

1328—Ladies' shirt waist, with convertible collar. The pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. In size 36 the pattern will require 2⅜ yards of 44-inch material.

Waist 1979-Skirt 1995—A splendid dress for business and general wear. The waist 1979 is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. The skirt 1995 in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 7⅛ yards of 36-inch material for a 36-inch size. Two separate patterns, 10 cents for each pattern.

1872—Dress for misses and small women. The pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 6¾ yards of 36-inch material for a 16-year size.

2003—Ladies' dress. The closing is in coat style. The pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6¾ yards of 36-inch material for a 36-inch size.

1728—A new and practical ladies' yoke petticoat. The pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅝ yards of 36-inch material for a 24-inch size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for February 25, 1917.

Jesus at Pool of Bethesda.

LESSON TEXT—John 5:1-15.

GOLDEN TEXT—It was Jesus which had made him whole.—John 5:15.

Following the events of last Sunday's lesson, Jesus went to Jerusalem to attend the feast (v. 1). He went up according to the requirements of the Jewish law (Ex. 34:23; see Gal. 4:4), but he was not satisfied with the conventional fulfilling of the duties for that occasion, nor was he occupied with social and commercial functions, but in "going about doing good." The feast was an occasion of joy and mirth on every hand, but in the midst of it is this great need so graphically pictured in this lesson. How true this is to our daily experience. Teachers should appeal to the imagination of their scholars and describe as vividly as possible this pool. Let them depict a room, on the floor of which is a pool; in one corner of the room a stairway leading up to the ceiling; surrounding the room, at the top of the wall a broad walk; on the wall, looking down toward the floor and the pool is "a multitude of them that were blind, halt and withered." These were the wretched ones who sought the pool, and evidently Jesus sought the most wretched of this company.

I. Jesus went where there was need (v. 6). In the midst of this company Jesus "saw" this man lie. He had been there often (v. 7), and his case seemed to be beyond all hope, but there is nothing too hard for God (Gen. 18:14; Jer. 32:17).

II. Jesus throws the responsibility upon the man (v. 6). Jesus had eyes not only to see need, but he also saw God's and his own personal power to relieve the need. The question is, what do we see as we journey through life?

III. Jesus was moved with compassion (Matt. 14:14). He always has that feeling when he looks upon suffering and the misfortunes of men (Heb. 13:8; 4:15-16; Isa. 63:9). Jesus does not do for the man what the man can do for himself; so he makes his first appeal to the man's desire, and, through his desire, to the man's will, "Wilt thou be made whole?" The fact that he has been a long time in his predicament, or the fact that a sinner has been a long time in an evil state is no reason for supposing that Jesus will not take interest in him or that he cannot save and help and heal him (Matt. 9:21; Luke 8:43; Acts 3:2). His question throws the whole matter upon the will of the man. Jesus is willing and able; the only question is, are we willing?

IV. Jesus commands the impossible. The man thought the only way he could be made whole was through the efficiency of the waters in this pool, but Jesus, by speaking a word, had the power that would heal him (Ps. 107:20); so today it is the power of the word of Christ that can save all who believe on him (Rom. 1:16). All we have to do to live is to hear and believe (John 5:24). With the command of Christ, "Rise, take up thy bed," was enabling power. The cure was not only complete, but it was instantaneous (Acts 3:7, 8).

V. He worked a complete cure. He was made whole even according to the question which Jesus had asked at the outset. The man at once began to use this Christ-given strength by taking up his bed, and doing exactly as he was commanded (II Tim. 3:12). Jesus likes these hard cases, those of "long standing" (v. 5). He also likes those that are the results of sin, for that was his work in the world (v. 14; Matt. 1:21).

Summary: (1) Jesus cures the sick, not by what he does to them, but what he does in them.

(2) Christianity is the gospel for the body as well as for souls of men.

(3) The gospel of Jesus is the beginning of a new life for every man who accepts it.

(4) Sickness and trouble are frequently the instruments of God's providence, bringing men to realize their sins and their need.

(5) No matter how great the progress of modern medicine or the skill of physicians, there is always the need of the Great Physician.

The Minnesota state game and fish commissioner, Carlos Avery, is asking organizations of game protectionists, farmers, citizens in general, bird clubs and all others who have the good of the state at heart, to help care for the birds who are in danger of starvation in cold weather. He also asks for reports from clubs or from individuals on the success of work for the birds, and for information as to methods used.

"Standard" Plumbing Fixtures for Bath Room Kitchen Laundry

For You Who Intend to Build or Remodel

We have two booklets of general value on the subject of good plumbing, and of *particular* value in showing why your choice of Plumbing Fixtures for Bath, Kitchen or Laundry should be "Standard"

The name "Standard" represents the longest and broadest experience in this branch of manufacture—the greatest variety of styles and prices. Whatever your plumbing needs may be, you will find buying service and *useful* service in "Standard". Ask your plumber about this old, reliable line. Insist that every plumbing fixture you buy has on it the Green and Gold label.

THESE TWO FREE BOOKS MEAN BIGGER CROP PROFITS FOR YOU!

My Famous Book "A Streak of Gold" and Galloway's 1917 Catalog

Ask For Them Today! A Postal Gets Both!

SAVE $25 TO $50 ON A MANURE SPREADER

My book "A Streak of Gold" tells how to get the most out of the manure crop with the least labor. My 1917 catalog tells how a run-out unproductive farm was turned into a gold mine crop producer. How to increase your corn crop from 15 to 25 bu. per acre. How a Galloway spreader will pay for itself in one year by increasing crop profits and leave money to put in the bank besides! How and why I save you $25 to $50 on a spreader by selling direct.

TURN THE MANURE CROP INTO CASH AT HARVEST!

Do it with a Galloway 1917 model No. 8 spreader. Spreading now means bigger crops this fall!

Prices never better! The producer is having his inning! Now is the time to get that big manure pile OUT ON THE LAND because every load means CASH IN THE BANK next fall for farm improvements, pleasures or other things you want. Get your manure crop out on the corn land--top dress the winter wheat! Get it on the soil where you are going to sow oats! Top dress the meadows--the alfalfa--the clover! A Galloway spreader used steadily for one or two weeks means that it will PAY FOR ITSELF because its use represents MONEY AT HARVEST time you otherwise would not get. Quit spreading by hand or using out of date spreaders when you can buy the best spreader on earth--the Galloway 1917 model Low Down No. 8 No. 5, or No. 1A and SAVE FROM $25 TO $50 over prices usually paid for spreaders not as good--not as down to date in design--not as light in draft--made of as fine materials, nor covered by the eleven Galloway spreader patents found exclusively on the Galloway.

GALLOWAY'S NO. 8 LOW DOWN SPREADER

is the crowning achievement of my spreader manufacturing career! Now built stronger than ever. The new Galloway wide-spreading V-shaped rake on every machine. DO NOT CONFUSE Galloway spreaders with low priced machines that do not have the special EXCLUSIVE PATENTED FEATURES and genuine merit (backed up by tens of thousands of Galloway spreader users). Beware of cheap, absolutely worthless imitations of the genuine Galloway at any price. DON'T BUY A SPREADER OF ANY MAKE OR KIND until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk WITHOUT OBLIGATING YOURSELF in any way!

30 DAYS' FIELD TRIAL

Test Galloway spreaders on your own farm in your own way and take your own time! They are returnable to us within one year if they do not come up to every claim we make for them! I will **pay freight both ways.** A Galloway spreader must sell itself to you. You are the judge. Spreaders shipped from Waterloo, St. Paul, Kansas City, Chicago or Council Bluffs—whichever is nearest your station, more convenient to you.

BACKED BY A $25,000 BOND

I have deposited in the Black Hawk National Bank of Waterloo a legally executed $25,000 bond to guarantee that I will live up to every agreement and STAND BEHIND EVERY CLAIM I make for Galloway manure spreaders, cream separators, gasoline engines, etc. You have nothing to lose and everything to gain when you deal with Galloway. I manufacture these spreaders in my own great chain of factories right here in Waterloo. Come and see me any time. You are welcome and I will be glad to show you how Galloway divides the melon and ships direct from factory to farm.

WORTH $50 MORE THAN ANY OTHER SPREADER

Remember this spreader is **low down**—only 42 in. high to center of box. Easy to load. Lightest draft spreader of its capacity built. Two horses handle Galloway spreaders anywhere. The Galloway **wide-spreading V-rake, worth $15 extra** on any spreader—costs you nothing extra on the **Galloway.** The **invincible, irresistible, patented roller feed**--an **exclusive** Galloway feature—the secret of its **light draft,** alone **worth $25 extra** on any spreader--exclusive again on the Galloway--costs you **nothing extra. Patented Automatic stop, Uniform Clean Out Push-Board—worth $10 extra** on any spreader—exclusive on the Galloway—costs you nothing extra. These are only a few of the special features you will find on the Galloway which are protected by Galloway patents. Don't buy a spreader of any make or kind until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk without obligating yourself in any way Try it in your field for thirty days and return to me within one year if not perfectly satisfactory. Remember we manufacture in our own factories and sell direct from factory to farm.

Notice These Exclusive Features

(A) Angle steel endless apron running over solid bottom. Adjustable from 6 to 24 loads per acre. (B) Our patented automatic stop, uniform clean out push-board--worth $10 extra on any spreader. Exclusive on the Galloway--costs you nothing extra.

(C) Feed lever. Adjustable to any number of loads per acre. Convenient, handy--above the load.

(D) Gear lever. Throws both sides of beater into gear simultaneously. Sprockets on both rear wheels. Remember double chain drive. No twisted beater, broken beater shafts. Gearing equipped with differential. Power continuously applied to beater shaft.

Read about these and other Galloway exclusive spreader features in my new big 1917 book.

INDISPUTABLE PROOF: I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125.--Geo. A. Kralik, Okla. City, Okla. I consider it equal to a prominent machine sold for $140. One neighbor who has used both says he would rather have the Galloway---W. O. Cracraft, Eckley, Colorado. There are six Galloway spreaders in my neighborhood. They tried my spreader first. All are more than pleased. Have had no repairs in seven years.—Edw. Semmelroth, Tekonsha, Mich. I saved $39. Believe I got a better spreader than was offered me here for $135.--A. T. Miller, Orella, Nebraska.

Wm. Galloway, Pres., Wm. Galloway Co. 39 Galloway Station **Waterloo, Iowa**

1500 Free Pony Votes for You

Here is your chance to get 1500 free pony votes and join the Popular Pony Club. The 1500 free votes will not cost you a cent. All you have to do is to send me your name and address.

I have given more than forty ponies to members of the Popular Pony Club, Every boy and girl who has received one is delighted.

You Can Win a Pony Too

This is Your Chance. If you will send me your name and address I will send you the **1500 Free Pony Votes** and tell you all about the Popular Pony Club and how you can be a pony winner.

The President, Popular Pony Club,
625 Popular Bldg. Des Moines, Iowa

In and Around Wisconsin

The Cut-Over Land Conference is to be held at Eau Claire, Friday and Saturday, February 23d and 24th. The purpose of this conference is to formulate a constructive program for the immediate development of cut-over lands in Upper Wisconsin. There will be speakers present representing the Wisconsin College of Agriculture, the Wisconsin Advancement Association, the companies which own cut-over lands, the railroads, bankers, the press and the state department of agriculture.

The January report of the Stanley Cow-Testing Association shows 236 cows tested and three unprofitable cows sold for beef. Two pure-bred sires were added to the association herds and also two pure-bred Brown Swiss cows. Mr. R. F. Adams, the tester, is planning to re-organize and encourage the association in the near future. Mr. Adams states that he will have charge of a large herd of cows the coming year and that the first bit of equipment which goes into his barn will be a milk scale and a milk sheet.

The women of Monroe, Wisconsin, have been talking of a boycott on potatoes. The hope is that such a boycott would result in lowering the price of potatoes. There seems to be little hope of lowering the price of "spuds." Some have had the opinion that when storage potatoes were let loose there would be a drop in price. Unfortunately, however, the crop was light last year in most of the potato-growing centers. Kansas, Missouri and Iowa have been calling on Wisconsin for potatoes, and we have been in the habit of distributing almost exclusively at Chicago. If Wisconsin had 50,000,000 bushels of good potatoes now they could be sold at a good, round price.

The question has arisen as to whether it will pay to put in many potatoes next year. To this question there seems to be but one answer, and that in the affirmative. When the market goes high on any product, it is not likely to go back with a sudden drop. People have become used to paying high prices for potatoes, and the prices this year cut in two in the middle would make tremendous profits for Wisconsin growers if they could have a big crop next year. There will not be much of an increase in potato growing in the South so long as cotton is so high. Cotton is easier to raise than potatoes and the southerner likes the cotton crop best. In Kansas, the Dakotas, Iowa and Minnesota there will probably not be a very marked increase in potato acreage. Minnesota may be the exception. But wheat is high and so is corn and so is beef and so are hogs, and there is no particular incentive for the other grain-belt farmers to grow potatoes which, to be profitable, require more care and attention than the majority of field crops. So we think it safe to say that potatoes will be a good crop to grow in 1917, and we do not look for a drop in price to such an extent as to impair good, fair profits.

A bill has been drafted to present to the legislature, providing for the establishment of a state marketing department with a superintendent in charge at $6,000 per year salary. Similar bills are now before the Minnesota and North Dakota legislatures. The purpose is to make an exhaustive study of farm marketing, and to aid the farmer in the most economical methods of distribution of his products. It is proposed to start out this marketing bureau with $100,000 capital, and that the bureau shall return this advanced capital to the state as soon as it begins to earn revenues.

Two good creamery reports come to The Wisconsin Farmer from Pierce county, Wisconsin. The Lawton Co-operative Butter and Cheese Company, for the year ending December 31, 1916, gathered 1,878,179 pounds of cream, which produced 470,450.92 pounds of butter fat from which 569,751.5 pounds of butter were made. The company received $178,464.52 from all sources. The Ellsworth Creamery Company received 1,419,225 pounds of cream and 37,581 pounds of milk, which produced 349,967.53 pounds of butter fat, and made 424,697.25 pounds of butter. The receipts of this company for the year were $130,022.60.

CHAMPION TEN-EAR SAMPLE CORN AT WISCONSIN EXPERIMENT STATION 1917 GRAIN SHOW.

Some good results have come to pass in Door county as a result of the Farmers' Week program at Sturgeon Bay. A county potato growers' association has been organized, with Benjamin Jelinek, of Sturgeon Bay, secretary. The drainage district in two towns, including an area of about 1,000 acres has been partially organized under the direction of E. R. Jones, of the college of agriculture. Two banks in Door county will start distributing milk sheets free to farmers. There were about 1,400 farmers registered for the men's sections Farmers' Week, and in addition to this there were a large number of women interested in the Home Makers' Short Course.

Questions and Answers.

Charging a Storage Battery.

Please give an outline of a storage battery charging device, using 220-volt alternating current and a bank of lamps for resistance. How many and what size lamps should be used for one battery? How many lamps for a number of batteries in the circuit? Can an ordinary dry cell ammeter be connected in the circuit to ascertain the number of amperes flowing? Can a rectifier or motor be used to make A. C. current to D. C. current? What size and type of motor should be used? Is a fuse required with this outfit?

FIGURE 2.

Answer.—What is known as "rotary converter" may be used to change an alternating current to a direct current. A rotary converter is really a combined motor and generator, the motor being A. C. and the generator being D. C., both windings being on the same machine, the armature having slip rings at the A. C. end and a commutator at the D. C. end. This machine can be wound so as to change a 220-volt A. C. current to a D. C. current of any desired voltage less than 550. If you were to use current in large quantities, this would be the best outfit, as a bank of lamps would not be required. The power consumed in lighting a bank of lamps is wasted; this does not amount to much, however, when a battery is charged only occasionally.

Figure 2 shows the wiring for charging two batteries from an A. C. circuit, using a bank of lamps for resistance. WW are the wires from the main line to the charging switch S. R is the rectifier; LLL are the lights. The main-line wires should be fused at the main cut-out switch near the point where the wires enter the building; also at the branch blocks where the line to the charging switch is taken off. The voltage of the lamps should be the same as the voltage of the line unless several batteries are connected in series, in which case lamps of less voltage would be required, depending upon the combined resistance of the batteries. The higher the candle power of the lights, the fewer the lights required. Enough lights should be used to give a battery a complete charge in about ten hours. On a 110-volt circuit, eight 32-candle-power lights may be used to charge a 60-ampere-hour battery. A less number could be used, but a longer time would be required to do the charging.

An ordinary dry cell ammeter cannot be used.

Upper Michigan Potato Yield

Verner Felt and Cleo Farm, who reside near Marquette, Michigan, in what is known as the clover land country, are called the champion potato growers of Michigan. By using improved methods these boys and eight others made remarkable records in the yields of potatoes in 1916. The average yield of potatoes per acre for the highest ten in the Michigan potato contest, representing sixty-eight clubs, was 287.2 bushels.

The following is the list of the ten boys who had the highest yields:

	Bushel
Verner Felt, National Mine, Marquette county	402.6
Matie Franz, Loretto, Dickinson county	332.0
Clyde Mantta, Tapiola, Houghton county	301.0
Richard Grangood, Tapiola, Houghton county	286.6
Cleo Farm, National Mine, Marquette county	277.1
Bernard Nelson, National Mine, Marquette county	270.9

VERNET FELT, CHAMPION POTATO GROWER.

Weikko Lukkarinen, Palmer, Marquette county	258.0
Howard La France, Hersey, Osceola county	252.0
William Skog, Metropolitan, Dickinson county	250.0
Joseph Dziedzie, Loretto, Dickinson county	240.0

The average yield per acre for the highest ten is 287.02.

Although young Felt, who is but sixteen years old, also secured the largest profit for his work, yet this was not the case with the others, owing to difference in operation cost and in the kind of potatoes grown. An arbitrary scale was adopted in which all market potatoes were computed at $1.25 per bushel; all cull potatoes at 30 cents per bushel and seed potatoes at $2 per bushel.

On this basis the ten highest in profits were:

Verner Felt, National Mine, Marquette county	$503.30
Frank Van Elsacker, Northland, Marquette county	372.14
Richard Grangood, Tapiola, Houghton county	361.40
Bernard Nelson, National Mine, Marquette county	276.27
William Skog, Metropolitan, Dickinson county	251.80
Howard La France, Hersey, Osceola county	241.10
Julia Issacson, Metropolitan, Dickinson county	233.76

CLEO FARM, WINNER OF SECOND PRIZE.

Irene Parent, Loretto, Dickinson county	231.10
Matie Franz, Loretto, Dickinson county	220.90
Kenneth Stevens, Northland, Marquette county	207.70

The average profit per member for the ten highest was $289.96 per acre.

But these boys who were aroused to a contest and high pitch of enthusiasm were not the only ones who had good potato yields in the clover land last year. Joseph Borbot, a new settler, raised 2,400 bushels on ten acres of land. Chas. Gogran, residing on one of the older farms of Upper Michigan, raised 1,500 bushels from seven acres and the Morgan-Cedar Lumber Company raised 4,051 bushels on thirteen acres.

The clover land country had no drouth last year, as did some other potato-growing sections of the middle West.

ENDURANCE

THE hinges on the barn of the old homestead were hand-hammered by the blacksmith. The iron was slowly and carefully made and was free from most of the chemical impurities that cause rust. That is why those old iron hinges lasted to see many doors come and go.

"ARMCO" IRON CORRUGATED CULVERTS

like grandfather's barn door hinges, are made of iron so pure that they resist rust. They will outlast many ordinary metal culverts and, like the old hinges, will endure after the men who place them have passed away.

"Armco" Iron Culverts mean true economy in road building and upkeep; they represent prudence in the use of public funds. The trade-mark on every section is a pledge of "value received".

For full information on "Armco" Iron Culverts, Flumes, Sheets, Roofing, and Formed Products, write the manufacturer in your vicinity, or

ARMCO IRON CULVERT AND FLUME MFRS. ASSOCIATION
Cincinnati, Ohio

Your Next SILO

Before you build it, send for illustrated description of this new and improved storm proof construction. Seven five-eighths inch steel anchor rods (not cables) hold silo securely braced solid as a rock. The new improved Beaver Silo is made of selected coast fir, strong and close grained. Double angle irons forming inner hoops held tight to outer hoops by hook bolts, so that entire silo stands firmly anchored against any possible shock or stress. Compensating lugs with coiled steel springs allow for swelling or shrinking. Thousands in use in Wisconsin.

Tear out this advertisement write your name and address on the margin, and mail to us for illustrated description, also valuable tables which tell you how big a silo you need for your stock and acreage.

UPPER WISCONSIN

New Settlers.

To the Editor:—The first new settler came from Illinois in the spring of 1913 and settled at Cedarville, Marinette county, Wisconsin.

Cedarville at that time was only a switch where logs were loaded onto the main line of the C. M. & St. P. Railroad, running from Chicago to Calumet, Michigan.

The first settler's family lived in some logging camps during the first summer. His farm was cut-over land and had to be cleared ready for the plow. Some land was cultivated the first year, potatoes, corn, millet and buckwheat being planted. An excellent garden was raised and many cans of vegetables put up for winter use. More than 200 quarts of wild fruit were canned. There are quantities of wild strawberries, raspberries, blackberries, blueberries and gooseberries growing here.

THE FIRST SETTLER'S FAMILY FIRST LIVED HERE.

In the fall the new home was built and the family moved into it in November. In September two more families came. One more new house was built; the other family occupied the logging camps.

THE FIRST SETTLER IS NOW ENJOYING A NEW HOME.

These three families had a royal good time that first winter, even though it was six miles to the postoffice and several miles to any other neighbors.

In 1914 half a dozen more families came. Land was cleared and farming began in earnest. A Sunday school was started, a schoolhouse and a potato warehouse were built, more new homes were erected. On the Fourth of July there was quite a celebration, with sixty persons present. At Christmas time of that year all the new settlers had a dinner at the schoolhouse. The population of Cedarville then numbered forty-four and they all sat down at the table at one time like one big family.

The Cedarville Improvement Society was organized on Christmas day. This society has proved the best feature of our new settlement to hold the people together and keep them interested in their work and foster friendship.

There is a program at each meeting of the society. We have debaters to decide which is more profitable, the dairy cow or the old hen; which is the best to grow, alfalfa or clover, sugar beets or cucumbers; which is the best dairy cow, the Holstein or the Jersey; then we edit a society paper and some of the contributions have been printed in the local papers. We have music, speaking, dialogues, tableaux, mock trials and many other features. Sometimes we have a good speaker come from some agricultural school or experiment station and talk to us of the breeding of better dairy cows, the conservation of soil, crop rotation, pedigreed grains or some phase of the life of a dairy farmer.

In the spring of 1915 we were granted a postoffice. A store was started and we had a waiting station for those who desired to ride on the train. We named our streets. The fine macadamized state road running through Cedarville is "State street." "Illinois avenue" has five Illinois farmers living on it. "Wisconsin Boulevard" runs past the depot and the postoffice. Then "Maple Row," which has no maples on it, but the row is there and the maples may come later.

Our farms, too, are named, which gives each farmer a feeling of pride. We have a fine neighborhood of refined people.

We have an excellent union Sunday school. There is preaching services every Lord's day, and the young folks have a live, working Christian Enreavor Society. There is no lack of social life, no stagnation for the farmer's wife here.

Our community now numbers twenty-five families and more coming in the spring.

We have hundreds of acres of land in cultivation. We raise oats, corn, wheat, buckwheat, soy beans, rye, millet, barley, field peas, alsike, timothy and clover. The greatest of these is clover, for this is the home of the dairy cow and she has come to stay.

We raise everything for a balanced ration and a good dairy herd is the ambition of every farmer here.

There is a co-operative cattle buyers' association in this county that buys registered and high-grade Holstein and Guernsey cattle for the farmer who has no ready means with which to purchase good dairy cows and from three to five years are given him in which to make his payments. In this way "Bossy" pays her own bills. A carload of these Holstein cattle were brought to Cedarville for distribution.

Hundreds of tons of hay has been stacked here.

The clear, cold, spring-fed trout streams furnish a never-failing supply of drinking water and the abundance of forage crops that can be raised here will make of us a great dairy community in the greatest dairy state in the world, and some day we can say, "We came to this new country and took this job and we stuck. We took the chance others wouldn't and now they are calling it luck."

Mrs. Lucy L. Ferguson.

AND THE GREATEST OF THESE IS CLOVER.

ADVERTISEMENT.

One Partner Collects HIS Profits Before the Goods are Sold

THAT partner is the United States Government.

The business is the Brewing Industry.

The Government takes no chances—runs no risks—has no capital employed—no investment in plants or raw materials—yet it collects by far the *biggest part* of the profit *in advance.*

Before a barrel of beer can be sold $1.50 of the price must go into the Government Treasury. The Brewers must furnish the capital and the effort—run the business—take *all* the chances—and be satisfied with a much smaller profit than the big partner, the Government, gets.

Yet, should the big partner decide to quit the business the smaller partners would get *nothing.* The statutes of the states do not grant to those engaged in the Brewing Industry the right of *compensation.*

Is not that a fundamental defect in our laws? If American principles are grounded on fairness and equality, are we not entitled to the same right that *you* are?

If the people have the legal right to demand compensation when their property or business is damaged by legislation should not we at least be granted the right to have our case tried before a jury?

Why discriminate?

Why not lift a helping hand to correct injustice?

The Brewers of Wisconsin.

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Prichard's Percherons.

ANY doubt as to whether the American breeder can produce as good Percheron horses as are developed in France will be dissipated by a visit to the farm of W. E. Prichard & Sons, Ottawa, Ill., where as strong a lot of horses will be found as can be shown in any country. The senior member of the firm has been a prominent factor in the development of the draft horse industry for half a century and the two junior members are practical horsemen in everything that the term implies. While this firm has made importations on many occasions, it is in the breeding and development of the American drafter that they have scored their greatest successes. The writer has been familiar with the operations at the Prichard establishment for two decades and long ago realized that the last word in draft horses was represented in the animals they produced. A recent visit revealed one of the best lots of colts ever seen at the Prichard institution. For character, quality, compactness, good heads, strong backs, clean hocks, good feet and abundant bone they are strictly a top lot. The Prichard Percherons are developed under natural conditions. Nothing but honest, progressive, methods are in vogue at this breeding farm and the result is a class of animals that are amply able to speak for themselves. Many noted prize winners have been bred, raised and developed by Prichard & Sons and stallions of their rearing have made enviable reputations in the stud all over the country. If you want a young Percheron stallion that is right in every way and one that comes from an honorable and reliable breeding firm, it will pay you to investigate what W. E. Phichard & Son, Ottawa, Ill., have to offer. Their advertisement appears on page 29.—Adv.

The Noted Little Short-horns.

WE are always pleased to hear from Harvey H. Little, Evansville, Wis., who has one of the greatest herds of Milking Short-horns in the Northwest. His letter is as follows: "In reply to yours of the 23d of January will say that our stock has wintered well so far and never looked better at this time of the year. I have had 21 calves dropped since November 3d and all but one that died are doing fine and my cows never looked better, several gave from 1,200 to 1,500 pounds of milk in January. Just at this time we have five bulls that are choice individuals and out of the best cows in my herd. They are of serviceable age and if you know any one that wants a herd bull you can honestly recommend one of these. The calves out of Bonnie Scotchman heifers and sired by Maud's Knight are very promising. They show beef form and their dams are milking well. The dam of Maud's Knight was Roan Maud by a son of Rose of Glenside. She was first in class A at the International, 1913. I look forward to some great things from this bull. He is good individually and his milk inheritance cannot be beaten. Call on me when you get a little time." Mr. Little has the goods and any prospective buyer will do well to get in touch with him. See page 30.—Adv.

McKevitt Angus Offers.

THE McKevitt Bros., Bloomington and Bridgeport, Wis., are again before the public offering Aberdeen Angus bulls for sale. It is needless to say much about this firm, for they are known to be owners of one of the best Angus herds in the state. Just at this time they have seven young bulls for sale, five of which are old enough for service Most of them are sired by a Pride bull that heads their good herd. The bulls for sale represent the Pride, Erica and Miss Copeland families. For those that want a young sire that has been tried, we want to refer you to the three-year-old bull that the McKevitts have for sale. Papaw 183789 is sired by Protine 138373 and out of Pride McHenry 91st 138405. He is a double Pride and right in every way and for no fault is he being offered. The price asked is far below his value. Write at once if you are interested in Angus cattle. No matter what kind of cattle you have, a cross with an Angus bull will generally tone up the herd. The McKevitts have the goods and we gladly recommend them. Please mention The Wisconsin Farmer when writing.—Adv.

The Lefebure Belgian Emporium.

H. LEFEBURE & SONS, Fairfax, Ia., have issued their 29th annual catalog which is filled with attractive illustrations of the barns and horses to be found on their breeding establishment. This catalog gives much information that will be of interest to any man who owns either pure-bred or grade Belgians. This stud has produced scores of prominent winners at the leading state fairs of this country, as well as the International Expositions held in recent years. At the Panama-Pacific Exposition held in San Francisco, 1915, this firm was awarded the premier championship as exhibitor and breeder of Belgian draft horses. On the several farms included in this great breeding establishment will be found around 150 head of imported and American bred Belgian stallions and mares and it is well worth the time and expenditure of any one who enjoys seeing good bred horses to visit this plant and see the methods employed in breeding and rearing prize-winning Belgians. Mr. Lefebure owns more pure-bred Belgian mares than any man in America and is producing a high-class lot of Belgians that are a credit to his ability as a breeder. At all times this firm has on hand imported and American-bred stallions and mares of any age that are offered for sale at prices as low as is consistent with the quality of the horses. See page 29 and when writing kindly mention this paper.—Adv.

Great Percheron Dispersion.

ONE of the greatest sales of Percheron horses ever made in Wisconsin will be held Wednesday, March 21st, at the state fair grounds, Milwaukee, Wis. This sale will be the dispersion of two of Wisconsin's best Percheron studs, viz., that of Louis Lewellin & Sons Waterloo, Wis., and of Louis P. Sutter, Delavan, Wis. The stud of Lewellin & Sons needs no introduction to Percheron breeders or farmers in Wisconsin. These men are discriminating judges of Percheron type and the heavy winnings of their stud at the leading fairs in Wisconsin, including the state fair is evidence of their ability as judges, and as breeders. In 1915 and 1916 they won championship on stallions and mares in Wisconsin bred and owned division. In 1915 they also won first and second on stallion foals, championship on mares in the open class. In 1916 first on stallion and four mares bred by exhibitor, first on best three mares owned by exhibitor, first and second on get of sire, and many other prizes. All of these prize-winning stallions and mares will be included in this sale offering. This is a rare opportunity for breeders and farmers to get some proven breeding stock. The offering in the stud of L. P. Sutter is one of unusual merit. These stallions and mares were personally selected in the famous Percheron horse breeding districts of France and imported by Mr. Sutter in 1914, just before the outbreak of the European war, for use in his own private stud at Delavan, Wis. The stallions are the big ton kind with tremendoes bone and substance. They are coming four and five years of age. The mares are a nice lot of drafty animals, only two over five years of age the balance being under four. The colts in the sale will show the kind that these mares produce. This sale offers one of the few opportunities that there will be to obtain imported Percheron stock, as there is very little of it now or is likely to be in the near future, on the American market. Send for a catalog to James G. Boyd, 426 Sycamore St., Milwaukee, Wis., manager of the sale. See advertisement on page 28.—Adv.

Don't Forget This Holstein Dispersion.

THIS is the last opportunity we will have to call your attention to the dispersion of the Bell Croft Farm Holsteins which takes place at Burlington, Wis., Wednesday, March 7th. These cattle are owned by J. A. Forge of the above town and in view of the fact that he has rented his farm it has made this move necessary. Mr. Forge is a constructive breeder. Every sow on the place but the four foundation matrons have been raised by Mr. Forge. All females of milking age but two have substantial A. R. O. records made on Bell Croft Farm under ordinary conditions. The offering will be made up of 48 head which will include young service bulls and bull calves and cows and heifers. The cows are large, of a very uniform type, with large well-formed udders and are excellent producers. Had they been otherwise they would not have been retained in the herd. A son of the great sire, King Walker, will be sold. Few such bulls are being offered at this time and the opportunity is now before you to buy a herd bull that has produced A. R. O. daughters and comes from A. R. O. ancestors. We do not hesitate to recomment this herd, for no matter how far you travel to attend this sale, you will not be disappointed with the cattle to be sold. Burlington is in southeastern Wisconsin on the C., M. & St. P. and Soo lines, also on the electric from Milwaukee. The best of shipping facilities. The catalog is very descriptive of the cattle to be sold and you should have one if you are at all interested in cattle of this popular breed. Remember the date and place. Write at once for a catalog and please mention The Wisconsin Farmer. See page 31.—Adv.

This Man Advertises in The Wisconsin Farmer and Sells His Live Stock

"Enclosed you will find check in payment for advertising for our sale. We are pleased to state that The Wisconsin Farmer was one of our best advertising mediums, and that we are indebted for the good service rendered. W. V. Gousseff, County Agricultural Agent, Owatonna, Minn."

The Wisconsin Farmer, Madison, Wisconsin

Guaranteed Weekly Circulation, 90,000.

Circulation in Wisconsin, 76,769.

It Stops Them All.

THE farmer who uses Peerless fence and Peerless gates finds he has no need for worry over escaped stock. The gates are so firm and the fencing so secure that his widest bull can't get over or through it, and his most inquisitive pig can't get under. Yet the gates are easily operated by even the little daughter of the family. Peerless fencing and Peerless gates stand the wear and tear of years of service in all sorts of weather. They are reasonable in price too. If you have not seen the interesting series of advertisements of Peerless fence and gates it will be worth your while to look them up in our columns or better still write the Peerless Wire Fence Company for their big, free fence and gate book. Address them at 216 Michigan street, Adrian, Mich. And be sure to mention that you read about Peerless fence and gates in The Wisconsin Farmer.—Adv.

Well-Bred Holstein Bull.

THE chief factor in making a herd of cattle good producers starts in many years before they are born. In other words a cow must have an ability for large production in her make-up or feeding will not develop it. The young bull advertised for sale on page 30 by the Upland Farms, Walworth Wis., has had heavy production blood intensified for generations. It is reasonable to judge, therefore, that his daughters will be cows of good production ability. His sire is by Sir Korndyke Pontiac Artis, a 31-pound bull with two 30-pound daughters and 24 others from 20 to 29.76 pounds butter in seven days. His sire's dam is a 27.14-pound daughter of Sir Veeman Hengerveld, that has 76 A. R. O. daughter, nine with records over 30 pounds and 42 others with records over 20 pounds. The dam of the young bull for sale is a 13.12-pound daughter of Mooie Fayne Vernon, a good son of Mooie Fayne De Kol the 35.55-pound bull, that has three daughters with records over bull carries heavy production blood which is bound to prove equally productive in the next generation. This bull is well grown—well marked, being three-fourths white, the black spots being solid and he is of good type. He was born January 5, 1916, so is ready for immediate service. Send for his extended pedigree. When writing mention this paper.—Adv.

Shekleton's Draft Stallions.

FRANK SHEKLETON & SONS, Lawler, Iowa, well-known importers and breeders of Belgians and Percherons, write as follows: "During the past two weeks, we have had a good lot of buyers here, and our sales for the new year have been very satisfactory. Buyers are pleased with the high-class stallions that we have to offer and so far we have not had a man leave our farms without finding the kind of a stallion that he was looking for. Buyers who have been in several different barns this winter tell us that our stallions are among the best that they have seen. Our two year olds have especially been praised, on account of their large size and bone. We recently weighed one of our black two-year-old colts. He weighed 2,110 pounds and will not be three years old until next spring. We have a large number of two-year-old stallions to offer, many of them weighing now over a ton. Ten of those colts have been selected for herd heading purposes and have the best breeding obtainable. We wish to get in touch with parties who have full blood mares and are looking for a young stallion for a herd header. We are offering some exceptional Belgian stallions from two to six years old at very reasonable prices." See page 29 and write for prices, mentioning this paper.—Adv.

Don't Forget Pagel's Duroc Sale February 26th.

WE know that several farmers and breeders have been trying to buy bred Duroc Jersey sows at the various sales without much luck and there will be one more opportunity for you to buy sows of this breed in this territory. The last sale of registered swine to be advertised in The Wisconsin Farmer will be that of Geo. W. Pagel which will be held at Zumbrota, Minn., Monday, February 26th. Though this is the last sale of the season it is by no means the least important, in fact it is a sale that we are glad to recommend. The tried sows that will sell are big, they have quality, carry the best blood lines and are bred to good boars. The gilts are out of the big sows that you will see sale day that are being retained in the breeding herd. Many of the sows and gilts are bred to H. C. Wonder an outstanding boar with a world of quality. If we should be asked to name the best five boars in Wisconsin and Minnesota, H. C. Wonder would be included in the list. He pleases us and he will you. Try to attend this sale or be represented.—Adv.

Martiny Poland Chinas.

L. P. MARTINY, Chippewa Falls, Wis., is one of the "wheel horses" of the Poland China Association in this state. He is a natural born stockman and knows how to produce the good ones, Whether it be Guernseys, Poland Chinas or Percherons. Most men can raise a few good animals of one breed, but when a man can raise good ones of three breeds he is considered a constructive breeder. Martiny now offers bred gilts for sale. They have been bred to good, big-type boars to farrow in March and April. The Martiny Polands are known in Wisconsin wherever Polands are raised. If you are going to buy a Percheron stallion let Mr. Martiny describe the horses he has for sale. The writer has seen these stallions and we are glad to say that they are good enough to stand in any breeding locality, and the price asked is consistent with the breeding and quality that they possess. Make your wants known and mention this publication. See page [illegible] —Adv.

P. N. Collins' Poland Chinas.

P. N. COLLINS, River Falls, Wis., writes: "Buy me a good sow at some of the Poland China sales you have in Wisconsin—you know that I can't use a poor sow in my herd, so be careful. Am having excellent sales, have seven spring gilts to ship in Minnesota and Wisconsin on February 15th. As it looks at present I will not have enough gilts to supply the trade. The young boars are growing fine. Chief Price is as good as ever and the boar you bought for me sired by Black Jumbo will be as big as his sire. The breeders that visit my farm want a gilt or sow bred to one of these boars, they make the hit. My Short-horns have wintered fine and will have some good young things to sell later." Write Mr. Collins if you are interested in Polands or Short-horns, he'll give you a square deal. See page 29.—Adv.

Pulls Stumps With Ease.

A STUMP puller that can easily be moved and handled by one man is a great asset on the farm. Such a stump puller is the Kirstin, made by the A. J. Kirstin Company, 5546 Luddington St., Escanaba, Mich. It combines strength and durability with light weight, and works rapidly, clearing over an acre from one anchor. The Kirstin means a great saving in cost of clearing land, both because the original cost of the stump puller is small, and because it is handled by one man without the aid of horses. It is offered to Homestead readers on a ten-day trial offer and is backed by a 15-year guarantee. Write for their profit-sharing plan and

A Great Sale of Percheron Horses

Wednesday, March 21, 1917, at the State Fair Grounds, Milwaukee, Wis.

Complete Dispersion of Two Great Percheron Studs---60 Head

Comprising the Studs of Louis Lewellin and Sons, Waterloo, Wis., Lewis P. Sutter, Delavan, Wis.

SALE CALLED AT 10 O'CLOCK A. M.

THE L. P. SUTTER OFFERING

CONSISTS of a high-class lot of **imported stallions** and mares. These horses were personally selected in the famous Percheron horse breeding districts of France and imported by Mr. Sutter in 1914 for his own private stud purposes at Delavan, Wisconsin. **The stallions** are coming four and five. They are the **big, ton kind** with **tremendous bone** and **substance. The mares** are coming four, and under. Only two over five. They include a nice lot of big, drafty animals. The colts in the sale will show the kind they are capable of producing. It's an exceptional opportunity to buy **imported** Percheron stock, very little of which is now on the American market. **By all means come and look them over on sale day.** You will find something to suit your wants. Don't miss the sale.

THE LEWELLIN & SONS OFFERING

THIS offering consists of a grandly bred lot of **home bred** stallions and mares, the result of **years** of careful selection and mating at the Lewellin Percheron studs at Waterloo, Wisconsin. Also two grand **imported** mares. This offering requires no introduction to the Wisconsin horse breeding public. Its frequent appearance and **successes** at the **Wisconsin State Fair** have made it well known to every horseman in the state. In 1915 and 1916 it won the **Wisconsin bred and owned championship** on stallions, and also on mares; and in 1915 the **championship on mares** in the open to the world classes. Besides these, it has won many first and second prizes both in singles and groups. All of these prize-winning mares, stallions and colts are included in this sale offering. They are proven quality and regular producing stock.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

Bull for sale is well grown, of good type, well marked and ¾ white. Send for extended pedigree and price.
UPLAND FARMS, E. E. Ayer, Prop., J. H. Travis, Manager, **WALWORTH, WISCONSIN**

Purebred Registered HOLSTEIN CATTLE

The scope of its labors and the numerous details involved in the administration of the affairs of the Holstein-Friesian Association are best comprehended by a consideration of the fact that, during the fiscal year ending April 30, 1916, $158,994.50 was received by the secretary's office for the registration of pedigrees and for transfers. This volume of business required 46,760 entries in the cash books, and the issuance of 142,120 certificates, and this prodigious labor is demanded for the conduct of but one department of the greatest dairy cattle breeders' association in the world.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

HOLSTEIN-FRIESIAN CATTLE.

HOLSTEIN BULL CALVES

WITH

BREEDING, CONFORMATION, HEALTH *and* VIGOR

Out of high record A. R. O. cows. Senior sire, King Pontiac Champion by King of the Pontiacs, and out of a 31-pound dam. Now has over 45 A. R. O. daughters. Junior sire—

Korndyke Segis Johanna, whose two nearest dams average over 39 pounds.

Pabst Stock Farm, Dept. 30, Oconomowoc, Wis.

A COMBINATION OF SIZE, IDEAL TYPE AND PERSISTENT PRODUCTION

A 31.02-POUND bull, that comes from a long line of cows of large size, ideal type, heavy-production ability, which are persistent. **Racine Johanna Piebe Mercedes 188460.** Born December 8, 1915. His dam, **Ella Mercedes of Elm Court, made 31.02 pounds of butter in seven days;** 130.47 pounds butter in 28 days (an average of 32.69 pounds butter per week for four weeks); 829.78 pounds butter in a year. She weighs over 1,600 pounds. **His sire's dam** made 27.70 pounds butter in seven days; **808.82** pounds butter in a year and weighs close to 1,600 pounds. His dam's dam, sisters and his parents' sisters are big cows of good type and heavy producers. Come to our farm and see them—and see the kind of cows his daughters will develop into. Am also offering a straight and well-grown yearling heifer out of Lady Johanna of Elm Court and sired by Count of the Pontiacs.

RUEBEN KLOFANDA **RACINE, WISCONSIN**

REGISTERED HOLSTEIN BULL CALVES

J. A. FORGE **BURLINGTON, WIS.**

On the Milwaukee and Soo R. R. and Electric from Milwaukee.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - **WAUKESHA, WISCONSIN**

HOLSTEIN BULL FOR SALE

Ready For Service

BORN January 1, 1916, sired by a proven son of King Segis De Kol Korndyke, sire of the first 40-lb. heifer and brother to the sire of the $50,000 bull and the $35,000 bull. Records of his dam and two nearest dams of his sire average butter, 7 days, 29.44 pounds. He is a good individual, a trifle more black than white. Priced right for immediate sale. Address

$195 Converts Your Ford into a Guaranteed Powerful Staude Mak-a-Tractor

Drive It 24 Hours a Day If You Need It; It Will Always Do the Work

The Staude Mak-a-Tractor is the most economical, most efficient, most remarkable farm implement you can buy. It gives you four horse working ability at one horse cost, and it costs nothing when it is not running. It is a proved success all over the country. Tested under all conditions of farm work by owners who say it is the most wonderful implement they have ever used. It has hauled 9,200 pounds of wheat up into a farm elevator on high gear—pulled a 40 x 60 Minneapolis thresher, the largest size made and weighing 10,000 pounds, in a stubble field on high gear—moved a 25-ton story and a half house on trucks over dirt roads.

It is always ready, day and night. In the hot harvest weather when horses drop dead in the harness, it will do its work continuously 24 hours a day. Use your Ford headlights for night work. Anyone who can drive a Ford can drive Staude Mak-a-Tractor.

Breaking virgin sod, 7 in. deep with 2 bottom, 28 in. gang. (Reproduction from moving picture film.)

20 Minutes to Install

Mak-a-Tractor attachment clamps on a Ford with four bolts. No holes to bore. Rear wheels replaced with driving pinions—integral with brake drum. To change back to touring car, merely loosen and roll back Mak-a-Tractor axle and wheels—replace driving pinions with Ford wheels.

Mak-a-Tractor frame removable in five minutes. Can be left on car—scarcely noticeable—weighs but 50 lbs.—does not affect appearance or interfere with spring action.

11 Fords in 1

Greatest draw-bar pull for weight ever built. Greater strength in every unit of construction in proportion to work and weight required than any other tractor. Gear reduction (in Mak-a-Tractor itself) increases Ford power eleven-fold—reduces speed proportionately.

No Strain on Engine

Staude roller pinions integral with brake drum replace rear wheels of Ford. Mesh into semi-steel gears on tractor wheels. Power applied near outside rim of tractor wheels—no torsional strain on hub or spokes. Mak-a-Tractor is back of Ford axle—exclusive construction. Driving pinions push the tractor wheels down—no power wasted. Ford does no pulling. Mak-a-Tractor necessarily pushes car ahead of it, since all moving power must come from contact of rear wheels with the ground. With Mak-a-Tractor attachment **Ford starts on high and runs on high all the time**, proving conclusively that there is no strain. Motor speed is never more than the low speed of 1,000 revolutions per minute in low. Same speed as when touring car is making 20 miles an hour—safe, economical speed for motor.

Patented Force Feed Oiler

Wonderful patented Force Feed Oiling system to motor bearings—same as high-priced cars. Installed in a few minutes. Possibility of burned-out bearings—scored pistons—lubrication difficulties eliminated both from touring car and tractor.

Self-Cleaning Gears (Patent Applied for)

Gears in the Staude Mak-a-Tractor wheels are self-cleaning, an exclusive feature of great value. It saves in wear—prevents breakage of gear teeth. Gravel, stones, dirt of all kinds are automatically removed from the gear teeth. The Staude Mak-a-Tractor runs as quietly and smoothly as a motor car.

Staude Concave Creepers

18 Special Staude Concave Creepers are furnished for each wheel. These may be bolted through the tractor wheel rim when equipped. The concave cutting edges dig into soft soil or sand and give maximum pulling capacity. Special feature. Ordinary, flat-edged creepers ride over the soil—waste motor power by making the engine "pull up hill."

Staude Ford Radiator—Extra Large

Driving at slow speeds a motor heats up much faster than at high speeds—a smaller volume of air passes through the radiator. A tractor operates at slow speeds. So we provide a special Staude Ford Radiator—cellular type—six times more efficient than Ford. It should be left on the car permanently—it's the best Ford Radiator ever built. And it is a guarantee of perfect cooling both for tractor and touring car.

Cold Rolled Steel Axle

The Special Staude rear axle is 2 inches in diameter, made of cold rolled steel. Tractor wheels run on roller bearings. All the pulling is done by the Staude Mak-a-Tractor attachment itself. No extra load is put on the car chassis. The hitch is on the rear axle where it should be and may be moved from one side to the other without interfering with the steering or causing side draft. The hitch is 38 inches wide, giving a broad range of positions to meet every hauling requirement.

Special Fifth Wheel Job 2½ to 5 Miles Per Hour

Special Fifth Wheel attachment for receiving ordinary farm wagon bolster and reach furnished at slight additional cost. Gives perfect tractor construction for hauling heavy loads. Special pinions give speed ranging from 2 1-2 to 5 miles per hour.

Harvesting wheat in July 1916. (Reproduced from actual photograph.)

Utilizes Tremendous Power of Ford Engine

Staude Mak-a-Tractor utilizes the wonderful power of the Ford engine to turn two tractor wheels. The tractor attachment, itself, does all the actual pulling work. There is absolutely no unusual strain on the working parts of the Ford. The Ford rear axle drive shafts merely turn the pinion gears of the Staude Mak-a-Tractor. These gears mesh with the tractor wheel bull gears and turn the wheels under.

We positively guarantee that any Ford in good condition used with a Staude Mak-a-Tractor will start and run continuously on high gear and will do the work of four horses. Sixteen years of square dealing is behind this guarantee. Ask your banker.

Staude Mak-a-Tractor gear reduction reduces the speed of the Ford eleven times and gives an eleven-times increase in pulling power. This is the reason for the wonderful working ability of the Staude Mak-a-Tractor. It gives greater actual pulling power for the weight than any other farm implement ever built.

The Staude Mak-a-Tractor does not strain any part of the Ford, regardless of working conditions.

First—It uses less than half the Ford power.

Second—Motor speed is never over 1,000 R. P. M., equivalent to twenty miles an hour as a touring car.

Third—It starts on high gear—cannot strain the differential.

Fourth—Staude Mak-a-Tractor carries the rear of the Ford and end pushes the Ford ahead.

Hauling 125 bushels farm wagon, using fifth-wheel attachment.

Wonderful Cooling System—Remarkable Oiling System Included

Every service detail has been carefully worked out. The wonderful Staude Ford Radiator, furnished as regular equipment, has six times the cooling efficiency of the Ford Radiator. Leave this on permanently. It guarantees perfect cooling for touring car and tractor both. We wouldn't think of selling you our Tractor attachment without this increased cooling capacity. Without it no tractor attachment can give satisfactory results. The new force feed oiling system, also regular equipment, gives positive feed to all motor bearings through a side gauge on the dash.

With this wonderful cooling system, this remarkable oiling system and a motor speed which never exceeds 1,000 R.P.M. under the hardest work, the Ford motor used with Staude Mak-a-Tractor is more serviceable, more efficient, more durable even than when it is used in the Ford touring car at no increased cost.

Use Any Ford You Can Get

If you have no Ford, get a cheap second-hand one. Clamp Staude Mak-a-Tractor on in twenty minutes, get the lowest farm power in the world and the most efficient tractor you can buy. And save the cost of your Ford and your Staude Mak-a-Tractor in the first month you use it.

This Wonderful Book Free

Get our wonderful farm book, "Reaping a Golden Harvest." It's a real, scientific, carefully edited explanation of how farmers are opening the way to bigger crops, bigger earnings, greater savings and vastly improved land by using Staude Mak-a-Tractor. It is jammed full of information that means real money to you. And we will send it to you FREE. Fill out the Coupon.

Send Coupon NOW Only 20,000 Staude Mak-a-Tractors will be built this year. There will not be near enough to supply all farmers. Ask at once to avoid being disappointed. Only those who order first can be favored. Send the Coupon NOW—QUICK. Read the startling big Book. See what the Staude Mak-a-Tractor is doing for others—what it will do for you. Then see your local dealer and arrange for a demonstration on your own farm. But mail the Coupon NOW.

THE WISCONSIN FARMER

VOL. XLVI. NO. 9. THURSDAY, MARCH 1 1917. WHOLE NO. 1331

Making Apples Pay Every Year.

MR. G. H. TOWNSEND, of Richland Center, does not make any improbable claims as to production on his apple farm in Richland county, but his yields show that his trees have been working in the years when other orchards were enjoying a rest.

Growing apples in the favorable seasons only is no special accomplishment. Neither is it a profitable practice. The profit in apples—or any other fruit for that matter—is during the off seasons. If a person is successful, therefore, in the unfavorable years, he does not need to worry over the next season's expenses. Idle land is an expense and many orchards are idle every other season.

In 1912 the apple production of Richland county was 25,000 barrels, of which amount his place produced 2,200 barrels. In that year apples were plentiful and cheap, but not so in the following year. In 1913 the entire yield of the county's apple trees was 2,000 barrels. Of this amount the Vista Ridge Fruit Farm—as he calls his place—produced 750 barrels. That is one-third of the entire crop of the county. In 1916 he again had a large crop—1,600 barrels—while other farms showed a very low yield. In speaking of his success, Mr. Townsend said that too many people do not realize that it requires three years to grow an apple. Commencing with the first year that the trees are able to bear fruit, the tree must grow branch wood, or, as it is termed, "new" wood. Then the following year come the fruit spurs, and the third year the apples. This process is continuous when conditions are right. When they are unfavorable to the development of any one of these, the crop in the following season is small, or there is no crop at all. The failure to recognize this is the reason why many orchards bear only once every three years and in some cases fail to grow any crop at all.

The new wood is encouraged by moisture. An apple soil must not be too heavy or too sandy. Too much moisture hinders the action of the soil bacteria, that transform the simple chemical elements into available elements for the plant. Moisture keeps out the air and plants do not root deeply in wet soil. The growth or development of a tree is often interfered with during a season, just because there is too much moisture for the tree. If, on the other hand, moisture is not sufficient, three things may happen: Should the tree be bearing much fruit, there will be but little growth of "new wood" and only few, or no fruit spurs, will develop—the apples may not mature or drop before maturity, the tree may kill from the lack of moisture, or may winterkill by freezing dry. The best soil is, therefore, one that will contain water in the right amounts. Such a soil is a clayey loam, containing some gravel. Richland county is well provided with such soil. Being a continuation of the Baraboo range of hills and ridges, it has an altitude of 300 to 500 feet above the level of the lower Wisconsin river, and between each range of ridges is a large creek, carrying off the surplus of the water from the hillside. The valleys operate as catch basins for the cold air of late spring and the early autumn frosts.

Mr. Townsend does considerable spraying, starting early in the season and continuing until August.

G. H. TOWNSEND, RICHLAND COUNTY, WIS., APPLE GROWER.

The trees are examined before the buds open, and in case any scab is discovered, a mixture of one gallon of lime sulphur to eight gallons of water is sprayed on. If the trees are clean, the first spraying is not done until the petals are falling, the solution used in this case being considerably weaker—one to forty. From then on the trees are kept covered with a light coat of the one-to-forty solution—applications being made after each rain. As a rule, a dry April means that the scab will put in its appearance late in the season, and a wet April is indication that the scab will show up sooner. Protecting the tree from parasites means that the proper development of the foliage will take place. When the foliage cannot develop fully, or when the tree suffers from defoliation before the season is over, the fruit buds—the second stage of apple growth—also suffer, and this, according to Mr. Townsend, is the reason why so many orchards do not bear more regularly.

In varieties grown on Vista Ridge Fruit Farm, the Duchess and Wealthies and the Northwestern Greenings lead. The Jonathan and Winter Banana have also made good yields. The McMahan is a Richland county product and is well represented in the orchard. Growing so many varieties is not the best policy, but Mr. Townsend bought this orchard of mature trees, and, though he is not excusing the mistake of his predecessor, he is trying to make the best of the situation. He treats each variety according to the needs and gets exceptional results and makes all the profit that is possible under the conditions.

Mr. Townsend is strongly in favor of efficiency methods in the orcharding business. He does all he can to assist his help in making the work less cumbersome. For this reason he also devised a ladder that could be used during the harvesting of the crop, to meet the loss of time adjusting ladders to uneven ground, and to prevent pickers from knocking down apples putting ladders up into the trees. The ladder has adjustable legs, pivoted to clips, that are pivoted to a band link which swings up and down, and also slides back and forth on a cross rod between the sides of the ladder.

The general plan of the link, clips and mounting is shown in the accompanying drawing. The adjustable legs may be spread as widely at the bottom as desired to brace the ladder, and are held by passing through a link pivoted to a cross bar attached to the base of the ladder. The band link on the cross rod swings, so that when the ladder is lifted, the legs drop enough to loosen the legs in the links on the cross bar, when the ladder is set on the adjustable legs and raised to a vertical position, the legs automatically adjust themselves by pushing the bank link on the cross rod enough to shorten the leg on the high side and let the leg down on the low side, so that the ladder automatically adjusts itself to level ground, bumps, holes or side hill and locks by sliding the leg holders down the adjustable legs.

For short ladders—ten or twelve feet—a third leg is added. It contributes to safety and saves its cost in time and fruit in a few days' use.

Mr. Townsend has not always been in the orchard business. He is by profession a lawyer, but, having found many features in this occupation that were not to his liking, he decided to go back to the work of his forefathers, who were fruit growers in Ohio. About four years ago he took over the present farm, and found there an orchard of some forty acres, growing twenty different varieties of apples. The farm consists of about 100 acres in all. Mr. Townsend does not try to run more than the orchard part, and is slowly developing the rest of the

RICHLAND COUNTY ORCHARD READY FOR THE PICKERS.

Thousands of Satisfied Users

Testify to the efficiency and economy of the Caloric Pipeless Furnace. We've a book of letters written by people who once struggled to keep warm with stoves or old-fashioned heating systems and who finally installed the one-register Caloric. The satisfaction these letters express is absolutely convincing. Here is one that is typical of many:

"I have a large three-story, eleven-room house and can show 72 degrees in third story rooms before 7 A. M. The Caloric produces more heat from less coal than any other kind." MAHLON FRETZ, Sellersville, Pa.

This is concrete, direct-to-the-point evidence. It establishes the

PIPELESS CALORIC FURNACE

The Original Patented Pipeless Furnace

as the most sensible and economical furnace built. Why not install one in your own home, add to your comfort, lessen your labor and cut your fuel cost? This can be done without inconvenience at any time.

The Caloric heats from *one register*, so there is only one register hole to cut. Saves 35% of fuel because its heat is direct, and because a patented triple casing prevents radiation into the cellar. There is no furnace in the world so easily installed as the Caloric or so absolutely satisfactory. The original pipeless furnace is backed by a broad guarantee.

There is a Caloric dealer in your town—see him soon. If you do not know who he is, write us and we will tell you.

Let us send you a free booklet containing our remarkable guarantee.

land for nursery purposes. About twenty acres are in small fruit. Last year he set out 3,000 vines, which he hopes to develop into a profitable undertaking. Some experimental work is being done in developing successful new strains of plums. Professor Hanson, of South Dakota, had considerable success with crossing the native plum and sand cherries, and Mr. Townsend is further developing these. Another cross which is very promising is the apricot cross with the native plum. This was first successfully done by Mr. Burbank, of California, and strains from his production are now being planted in many parts of the United States.

Ladder used in Buena Vista orchards.

At the exhibits at our state and some of the county fairs, Mr. Townsend has won his share of the prizes. He is also connected with the State Horticultural Society of Wisconsin, and a similar body in the state of Minnesota.

Novel Prize For Winning Boy Judge.

Shropshire interests in eight states of America will gain some young boosters by the plan which has been determined upon by the association at its last meeting. Wisconsin is one of the states which has this opportunity. The boys' judging contest held in connection with the Wisconsin State Fair will have as an additional honor to be won this year the prize of one share in the American Shropshire Registry Association valued at $100. In order to obtain this the boy must be first in the judging of Shropshire sheep. Only boys who have never judged sheep at fairs and similar contests will be allowed to enter. Arthur Broughton, president of the Live Stock Breeders' Association of Wisconsin, is also an executive officer of this sheep organization and he is enthusiastic over the plan. The Shropshire association is one of the largest organizations in existence. With the price that sheep have brought during the last years and the profits that have been realized by the men who have foresight to go into the breeding and feeding game during this time this ought to prove one of the most popular prizes ever offered. The same offer is made for the state fairs of Illinois, Indiana, Iowa, Michigan, Minnesota, New York and Ohio.

Sheep and lambs raised and fed on Wisconsin farms are sharing, to a great extent, in many of the record deals on what is now called the "animated market" at the Union Stockyards, Chicago, history-making quotations being of daily occurrence.

Here are a few specimen deals made recently by Wisconsin stockmen on the Chicago market, obtained through data furnished by the Wisconsin Live Stock Breeders' Association:

One lot of prime fed western lambs were sold by Clark and Baker, of Waterloo, for $11.60. Reporters state that these lambs were "in a class by themselves."

Syver Hollan, of Iowa county, disposed of seven native ewes last Thursday, at an average weight of 158 pounds, for which $11 a hundred was paid. At the time, this quotation topped the market, and is said to be 25 cents in advance of any previous record of ewes handled through one of the yard's oldest commission houses.

The only lambs to sell for more than $14.50 in the history of the sheep trade up to a few days ago, were shipped in by Onalka Pickle & Canning Company, of La Crosse county. There were 216 head in the lot, averaging eighty-one pounds, and going down at $14.55.

The Wisconsin Farmer

THURSDAY, MARCH 1, 1917.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

WISCONSIN'S OPPORTUNITY IN THE GREAT NORTHWEST.

I WAS very much interested by the address of Mr. F. R. Crane, director of the agricultural extension department of the Great Northern Railroad, before the Wisconsin Farmers' Course at Madison, on February 8th, in which he showed the splendid market for Wisconsin dairy and beef stock which exists in such northwestern states as North Dakota and Montana.

That these states are not so far advanced in the development of the live stock industry as our own state, of course, goes without saying. They are comparatively new states, with all the ambition and energy of youth, looking to such older, more developed states as Wisconsin for help and guidance. We not only owe a duty to them to serve them as best we may in developing their agricultural resources, which, though vast and rich, have hardly been scratched on the surface as yet, but we will find this policy a most enlightened form of selfishness, which will pay us good returns in dollars and cents.

Just as Wisconsin looked to eastern states and the older countries across the sea for the start of its magnificent herds, so the people of the Northwest look to us for breeding stock with which to grade up their cattle and hogs. That Wisconsin has already left its imprint indelibly on the agricultural industry of the Northwest is shown by the increasing number of pure-bred cattle and hogs which are being shipped yearly from this state to North Dakota and Montana by the carloads; of splendid grains, originated by our farmers, which have gone into these states during the last half dozen years, and by the annual visits of delegations of farmers from these states to our agricultural college, where they have received the inspiration which comes from contact with the life of this splendid institution and have left the freshened outlook which comes from becoming acquainted with men and conditions in other states.

Mr. Crane sounded a timely word of warning when he said that Wisconsin stockmen should not try to palm off their discards on northwestern buyers, for such a policy will surely react and kill the goose which would otherwise lay many a golden egg for this state. Good business as well as good morals, which are more often the same than we sometimes realize, would condemn any such short-sighted policy. Wisconsin has a reputation of having the finest herds of any state in the Union, and it is up to you and me, my friends, to maintain that reputation in all its glory, that not a single act of ours may tarnish the name which she has won through merit.

The Northwest is calling us to "Come over into Macedonia and help her." Will we not respond? In these days of struggle and competition for foreign markets, will we neglect the opportunity close at hand, that is knocking at our doors, not once, but continuously? I am sure that every Wisconsin reader of this paper will be glad to pass along, to the farmers of the Northwest, the benefits which in an earlier day we received from older communities; that you will take joy in doing your part in the upbuilding of a substantial farming prosperity in those states commensurate with our own; and that you will heed Mr. Crane's worthy appeal and sound advice, when he said, "The Northwest needs your assistance; it needs your surplus stock. We cannot use your discards, but we are willing to pay top prices for top stuff." Surely there is an opportunity for service, both to others and ourselves, that will appeal to the best in all of us.

TIME IMPORTANT TO WISCONSIN FARMERS.

I AM impressed by a remark of one of our Wisconsin speakers during Farmers' Week. He said: "Time is the only form of wealth which is parcelled out equally to all." I believe my friend who quoted this remark credited it to some French writer. Up to the time, the quotation had escaped me. But how true it is? Can anyone tell me who has a corner on time? Can anything or anyone, save the grim reaper himself, rob us of that precious capital we call time? What would money or health or prestige or fame, or any form of earthly wealth be worth to any of us, my friends, without time? Everything we do, everything we say, takes time.

I cannot but feel that the conservation of time is especially important to farmers, such as we have in our beloved state of Wisconsin. This is not a "one-idea" or "one-crop" state. I can see some reason for the farmer in the wheat belt, with his "eggs all in one basket," taking a little time off while nature does the biggest part of the work. But such a condition fortunately does not exist in Wisconsin, and the element of time enters more closely into profits and happiness in a state where we must be up and doing all the day—and, I must admit it—sometimes into the night. When a man must be up at four o'clock to begin milking the cows, I feel sure he knows pretty well that time is worth something. And these cows must, of course, be milked again in the evening, and here we improve more of our time. Neither can we expect to let all of the time between milkings go to waste. The daylight hours must be improved, most of them by work, some of them by recreation and study.

Shall we not all do our level best to earn good dividends on the wonderfully precious asset, time? I have heard so many sermons against waste of money and talent. Why not more sermons against the waste of time? If we give up our money we expect to earn interest. We look out very carefully to see to it that money does earn interest, and that we collect regularly. Do you keep such books on time, my friends? Did you, my friend and reader, ever sit down with pen or pencil and figure how many days or hours you have at your disposal during the coming season for crops, and how you can employ this time most profitably?

I must advise that to conserve time, planning is necessary. Doing every chore on the farm by hand is wasting time. Walking back and forth from markets is wasting time. Carrying wheat to the mill on your back is wasting time. Forcing the wife to carry water from the well is possibly saving a little money, but it is wasting time. It will not be long until we realize that milking cows by hand, or plowing in the old way with nothing but horse power, is wasting time. Putting fat on a hog or a steer is profitable, provided we don't take too much time doing it. So, a careful study of best rations may be saving a lot of time.

Time is as much, or more, an important element of success in farming than in any other occupation. Delay planting or sowing too long and the crop is ruined. Things must be done in time—on time—as we usually say it. I exhort every reader of The Wisconsin Farmer to take an invoice of his time. The time you lose is worse than bad debts. You can't even put lost time into judgment and hope to collect at some future day. Even though you may be young and feel you have a lot of time to your credit, you cannot afford to waste a minute of it.

Please understand, my friends, that improving your time doesn't mean drudgery. The right amount of pleasure is life's lubricant. It always saves time to keep the machinery well oiled and in perfect working condition. Your greatest asset, and mine, for 1917 is time. Whatever we do, let's make every lick count.

COUNTRY CHURCH PROBLEM IN WISCONSIN.

ONE of our Wisconsin rural problems is to keep the country church alive. Shall I tell you a story I heard recently about a country church which was kept alive for thirty years, and which is still enlarging its usefulness and helping to send better young men and young women out into the world?

The setting of this story, my friends, is back in Ohio, and the time of its beginning was soon after the war between the North and the South. In those days the country down along the Scioto river in southern Ohio was in pretty poor shape. Farmers scarcely ever saw a dollar, much less could call a piece of real money their own. The flower of young manhood had been spent in the war. Some of it had been blotted out forever. Many men wore the old blue uniforms, ostensibly to show their loyalty, but quite as often because they had no other clothes. Crops were raised on the farms, but they could not be exchanged for money. Wheat was still cut and gathered with the cradle, and taken in a sack thrown across the family horse and carried to the mill, where there was a long wait for it to be ground into flour. Money was scarcer than Christians among the Zulus. Crops were traded at the country store for sugar, salt, coffee, tobacco, calico and denim. About the only difference between the Sunday-go-to-meetin' toilet and the everyday clothes was an extra douse of water from the spring or a little added rubbing with soft soap. The good folks about whom I write lived twelve miles from the nearest village—twelve miles as the crow flies, but if you or I had to make it over the hills and through the valleys these days in a lumber wagon with a work team as the motive power we would think it was a hundred. I well remember the teams in those days were not like the splendid blooded horses we have in Wisconsin today. Down in the hills of southern Ohio in the late '60's a horse was a horse and a cow was a cow, and no one knew much about pedigrees or blood lines.

It was a good Christian mother, rearing a family of twelve children, away back in the hills of Pike county, Ohio, who decided one day that they must have a church. Fighting to get enough for her brood to eat and wear, this woman did not forget that the soul as well as the body needs attention. She persuaded her husband to deed four acres off the corner of the farm for church property. A cemetery was platted, stake-and-rider fence built about the grounds, and then a call was sent out for a church-raisin' bee. I know you have all heard of a barn-raisin'. Well, this was just the same sort of a job except that the building to be erected was a church. Most of the folks who came to this church building bee were relatives of the good woman who was back of the movement. She was the architect, the boss carpenter, and the decorator. Out from somewhere in hidden socks or pantry shelves, came enough money to buy a pulpit, which was brought up on the boat from Cincinnati, and carried overland, a day's journey in a lumber wagon. This same woman, heroine of our story, rode twenty miles to the county seat to secure the services of a preacher. In those days one never heard of ministers, or pastors. Men who preached the word of God were preachers. The church for thirty years never had a choir. It was this same good woman who took the tuning fork every Sunday, and reading a couple of lines at a time from the only hymn book available, led the singing. The preacher could come only once a quarter, for many years, but this woman director arranged for Sabbath-school every Sunday. She did the teaching herself and the youngster who didn't master his portion of the catechism went to the meeting house with fear and trembling. But he went just the same. Families came to church from far and near, often man and wife and the children (sometimes one or two babies would have to be carried) walking across the hills or over the rough roads. The hitching racks were always lined with teams, rain or shine. Sometimes a baby died and the preacher could not be gotten hold of. There were no telephones or automobiles in those days. But the babies were always buried with religious ceremonies whether a preacher could be found or not. This saintly woman would sing one of the great old tunes of church history over the bier; she would lead the sorrowing ones to the grave; she would place her arms around the bereaved mother and call upon God to sustain them both. My friends, this woman had no license to preach, neither did she claim any special gift from heaven, but her great, wonderful soul communed with the angels and she ministered as best she could.

And what do we find as the result of the efforts of this one woman? The good which followed her example is incalculable. Many ministers went out from this country church which never had a home or a foreign missionary society. The one grog shop along Camp Creek was closed for want of patronage. Children and grandchildren grew up under the benign influence of this country church, and the woman who had started it all was the leader until she could no longer "rise and take her part." I think it is in the Psalms where this significant verse appears:

> There shall be an handful of corn in the earth, planted on the top of the mountain, but the fruits thereof shall shake like Lebanon.

Shall we not see the lesson of this story as it applies to our Wisconsin rural church? Where we find men or women who will make sufficient sacrifice we will find country churches. Country churches, regardless of all the sociologists may say concerning them, are built and sustained on individual devotion. Does not the verse from the Psalms, which I have quoted, teach us that we need not be discouraged with small beginnings? What more insignificant beginning could we imagine than a handful of corn, and what less of promise than this handful of corn planted in the thin, rocky soil on the top of the mountain? And yet the "fruits thereof shake like Lebanon." I often tire of statistics and theories about the country church and say to myself that country churches will not die when there are good souls, devoted to their religion, who do not intend to let the churches die.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

MEMBER AGRICULTURAL PUBLISHERS' ASSOCIATION. MEMBER OF AUDIT BUREAU OF CIRCULATIONS

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance. $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Value of Wisconsin Crops Per Acre.

The final statistics on the value of crops in 1916 present some figures which are very encouraging to Wisconsin farmers.

Take, for example, the value of corn per acre produced in several important corn states. In Wisconsin corn produced was worth $32.40 per acre. While Iowa produced several times as much corn as Wisconsin, the value of corn per acre was only $28.47. This means that every acre put into corn in Wisconsin was worth $4 more on the average than the average acre put in corn in Iowa. In Indiana the average value of corn per acre was only $25.46 and in Minnesota the average was exactly the same. In Illinois, another great corn state, the value of corn per acre was $25.20.

The following statistics are taken from the recent report of the United States Department of Agriculture covering the 1916 crop season:

BARLEY.	
Wisconsin	$30.60
Illinois	26.88
Iowa	26.26
Indiana	18.63
Minnesota	15.58
FLAXSEED.	
Wisconsin	$26.16
Iowa	22.80
Minnesota	19.80
60,000 silos on Wisconsin farms in 1916.	
WHEAT.	
Wisconsin	$27.59
Iowa	25.42
Indiana	19.43
Illinois	18.26
Minnesota	12.06
RYE.	
Wisconsin	$19.28
Iowa	19.21
Indiana	17.70
Minnesota	17.70
Illinois	17.51
Wisconsin leads in number of dairy cattle. Number January 1. 1916.	
Wisconsin	1,675,000
Iowa	1,391,000
Minnesota	1,210,000
Illinois	1,047,000
Indiana	672,000

The encouraging thing about this report is that the Wisconsin farmer may feel that he is reasonably sure of good profits. Of ccurse, we farm a little more carefully in Wisconsin than the average man in Illinois or Iowa does. We make use of natural fertilizers and in some instances good use has been made of commercial fertilizers. Wisconsin farms have been noted for years for good yields. It is because of this high production that our seeds are in demand in other states.

A Contest For Wisconsin Farm Women.

Continuing along the lines of its repeated efforts to serve the people of this great state, the Wisconsin College of Agriculture has recently been making some investigation of the needs of the Wisconsin farm home. What has been called a Wisconsin farm home competition has been fostered by the college and this competition has been in charge of a committee consisting of Arthur Peabody, state architect; Xenophon Caverno, president of the Kewaunee Utilities Company; John Williams, a well-known Waukesha county farmer; Mrs. Nellie Kedzie Jones, of Auburndale, Wood county, and Mrs. Adda F. Howie, of Waukesha. This committee recently awarded first and fourth prizes to Homer Keissling, Boston, Mass; second and fifth prizes to Robert Schmitz, Milwaukee, and third to Allan D. Conover, Madison. In commenting upon the designs submitted, the committee reported that, while they believe the competition will result in substantially improving the farm architecture of the state, the plans were really for country estate homes rather than for modern farm homes. On account of this fact the plans are not altogether practical for general use, especially for the average farm in Wisconsin.

However, this work has been an entering wedge toward the development of the very important feature of farm life. There is no question but what we are going to have better farm homes. The college of agriculture now proposes that a state-wide contest be held open to competition among the farm women. From this they hope to get some very practical ideas and The Wisconsin Farmer desires to give its most enthusiastic endorsement to such a plan. The details of this contest will be made known later and our readers will be fully advised. The Hemlock Hardwood Association, representing one of the great industries of our state, has agreed to furnish the necessary lumber to erect whatever shall be chosen as the model farm home. This same association has also agreed to furnish $50 to be used in cash prizes divided upon the basis of $25 for the first, $10 for the second and $5 for the third. A cash prize of $1 each will be given to the next ten plans which are judged meritorious.

The Wisconsin Farmer hopes that the farmers and farm women who read this paper will have given this matter some thought and that a very large number of them will take part in the contest as proposed. Certainly a great deal of good will result from this interchange of ideas concerning the farm home.

Wisconsin Short-horns in Demand.

A total of forty-nine animals averaging $232.50 were sold to buyers from fifteen counties in Wisconsin and two other states, Alabama and Tennessee, at a consignment sale of registered Short-horn cattle held at the college of agriculture February 15th. This sale was held under the auspices of the Wisconsin Short-horn Breeders' Association and a more complete report giving the price which each animal brought and the buyer will be found in the sale department of this issue.

In connection with the sale animals were entered in competition for prizes offered by the American Short-horn Breeders' Association. The secretary of this association, Mr. Frank W. Harding, of Waukesha, was present and gave a short talk on the progress of the Short-horn breed and Wisconsin's position in the production of beef.

There were sixteen consignors to the sale and all of these exhibited in the show for prizes. C. J. McMaster, of Altoona, Illinois, acted as judge of the show. The auctioneers were Carey M. Jones and Theodore Martin, well known in the live stock world.

The annual meeting of the Wisconsin Short-horn Breeders' Association was held in connection with the event, E. F. Jones, Rockland, and John L. Tormey, Madison, being re-elected president and secretary respectively. The association has a growing membership throughout the state and four county associations, those of Rock, Buffalo, Grant and Sauk, claim affiliation with it.

A feature of the banquet which followed the regular meeting was the presentation of the association silver trophy to Alvin Morley, Baraboo, winner of the Wisconsin Live Stock Breeders' Association boys' baby beef contest in 1916, and whose steer also won high honors at the International Live Stock Exposition, Chicago.

According to the official count, there are now 650 stockmen in Wisconsin who own pure-bred Short-horn cows and heifers, which virtually means that there are equally as many pure-bred herds started on Badger farms. Many other farmers possess pure-bred Short-horn bulls and are using them to grade up their stock to better standards.

The Short-horn business in Wisconsin is enjoying a healthy growth and the coming year promises to see even a greater demand for good breeding stock.

Attend to Your Subscription.

With another season's farming activities about to start, we wish once more to urge upon all readers of The Wisconsin Farmer that they attend to the important matter of their subscription to this paper before they become too busy. With every prospect indicating a year of increased acreage and increased production in the territory which this paper serves, we believe there is not a single farmer now upon our subscription lists who can afford to miss a single issue of this paper. That being the case, it is highly important that renewals be sent in promptly. Do not bother to obtain a money order or draft, but merely mail us your personal check without delay.

If every present subscriber will appoint himself a committee of one to see that some friend or neighbor likewise takes The Wisconsin Farmer he will not only be doing a favor to the friend or neighbor but also to ourselves, and will be the means of enlarging our subscription lists so as to make it possible for us to put all our plans for a bigger and better paper into operation this year. Renew your own subscription, secure at least one new subscriber if possible, and attend to either or both of these matters without delay.

Allowing Small Pigs Access to Tankage.

The so-called cafeteria system of feeding hogs embodies the principle of allowing the animal to balance its own ration. Excellent results have been obtained at several of the experiment stations following this plan and because of this many swine breeders are now using the system. The use of tankage has been freely advised not only for fattening hogs but even for young pigs, but a subscriber brings up the question at this time as to the advisability of allowing young pigs to have access to tankage in a self-feeder. This subscriber writes:

I would like to hear through The Wisconsin Farmer from those who have had actual experience in letting little pigs run to tankage in a self-feeder. Now I always feed tankage, but it is the general impression among the farmers here that it is too rich for little pigs and so I never let a pig have access to it until I think he will weigh about fifty pounds. I see, however, where a farmer claims to have let them run to tankage and would like to hear from him and others at what age is best to allow them all they will eat of it.

If the tankage is of good quality there need be little fear of young pigs gorging themselves or consuming it in an extravagant quantity. True it is that the growing pig needs considerable flesh-forming material and the little fellow will eat a much larger proportion of tankage along with corn than he will later in life. The one advantage of the self-feeding system is that a pig's requirements change from day to day and, therefore, it is impossible to compound a ration that will absolutely meet his specific needs. On the other hand, those who have had the most experience with this plan of feeding say that the pig will supplement his corn with just enough tankage to supply flesh-forming constituents and any attempt to compel him to use tankage in larger quantity will be immediately frustrated. This has been tried over and over again at the Iowa station and it has been found that the pig will separate even corn meal from the tankage in order to satisfy the natural appetite.

The plan of letting pigs have access to both corn and tankage from the very beginning until they are ready for market has been found to result in quicker gains and in cheaper gains than can be made by any other plan of feeding. If any of our readers have in their feeding operations experienced any trouble whatever when they have adopted this plan of feeding we would be glad, indeed, to hear from them.

Blue Grass Establishes Itself Slowly.

Where short rotations are practiced little attention can be given to such an important crop as blue grass. If, for example, we plant corn this year on a given field and oats next year along with timothy and clover, this to be followed by a meadow the third year and pasture the fourth, we are then ready to turn over this sod and prepare for another corn crop. This means a four-year rotation. By producing two crops of corn in succession we stretch it out to five years, but any such short rotation as this gives no opportunity for considering blue grass.

Within the last few days several communications have been received by this paper relating to the establishment of a blue grass pasture, and in one case it was stated specifically that it was not the intention to leave the field in grass more than three or at the outside four years. Under such circumstances we would not recommend the sowing of blue grass, as much better results will be obtained by simply sticking to clover and timothy.

Those who want to get a permanent pasture and who have in mind leaving it down for a series of years face an entirely different proposition and in such cases blue grass is one of the first crops to be considered. Those who have had no experience in undertaking to get a stand must be patient because it will be two or possibly three years before the grass becomes established. In the meantime something must be used so that good hay or pasture will be furnished and we are, therefore, face to face with the necessity of using the old-fashioned mixture of red clover, timothy and blue grass, these to be seeded along with an early variety of oats or, what is still better, with barley.

The thorough preparation of the soil in the spring is a good beginning because this means that the seed can be sown evenly and covered uniformly. Stalk ground should at least be double disked and so much the better if it can be harrowed twice before the seed is sown. An excellent plan is to sow the oats or barley at the rate of six or seven pecks per acre with a drill to which the grass seeder is attached so that a covering of the seed is brought about there and then by the operation of the drill. This plan throws the small seed between the spouts of the drill and, while some of it may be covered rather deeply, this difficulty can be overcome by going once over the surface with the harrow after sowing. Those who are not in position to use a drill will get good results by sowing the seed on a well-prepared seed bed and harrowing afterwards once or possibly twice. The disking in of seed is somewhat practiced, but in too many cases part of the seed will be covered very deeply and some of it may not germinate. Under ordinary conditions the harrow will afford sufficient covering.

An important item to be considered is the amount of seed to sow and here we run into a proposition upon which men differ widely. Exceedingly good results will be obtained by sowing, say four quarts of clover seed, four quarts of timothy seed and from eight to ten pounds of blue grass seed. From this mixture there will be a good, heavy clover meadow the first year with a slight mixture of timothy. The second year it will be possibly a half-and-half meadow, and, of course, blue grass ought to be showing up in good shape, but it will comprise only a small proportion of the hay crop. After the second year it will be found that the clover will disappear and the fight then will be on between timothy and blue grass, the latter finally taking possession because for conditions in this section it is the most persistant and, fortunately, the most useful of all our grazing crops.

The thing that we desire to emphasize especially is that patience must be exercised where an attempt is made to obtain a blue grass pasture. Fertilization will help and a top dressing of farmyard manure the second year after establishing the mix-

ture will be found to be very effective in stimulating the growth of blue grass.

Better Attention to the Corn Crop.

In the following communication an Indiana subscriber, Mr. W. A. Graham, calls attention to the importance of planting only such an area of corn as can be given good attention:

It is a fact that we are generally growing too light a yield of corn to the acre. Some have by better farming shown that it is possible to greatly increase the average yield of corn. As it has been done, others can do the same; and it should be done generally if that valuable farm crop is going to be profitable on our now high-priced land.

General conditions of farming and stock growing have changed so much and land is so much more valuable something must be done to try to secure greater yields of corn or else we cannot afford to grow it. I am aware of at least two great errors in corn growing that are quite universal. They are planting too many acres for the amount of help on the farms, and naturally, following this error, poor cultivation results. Better reduce the acreage than to carelessly cultivate the crop.

I do not call to mind anything that has so fully proved what the average soils of this state are capable of like that which has been demonstrated by the premium contests made in the one and five-acre plots of ground devoted to corn growing. These contests have proven what can be done, and they have been great educational factors for better farming. We take it that if one man or a set of men can accomplish great things by pursuing certain courses in corn growing, the same is possible for all similarly situated.

For instance, if one can by better fertilizers, employing higher grade seed, planting a better way, and then giving intensive, clean cultivation, get double the yield on similar soils to what a neighbor gets he is well worth imitating. We all know that rich, well-drained soil, seed that has been bred to high perfection, properly and timely planted, and then given thorough, clean cultivation, is bound, if the season is good to result in extra large yields of corn. Then why carelessly butcher in too great an acreage of corn on unmanured soil and follow this by careless cultivation? It is a losing proposition to anyone, and I write this to awaken better interest on the part of careless farmers, of which there still remain entirely too many.

Sod land (and the heavier the sod the better) is the kind to plant in corn. Therefore, a well-defined system of crop rotation where there is clover for two or three years followed by corn and the corn by some kind of small grain is what farmers should establish on their land. But, however, good the soil, use the best of seed and employ the best of clean and thorough cultivation.

It is unquestionably true that the central West could produce as much corn as is now being produced on a much smaller area if greater pains were taken in the handling of the crop. Much of our corn-belt land is getting more filthy all the time, becoming, as it were, fairly choked with annual weeds, and the only remedy for it is to cultivate more efficiently and more effectively. Our first mistake is generally made by allowing the weeds to get a start on the corn, and this, of course, is due to the fact that in many cases the last part of the crop is being planted at the very time that the first crop of weeds on the early planting should be destroyed. The secret of a clean cornfield is embodied in the principle that weeds must be destroyed literally before they become firmly rooted.

The English Sparrow as a Pest.

Much evidence has accumulated which goes to prove that the English sparrow is a nuisance, the bird being much more harmful than beneficial, judging from the character of its food. A recent bulletin published by the national department of agriculture contains evidence against the sparrow to bring about its conviction, and ways and means of its destruction are formulated in detail.

The sparrow is cunning, destructive and filthy, and it is only regarded as a useful bird in certain parts of the West where it destroys the alfalfa weevil. The examination of the contents of the stomach of sparrows in a large number of instances shows that it destroys beneficial insects, and, while it consumes weed seeds, on the other hand it also destroys grain. It is claimed that a flock of fifty sparrows requires daily the equivalent of a quart of wheat, so that it can be understood that the millions of sparrows even in a single state bring about a large annual loss. In addition, the sparrow attacks all kinds of fruits and it even destroys buds and flowers of cultivated trees.

But there is still another characteristic which the sparrow possesses that is of greater importance. Reference is made to its effect on reducing the number of useful and attractive native birds, including blue birds, house wrens, purple martins and tree swallows. The egg of these useful birds are destroyed and the young are frequently killed by the sparrows usurping their nesting places. Its enmity to the robin, the wren and many other birds causes them to desert certain localities and it, therefore, displaces insect-destroying birds, leaving in their place noisy, filthy little pests. All the evidence obtainable is against the sparrow and it is the opinion of the department of agriculture that every possible effort should be put forth to bring about the rapid destruction of this pest. This, it is claimed, can most effectively be done by destroying their nests at intervals of ten or twelve days throughout the breeding season. One case is cited where 20,000 eggs were destroyed in a single town of 4,000 inhabitants. A considerable number can be destroyed by providing birdhouses placed at a height of about ten feet, the birds to be captured and nest destroyed after dark. The plan of distributing a number of nest boxes in the orchard and among shade trees and outbuildings will greatly facilitate the movement of extermination. The shotgun is also effective in keeping down the numbers. Whatever method is used, preference should be given to those that exterminate rather than to those that simply cause the birds to move from one locality to another.

Farmers' Bulletin No. 493 outlines a number of systems of trapping sparrows and it might be worth while for our readers to send to the department of agriculture, Washington, D. C., for this bulletin. A good, live boy ought to be able to do away with a great many sparrows in one season and, while they multiply at an enormous rate, there is no question but what their numbers could be materially reduced in a few seasons by trapping and shooting.

THE FARMERS' WIRELESS,
A New Message of Peace on Earth, Good Will to Men.

Things Learned From Testing Seed Corn.

While the great bulk of the corn that will be used for seed this year is in good condition, it is nevertheless true that here and there losses will occur because men have taken too much for granted. It is doubtful if any man is justified in planting his corn without first making some sort of a test of its vitality. One of our subscribers, Mr. W. L. Haisley, makes a few suggestions in the following communication:

One season's work with a good seed corn tester will usually far more than repay the owner in the useful knowledge gained from observation of its results. Those grains of corn we plant in the tester usually bring to light a number of facts of which we were hitherto ignorant concerning the best type of ears to select for seed. A few little discoveries along this line at the right time will save many worthless or missing hills and make for a better quality of the yield. It does not take many bushels of corn to pay for a very elaborate tester and oftentimes a home made tester is fully as productive of good results as a very costly one.

Everyone realizes the importance of having hard, well-matured corn for planting of strong vitality, but we sometimes shell a few ears for planting of which we are rather doubtful. Seed ears are, of course, scarce and hard to find and it seems as though a few rather doubtful ears may not matter so much, as they have clear strong germs. In all probability if these ears were put to the test before planting their deficiencies would be so clearly defined that they would be discarded on the spot.

Last spring we got out some of the hardest, best-looking corn we had and started the tester in March. The germs were bright and clear, but the grains were still a trifle damp, as the corn had not been fire dried. That first lot did not test better than one ear to eleven that would sprout five grains out of five. These same ears were again tested after being fire dried for a week and tested 99 per cent good.

Yet out of the same ears that tested good on the second trial we discarded a number that otherwise would have gone through the planter. These ears were of rather good appearance and the germs were strong, yet the grains were somewhat chaffy. In sprouting the husk that had shriveled on drying began to stretch and became tough and leathery to a certain extent. These jackets refused to liberate the germs in many cases and these sprouts curled around inside in a vain attempt to penetrate the prisons. If planted in the open field they would have behaved in the same way and produced weak stalks at the best. This starchy grained corn that is too pinched on the ends will invariably do this thing because enough of the vegetable or corn oil is not present to soften the husk at sprouting. Only the plump, hard grains with a medium dent have enough of this oil and should be selected for this reason if for no other.

We can hardly agree with the conclusion reached by this subscriber regarding the sprouting characteristics of his chaffy corn. It is a fact that has been demonstrated over and over again that corn may be picked in the early dough stage, thoroughly dried out, and yet it will show strong germination test. Many excellent farmers have followed the practice of picking their corn so early that it shrivels and yet year after year they have a good stand of corn. The trouble in this case we believe was due to the fact that the germ had been more or less injured and it lacked the strength to push itself through the coating of the seed. In any event the discovery of this seed furnished a strong argument in favor of some sort of a testing plan. We doubt if there is a single case in the whole central West where men would be justified in putting out their acreage of corn without first making a test of at least 100 ears to ascertain the vitality of their seed. If seed from the entire 100 ears seems to be strong, then no further testing will be necessary, but if even part of it is weak then it will pay well to go through the whole supply so that the weak and dead ears may be discarded.

Marketing Farm Products.

Never in the history of this country has there been so much said and written about the farmer's need of a more economical and equitable system of marketing his products than is the case today. There is more than an academic interest in marketing. The nation as a whole is beginning to realize that there is something wrong when the consumer has to pay $1 for that which the producer is paid only 35 cents. The consumer is paying too much and the producer is getting too little. There is too much waste and efforts are being put forward to eliminate the waste.

John J. Dillon, New York state commissioner of foods and markets, has been giving considerable attention to our system of marketing farm products and presents the following direct scheme for getting the products of the farm into the hands of the consumer in a recent issue of American Review of Reviews:

The remedy for this condition is a direct, efficient, and economic system of distribution from the farm direct to the consumer through a terminal wholesale market system and the retail store. The plan of the New York State Department of Foods and Markets is to establish assembling rooms for food at the railroad in the local producing centers throughout the state. The producers under this system would organize into co-operative associations and they would own the market or assembling room. They would bring their products to this local packing house, as it comes from the tree or the ground, and an employe in charge of the packing house would grade and pack the produce, and, if located in a village or city, would supply the local needs and ship the balance in carload lots straight to a terminal wholesale market in the city. The food would be received in this terminal market by an auctioneer or salesman licensed by the state and operating under the supervision of the state, who would cause an inspection of the goods, make an open sale, and keep an open record of the receipt of the goods, of its condition, of its weight, of its price, and of the person who bought it. The sales would be made in quantities to accommodate the city retailer so that he could buy his supply direct from the agent of the producer, and, of course, the housewife would be supplied daily from the retail stores.

These suggestions are worthy of careful consideration. That they could be put in operation for the larger cities admits of no doubt if the proper co-operation from the producer could be secured. Note that provision for the retention of the retailer is made; that is as it should be. The legitimate retailer renders a valuable service and cannot be dispensed with, but the wholesale speculator is eliminated. Mr. Dillon believes that if such a system were put in force from 25 to 30 per cent of the cost of distribution would be saved. By dividing this between the producer and the consumer the former would be able to obtain a fair price for his products, while a considerable saving would also be effected for the latter. It is estimated that under a plan of this kind consumers in New York City alone would save annually from $150,000,000 to $200,000,000, while the producers who supply the New York market would be paid similar sums over and above what they now obtain. Going one step farther and applying this method to the whole country, the effect it would have upon national prosperity would be almost beyond computation.

It is evident that to put such a system into effect will be beset with many difficulties; it would, of course, be fought by the speculators who fatten upon the toil of the masses for which they render no valuable service.

Existing farmers' co-operative associations should study Mr. Dillon's plan, especially that portion of it relating to standardization of products at home. So long as farmers persist in not standardizing their products they will never make any progress toward a direct marketing system.

The Farmers' Open Forum
WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Ensilage From Grass to Grass.

To the Editor:—I will give you my experience about feeding ensilage sensibly. No fast and exact rule can be given that will suit all conditions. The item of most importance and to be kept uppermost in the mind in feeding ensilage is to commence feeding when the pasture season draws to a close and make it last till the cows are turned on pasture again the following spring. The farmer that has a small herd and plenty of ensilage till grass comes has no problem to deal with. The cheapest and best ration he can feed is all the ensilage the cows will eat without waste, supplemented with a grain ration to correspond with the amount of milk produced by each individual cow. I always feed some hay once a day and I think all will admit that cows do better if some dry feed, such as hay, straw or fodder, is fed, even if ensilage is fed heavily.

It should be remembered that silage is deficient in protein and feeds like cottonseed meal up to two or possibly three pounds per day per head of grown cows should be added for best results. Dry cows do fine and are in good shape in the spring when fed forty to fifty pounds of ensilage, two pounds of cottonseed meal and some straw or fodder daily. Cows that are milking heavily must be fed one pound of a good grain ration to every four pounds of milk produced daily for best results. Farmers are not all fortunate enough to have enough silage to feed as much as the cattle will clean up from early fall till grass comes again. I am in this class and I think a good many others are also. In this case a little judgment is needed. I always figure on having enough ensilage to feed until April 20th. My silo is 12x26 with a capacity of about fifty tons. The herd will run from twelve to eighteen head. The least amount I feed is twenty pounds daily. If the pasture is very short in the fall, like last fall, I commence feeding as soon as the silo is filled. That way it saves the waste on top and it is more economical than feeding green corn in pasture as the cattle will not eat the large stalks. It also saves time in feeding, as it does not take nearly so long to feed out of the silo as it does out of the field.

In my experience I have found that far better results are obtained by dividing the silage ration, so as to be able to feed it for five months at least, even if a small amount has to be fed daily than to feed heavily as long as it lasts and then feed dry feeds alone. This general rule will apply to the average farmer and small dairyman.

I never feed beef cattle, so I could not say how to feed them, but if there is a better way to feed silage to the average farm herd and small dairy herd, then I would like to know it. The system outlined above has given good results, but if I can do better I am willing to learn. F. L. Gregor.

Believes in Cow Testing.

To the Editor:—I, for one, can truthfully say that the cow-testing association has been a great benefit to me.

The first year I tested I was milking thirty-seven cows and heifers which were as good as any in the association. By keeping the best I had and buying the best I could get I now have a herd I am proud of. My herd this year is not as large as last, but even with the high cost of feed is making me a larger profit than the previous year.

Mr. Thrall's pure-bred Guernsey which won blue ribbon at the Ripon Mid-winter Fair.

I now have twenty-one cows in the test. For the month of January they produced 17,085 pounds of milk testing 4.64 and 792.4 pounds of butter fat. One of these twenty-one is a registered Guernsey heifer which I bought last summer and paid a big price for. She proved to be one of the most promising cows. I showed her at the mid-winter fair at Ripon last month and she took the blue ribbon under very strong competition.

I went to Waukesha and bought one of the best sires I could get. I had owned a full-blood sire for some time, but being encouraged by the way my cows were producing I wanted one with still better breeding.

I now have a herd of about sixty Guernseys, of which five are registered Guernseys, four females and one sire. The rest are high-grade Guernseys.

I have not brought about these good fortunes wholly by my own initiative. I owe many thanks to A. R. House, our official tester, who took a great interest in his work and whose interest has been an incentive to keep high-grade stock and better producers in our association. J. W. Thrall.

Winnebago Co., Wisconsin.

Which Do You Want?

OUR New Book on Subsoiling —written by practical farmers who tell, in their own words, how the subsoiling feature of the Big Bull Tractor increased their crop yields 10% to 33⅓%. Mighty well worth while reading, tells how to put money into your pocket. A copy is yours for the asking.

THE Monthly Tractor Bulletin keeps you posted on the latest developments in modern power farming methods and the new uses and achievements of the Big Bull Tractor. Every issue is chock-full of interesting and helpful information. Three month's subscription free.

"The Bull ... with the Bull"

is the most popular tractor in the world today—because of its many unique features—the subsoiling feature of the long spade lugs on the drive wheel which runs in the bottom of the furrow ("the best way of subsoiling known up to the present time," uses no extra power and charges nothing for its work) its low fuel and upkeep cost—its ability to work fast and continuously for many hours, day and night, without overheating, its self-steering device, its simplicity, accessibility and sturdiness.

Write us today whether you want the Subsoiling Book or the Monthly Tractor Bulletin.

THE BULL TRACTOR
Kerosene or Gasoline

A Powerful Light Tractor for Only

$585.00

Here's the little tractor with a big 1916 record. Its great performance in field and on belt has won hosts of friends—selling fast for 1917 use. Honestly built of high-grade materials—simple design and highest efficiency.

La Crosse Happy Farmer Tractor

Low in price—low in upkeep. Two models. Model "A" 8-16 h.p.—$585. Gasoline or kerosene. Pulls 2 or 3 plows. Model "B" 12-24 h. p.—$735—our wonderful new kerosene burner. Same type tractor as Model "A," economizing weight for pull. Unbreakable cast steel frame. Twin cylinder motor—overhead valves—perfect combustion—mechanically oiled. Hyatt Roller Bearings throughout.

Model B 12-24 H. P. $735.00

Write for catalog. Also ask about La Crosse Tractor-drawn implements. We have a distributor near you for prompt service.

The Tongue Three-Horse Hitch.

Practical Plan That Has Worked Out Very Well When Tested With Weights and Scales—By W. H. Boomer.

ONE of your subscribers recently asked about a practical three-horse evener to be used on a tongue. I am enclosing a sketch which has been found to work out in a practical way. This has been thoroughly tested with scales and balances and the draft for every horse has been found to be the same. It is not necessary to go into any lengthy explanation because the lettering on the drawing gives full instructions about making these eveners. It is simply a question of getting your holes bored right. This evener can be used on wagons, manure spreaders, binders and, indeed, on any tongued implement. There are many tasks to be performed on the farm that are too heavy for a pair of horses and yet too light to require a four-horse hitch, and in these cases three horses may be used to great advantage.

A THREE-HORSE EVENER FOR TONGUE.

CURRENT EVENTS

ABSOLUTE prohibition legislation took its longest stride forward in the nation's history last week when the lower house of congress, after a heated debate, approved by a four to one majority a senate measure which would raise an ironclad barrier against importation of liquors into prohibition states. It is expected that President Wilson will approve the measure, so that it will shortly become a law. The provision is regarded as the most far-reaching that could be enacted by the federal government, and, as sweeping as would be possible under any method short of a national prohibition amendment. It would cut off entirely liquor importations, amounting now to millions of dollars annually into the large number of states which have forbidden manufacture or sale, but have permitted importation for personal use. Of the twenty-two states which will be prohibition territory on July 1st, only eight have forbidden importation of intoxicants for personal use. The fourteen around which the provision would erect a non-importation barrier are: Alabama, Colorado, Georgia, Iowa, Maine, Mississippi, Nebraska, South Dakota, North Carolina, Oklahoma North Dakota, Virginia and West Virginia. Most of these have set no limitation on the amount that can be brought in for individual use. The law would absolutely prohibit the shipment of liquor into all these states, regardless of any question of state rights or personal privilege. The law may be amended so as to extend the time for its going into effect until October 1st, in order to give brewers and distillers a chance to get rid of their surplus stock. But this appears to be the only loophole of relief open to them at the present time.

MAJOR-GENERAL FREDERICK Funston, commander of the southern department of the United States army, died suddenly in a hotel at San Antonio, Texas, aged fifty-one years. He was one of the notable and picturesque military figures of the day and was looked to for still greater achievements in the years to come. It was Funston who captured Aguinaldo, practically single-handed, during the Philippine campaign, having entered the service, at the outbreak of the Spanish-American war, as colonel of the Twentieth Kansas. Later on, when the troops were sent to Vera Cruz, Mexico, on order of President Wilson, General Funston was in command. He was in charge of the troops which went down into Mexico again six months ago in the pursuit of Villa. Funston's first experience on the firing line came in Cuba, where he commanded General Gomez's artillery with remarkable results. After engaging in twenty-two battles and being wounded three times, he resigned his command because fifty guerrillas who had aided the Spaniards were executed against his wishes. Captured by Spaniards on his way to Havana, he escaped death by swallowing a letter to the president of Cuba which would have proved his identity. While a colonel of the famous Twentieth Kansas volunteer infantry in the Philippine war, Funston performed feats of bravery that brought him the title of brigadier general. His capture of Aguinaldo and his fording of the Rio Grande at Columpit under fire featured his work.

THE situation in regard to possible war between the United States and Germany remained unchanged at the beginning of the present week. No overt act has been committed by Germany which was serious enough to warrant an actual declaration of war or even the arming of merchant vessels, in the opinion of President Wilson. Several ships, with Americans in the crew, had been sunk by German submarines, but practically all were warned and the crew given time to escape, so that there was no loss of life. A break between the United States and Austria now likely, inasmuch as Austrian submarines have been quite active of late, Austria poining with Germany in the submarine warfare against international shipping. Ambassador Gerard, formerly stationed at Berlin, reached Spain in safety and is probably on his way to the United States by this time. Ambassador von Bernstorff, formerly stationed at Washington, reached Halifax in safety and is probably nearing a European port by this time, safe passport having been granted to him by the allied enemies of Germany. The situation remains critical, with the United States making haste to get upon a war footing and to put the navy (which would have to bear the brunt of the early fighting, at least) in good trim.

THE most serious freight car shortage in many years is now in existence, due to the submarine policy of Germany, which ties up shipping and makes it impossible for freight cars to unload at the docks. President Griffin, of the Chicago Board of Trade, has advised the Interstate Commerce Commission that the grain trade of his section is in a desperate way. Forty million bushels of grain are held up in local elevators, 7,000,000 bushels additional are in cars some of which should have been shipped three months ago. He said food product factories in Chicago in many cases are running only 25 per cent of capacity because they cannot ship their products out and that one of the biggest corn products factories in the world may have to close down entirely if conditions are not remedied. "The holding up of grain and grain products is what, largely, is sending food prices soaring in the east and entailing demonstrations such as that made by women in New York City," Mr. Griffin said.

THE Earl of Derby, British secretary of state for war, expressed the opinion that the critical period of the war would occur in the next few months. "I would be a false friend," he said, "if I did not warn the country that the war is going to be long continued and a struggle even more bitter than in the past. It can only be won by everyone doing his utmost. The three things most vital are money, men and munitions. Money and munitions are being supplied in large quantities. Men we want and must have. The nation will have to make greater sacrifices in the way of giving its manhood to fight its battles. You will not win the war by saying you have won it. I believe we are going to see the critical period of the war in the next few months. We must face it with courage. I confidently predict it will be a successful six months for us, but at the same time I do not think it will be a walk over."

COINCIDENT with the reopening of the American embassy in Mexico, the big army of national guardsmen that was concentrated on the border on account of bandit activities will be in process of dissolution. Orders were issued by the war department last week to begin the immediate demobilization of all the guard units remaining in border camps, and it is expected that the last troop train will be on its way north by March 7th. General Pershing still will have on the border nearly 50,000 troops, all of the regular army, disposed along the line from Brownsville to Yuma, Ariz., on plans worked out by the general staff. The command includes all of the troops who were in Mexico under General Pershing. General Pershing will remain at El Paso. Secretary Baker said that the withdrawal of the state troops is in no way connected with the crisis with Germany, but carries out a policy determined on long ago by the administration.

NEWS print paper manufacturers, facing criminal prosecution in United States courts for alleged combination in restraint of trade, proposed to the federal trade commission that it fix a resonable price for the output of the principal plants of the United States and Canada. The commission announced it had the proposal under consideration and would reply immediately. It is generally believed the answer will be an acceptance. The action of the manufacturers gives a signal victory to American newspaper publishers, who, in the face of advancing paper prices, have seen nothing ahead but ruin for many of their number. If the proposal is accepted, officials say it will mark an expansion of the functions of the government, which, in arbitrating the differences between two industries, opens up a wide field of possibilities for the future.

THE effect on the export trade from Boston, Philadelphia, Baltimore and New York of Germany's proclamation of unrestricted submarine warfare is revealed in figures made public by the American Railway Association, which is co-operating with the interstate commerce commission to relieve the car shortage situation. The statistics show that from February 1st to February 14th, the grain delivered to vessels at the four ports amounted to approximately only 8,000,000 bushels. This compares with 29,000,000 bushels in January and 58,000,000 in December. The deliveries have been regulated, the association says, to correspond with the vessel capacity.

The Only Car

That Does Those Things Is

Hudson Super-Six

The Super-Six is the only car that ever went 1819 miles in 24 hours.

It is the only car that ever went from San Francisco to New York and back in 10 days and 21 hours. In that one round trip it twice broke the ocean-to-ocean record.

At Pike's Peak, a Super-Six Special defeated 20 great rivals, all specially built for hill climbing. It made the best time in the world's greatest hill-climb.

It holds all the speed records for stock touring cars, and the records for quick acceleration.

Note What That Means

You say you don't want a racing car. We know you don't. You will never, perhaps, use half the power or speed of the Super-Six.

But mark that this motor is a small, light, simple Six. We have added no size or cylinders. We have taken a light Six and, by this invention, increased its efficiency 80 per cent. And solely by reducing friction, which destroys the motor and wastes its power.

We Did Just This

The Six-type motor had great limitations. Despite all perfections, much vibration still remained. And vibration causes friction.

Some engineers, including the Hudson, were testing Eights and Twelves. They felt that twin-type motors might solve the friction problem. The trend was away from Sixes.

Then Hudson engineers brought out this Super-Six invention. It is a Hudson invention, patented by Hudson. In this new-type Six they obtained all the efficiency and endurance sought for in the multi-cylinder type and they did this without adding cylinders, complications or weight.

All in Endurance

All the Super-Six records—for speed, hill-climbing and long-distance—were won by this motor's endurance. They mean that motor wear and friction are reduced to almost nothing.

By excelling in these feats, it proved that this motor will outlast any other type.

That is what you want above everything else. You want less wasted power, less wear, less friction. That means, of course, supreme performance. But it also means supreme economy.

What You Can't Afford

Some men will say, "I can't afford a superb car like the Hudson."

But you can. All this beauty, luxury and superlative performance will cost you less than many a car without them.

The Super-Six invention, in all probability, doubles the life of a motor. It saves the power which was wasted in friction. And this year we add a new gasoline saver which saves a great deal more.

No other fine car gives such value as the Hudson. No other car has a motor which compares with this. A higher-quality car is impossible. Yet note how far the Hudson undersells many cars that it out-performs.

Go see and prove this car. It is now the largest-selling car above $1200. And the saving shows in the Hudson price.

Making the Potato Patch Pay.

Spraying and What It Means Toward Better Potato Yields—A Few Experiences of Our Successful Wisconsin Potato Growers During the Past Season.

Showing That Spraying Pays.

To the Editor:—I consider the special seed plot for potatoes the very best method of preventing varietal mixture; also preventing diseases and bringing about a higher state of productiveness.

To start with, I select about two or three bushels of the most perfect type and desirable size, with smooth skin, free from any disease. These potatoes are given the "Formaldhyde treatment" and cut in large pieces. The round potatoes, such as Green Mountains and Rural New Yorkers, are quartered, while the long potatoes, Burbanks, I cut in four, five or six pieces.

I plant these on the potato land I have, and take much pains with them in regard to cutting out plants that are diseased or not thrifty. In the fall I dig this plot by hand and select a few bushels of the very best hills for my seed plot next year. The rest of the desirable potatoes of this plot are used as seed for the main crop the next year. By following this up for a few years, it will surprise anyone who has not tried it, for excellent results are sure to be obtained.

This spring I bought a high-pressure, two-horse potato sprayer and sprayed three times with Bordeaux mixture, at the rate of 100 gallons per acre each time. I made the mixture 8-8-100; that is, eight pounds of lime, eight pounds of blue vitriol and 100 gallons of water. My sprayer had a spray boom for four rows, with two nozzles to each row. These nozzles are the "Tiger Strainer" nozzles and the best I have ever seen. I sprayed my field under a pressure of 125 pounds, going up the field, then turning and coming down on the same rows. This way I go over an acre twice. Although we had no blight this year, the fields that were not sprayed suffered from sun scald. I left a check in my field, so as to be able to see how much good the Bordeaux mixture did. At harvest time I got the following results on my seed plot:

	Bushels saleable
Sprayed Rurals, yield	151
Unsprayed Rurals, yield	67
Sprayed Burbanks, yield	146
Unsprayed Burbanks, yield	55
Sprayed Green Mountains, yield	100
Unsprayed Green Mountains yield	47

As was stated, in the seed plot, my sprayed Burbank yielded 146 bushels marketable potatoes to the acre. In my adjoining field of Burbanks (see not hill selected) the sprayed yielded eighty-eight bushels per acre, and unsprayed twenty-five bushels.

This shows very plainly that it pays to hill select and spray with Bordeaux mixture.

I am enclosing three pictures of my sprayer in action. One of my Burbanks in seed plot and one of my Burbanks in main field (in sacks).

Karl T. Hazelberg.
Barron Co., Wisconsin.

Results of spraying—patch at left, not sprayed, yielded fifty-five bushels marketable potatoes. Patch at right, sprayed, yielded 146 bushels marketable potatoes.

Two-horse spraying rig on the Hazelberg Farm, Barron county, Wisconsin.

Another place where spraying paid. Patch at left, not sprayed, yielded twenty-five bushels marketable potatoes. Patch at right, sprayed, yielded eighty-eight bushels of marketable potatoes.

Pile of genuine Rural New Yorkers on Gust Kringle Farm, Barron county, Wis.

In Sawyer County.

To the Editor:—In regard to potato raising, I consider myself only a beginner. If I have had any success it is partly due to practical knowledge of handling the soil, for which I can thank my father, who is a gardener and nurseryman; secondly, to farmers' institutes and last to the study of methods used by successful growers in my neighborhood, where I have lived four years now.

Starting in on cut-over land four years ago my plan was, and still is, to clear and break land and plant to cultivated crop the first year, grain with clover seed the second year; clover hay the third and then the fourth year it will be in good condition for potatoes again.

On new breaking I drag with a spring-tooth harrow and light drag about eight times before planting and two or three times after planting. I cultivate five or six times and hoe them once. I can't work my land too much. If I have time I work it more. I raise from eighty to 125 bushels to the acre

Last spring I turned under my clover seed in June when clover had a good start—dragged it three times with a light drag planted to cultivate both ways. The heavy rains packed the ground soil. I put the spring-tooth harrow on very light and just when the potatoes started sprouting I dragged two times with the light drag. As soon as I could see the rows I started the cultivator which I used five or six times and went through them once with the hoe which was easy. I dug out 200 bushels to the acre last fall.

I select my seed in the field when I dig, smooth, clean, even-sized (not too large) marketable potatoes. With proper selection and rotation of crops with clover to turn under, the danger of scab is practically nil. We are not afflicted with scab around Seeley. I have not treated any potatoes yet, but will treat them for scurf in the spring, as I have very little of that and wish to eliminate it altogether.

I have had no experience with late blights yet and I may be neglecting by not using Bordeaux spraying. I used three pounds of Paris green, dry, to combat bugs last summer, the worst I have seen.

Gunnar Mosbeek, Fairview Farm.
Sawyer Co., Wisconsin.

Good Work of Potato Association

To the Editor:—In March, 1916, we formed the Cedar Lake Potato Growers' Association with the hope of benefiting growers in our locality. We

felt that it would be useless to try to induce other farmers to improve their potato-growing methods unless we could show them through our organization, that better stock meant a better price because we would be able to enter a better market with a superior product. Most of the members secured certified potato seed to begin with at $1.25 a bushel. This saved a good deal of work pulling out mixed stock in the field. All seed was treated for scurf and scab with a solution of formaldehyde, one pint to thirty gallons of water, and the seed remained in this solution for three hours. For vine diseases, such as early blight and late blight, we used Bordeaux mixture 4-4 to 50, meaning four pounds of blue vitriol, four pounds of fresh lime and fifty gallons of water to the mixture. We used this treatment three times during the growing season with excellent results. The vines were in a healthy condition when frost came late in September. With the first two applications of Bordeaux we used four pounds of arsenate of lead to fifty gallons of Bordeaux for the bugs and with very satisfactory results. We found this a great deal less expensive than Paris green. A few of our members sold their stock from the fields at $1.25 per bushel, but we are being offered about $2 a bushel now for nearly all of the stock in our cellar. However, we haven't much to sell, as the results secured this season have caused a great many farmers, both members of our association and outsiders, to become interested in our work and we will use most of the good seed stock here at home. We expect to supply our home demands before trying to sell outside.

Sunlight hog house, and potato warehouse on Cedar Lake Farm, Barron county, Wisconsin.

Increasing Potato Yields.

To the Editor:—To prevent disease and varietal mixtures in my potatoes, I practice hill selection of seed and believe it will be a great factor in improving our potatoes and increasing the yield. I select enough high-producing hills to plant about one-half acre. This patch is planted in checks thirty inches each way. Seed is cut quite coarse and planted by hand about four inches deep. This patch is given the same care during the growing season as the main crop. In the fall it is dug by hand and enough seed selected for the next year's seed plot. In hill selecting I look for large, healthy-looking vines, and if it has more than an average number of healthy-looking potatoes of fair size and fairly true to type it is taken for seed. The balance of the crop from the seed plot is used for seed for the main field. I have also treated my seed with formalin for scurf and scab. I do this about two weeks before planting, as this treatment will kill the sprouts that have started. After treating I leave the potatoes in a shed, where there is free circulation of air to dry them quickly, and it gives them a chance to start a thick, tough sprout before the seed is cut. I go through my field while the vines are in blossom and any mixture is pulled out to control the bugs. I use Paris green and apply it with a dry powder blower while the vines are small. Later on, when the vines are larger, I use a liquid sprayer. I spray with the Bordeaux mixture, whether there appears to be danger of late blight or not, using four pounds blue vitriol and four pounds lime to fifty gallons of water. If there are any bugs, I add about three pounds powdered arsenate of lead to fifty gallons of this mixture. This will cover about one acre.

Good soil and good culture are just as important as good seed. I generally have clover sod for potatoes, covering it with a light coat of manure, taking it right from the barn during the winter and spreading it on the field. I plow in the spring about seven or eight inches deep. I like to have a good growth of grass to turn under, as that makes conditions unfavorable for the development of scab. I work the ground thoroughly with the disk harrow and aim to plant from the 25th of May to the 1st of June, planting about three to four inches deep. I get in about fifteen bushels of seed per acre, planting in rows three feet apart and twelve or thirteen inches apart in the row. Just before the potatoes come up I give it a deep cultivation and then cross drag with the smoothing harrow. I give it a good cultivating every week or so, until the vines are too large to get through. About this time they are hilled up. I dig with a four-horse digger and put the potatoes in piles in the field until digging is done, when they are hauled into the cellar.

I grow Rural New Yorker and Burbank potatoes under the state certification plan, and sell nearly all of them for seed. My potatoes in 1916 yielded 175 bushels per acre in spite of the dry weather.

I exhibited potatoes at the Barron County Fair, winning second on Burbank and Rural New Yorker. At the Northern Wisconsin State Fair I won third on Rurals, and at the Wisconsin Potato Growers' Show, at Eau Claire, I won first on Burbank.

Potatoes helped build this home and buy this car on Gust Kringle Farm, Barron county, Wisconsin.

I am enclosing a few pictures of my field and farm which you may use, if they are good enough and you see fit.

Gust Kringle.
Barron Co., Wisconsin.

Growing First-Prize Rurals.

To the Editor:—I am giving, for the benefit of Wisconsin Farmer readers, a few of the methods I use in growing potatoes.

We raise Certified Rural New Yorker potatoes, after growing several of the standard varieties, we found the Rurals were better adapted for our heavy soil, also more disease resisting, growing smoother, and truer to type, than any variety we have grown.

The potatoes are planted on clover sod, or new land plowed deep in the fall, and thoroughly pulverized in the spring to get a good seed bed and kill the weeds before planting. We use no commercial fertilizers.

In treating our potato seed we have used both corrosive sublimate and formaldehyde for scurf and scab, but the corrosive sublimate has always given us better results. Wooden barrels are used for holding the solution and the potatoes are put in sacks, and then placed in the barrels to soak.

We allow the potatoes to soak one and one-half hours, one and three-fourths hours and two hours, and only use the solution for three dippings. When the potatoes are taken out they are placed upon boards above the barrels to drain.

Then we spread the potatoes out upon the floor in the feed rooms of our hog house, where they are left two or three weeks in the sunlight to warm up and sprout. The seed is cut large, care being used to break off as few sprouts as possible, and leave as much of the seed end on each piece as we can.

We try to get our potatoes planted before the 1st of June. It requires about twenty bushels per acre where the seed is cut large; potatoes are cultivated deep the first time and very shallow the rest of the season.

At the last cultivation the potatoes are hilled slightly, and we have always obtained better results by not using a potato hiller. Bordeaux mixture for spraying is used several times during the season to prevent blight.

Most of the potatoes are dug with a fork, and all the good type, smooth potatoes are selected from the field for seed purposes. Our Rurals yielded 200 bushels per acre this year under very unfavorable weather conditions.

We took first prize on our Rurals at the Barron County Potato Show, first at the Northern Wisconsin State Fair, and first at the State Potato Show, at Eau Claire. Through the efforts of our county agent, R. L. Cuff, Barron county is producing large quantities of certified seed potatoes.

Do you want to heat-

You have fussed and shivered long enough—trying to heat your house with old fashioned methods which yield little comfort with great labor and many disappointments. Why not make your whole house just like June, even in below-zero weather? An IDEAL heating outfit will do this for you and will last as long as the building stands and never need repair or overhauling.

AMERICAN RADIATORS & IDEAL BOILERS

The smallest cottage or largest building can be equipped at present attractive prices to suit anyone's pocketbook. These IDEAL outfits heat the whole house with one fire and require no more care-taking than to run a stove for one room.

IDEAL Boilers burn fuels of *any locality*, hard coal, soft coal, screenings, pea coal, slack, wood, slabs, etc., and give heating results that open up the whole house with good, healthful heat throughout chilly days or bitter cold nights—*not necessary to have a cellar or water pressure.*

The lasting heat that costs the least

It is wise even to increase your borrowing at the bank in order to have IDEAL heating *this winter* for the comfort and savings that IDEAL heating will give you will make you more money than the bank interest you may pay.

AMERICAN Radiators and IDEAL Boilers change any house into a *home.*

A No. A30 IDEAL Boiler and 262 ft. of 38-in. AMERICAN Radiators, costing the owner $210, were used to heat this farm house, at which price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions. The IDEAL outfit is the *only* feature of the house which is never worth *less* than you paid for it.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

Get this book about Ideal Heating

Don't put it off another day. Read up and get all the information as to comfort, cost, and fuel economy that an IDEAL Boiler and AMERICAN Radiators will give you. Write today and get a copy of "Ideal Heating." Puts you under no obligation to buy.

Sold by all dealers. No exclusive agents.

For 62 Years The Leaders

EVER since 1855 Rock Island Farm Tools have first shown the newest *real* improvements. The first *successful* Hay Loader—the first frameless Sulky Plow—the first *successful* frameless Lister—the first oscillating scrapers for Disc Harrows and many others.

Rock Island Farm Tools

Also our greatest invention—the "CTX" Bottom, which is *revolutionizing the plow business.* It turns the furrow slice clear over and lays it *flat* on the subsoil, preventing air spaces, which, in dry season, choke off the subsoil moisture. Learn all about all Rock Island Farm Tools. Send for the book pictured below.

Rock Island Corn Planter

Accurate edge or flat drop. Drops 2, 3 or 4 kernels to the hill, as you wish. Change drop instantly without stopping team or leaving your seat. Original, *successful* Convertible Drop allows you to use edge or flat drop plates. Either hill or drill drop—valves cannot double drop. Time saving Friction Reel. Tip-over Hopper, so you can change plates without emptying hopper. Fertilizer and Cow-Pea Attachments can be furnished.

Rock Island Hinged Elevator Hay Loader

Only successful Hinged Elevator Loader made today. *Any sized* load delivered onto rack without wind blowing hay over the field or return elevator carrying hay off load. *Strongest* frame built—*all steel* with tremendously strong steel angle bracing.

Great Western Cream Separator

has *demonstrated* that it *does* get a larger per cent of cream *easier* than any other separator. Built on the convenient, labor-saving, low-down principle, which we originated. Easier filled. Easier operated. Closest skimmer known. Only separator that *will* skim cold milk. Learn *more* about it and *all* Rock Island Tools.

Cost and Cure of Wormy Apples.

Results of Wisconsin Experiments as Told by H. F. Wilson, of the College of Agriculture Horticultural Staff.

THE codling moth is probably the most serious pest of apples known. It is world-wide in its distribution and may be expected to occur wherever apples are grown. This insect passes the winter as full-grown larvae under pieces of bark on the trunks of apple, hawthorne and pear trees. Along in May the larvae change into a new form known as the pupal or resting stage, transforming again in late May or early June into small ash-gray moths which lay a number of milk-white oval and flat eggs on the leaves and fruit. These eggs hatch in from a week to ten days and the young larvae immediately make their way into the fruit where they continue to feed and develop, forming a complete life cycle in about five weeks. A second generation of moths or adults appear the last of July and first of August and these again lay eggs which produce by fall the full-grown larvae for the next spring's crop of adults. When full fed these larvae leave the fruit and make their way to the tree trunks where they find their way under a piece of bark, construct a silken cocoon to protect themselves from the weather and enemies and remain there until the following spring. The injury of this pest is twofold in extent.

About 70 per cent of the larvae of the first generation make their way into the fruit through the calyx end and, although no injury may appear from the outside until the larvae emerges, the presence of the "worms" inside the fruit is indicated by a mass of frass and droppings pushed out through the entrance opening. The other 30 per cent of the larvae enter the fruit from the sides and make very conspicuous burrows that are later supplemented by very large emergence holes which the larvae make just before leaving the apple. The second injury and oftentimes the more serious is caused by the young larvae making very small entrance holes just in under the skin of the apple and then leaving without going deeper. Such injury is generally grouped under "stings," and, occurring on fruit which is almost mature, causes the grower no little loss because one or two stings on a single fruit is sufficient to reduce the market value. These stings often occur on mature fruit and cannot be noticed until the fruit is picked. The grower may, therefore, frequently be much chagrined to find that a very fine appearing apple crop is considerably reduced in value by these injuries when the fruit is being packed. Coming at this time the results are often very discouraging and causes a feeling of distrust in the mind of the grower as to the value of remedial treatments. However, all of this injury can be prevented if the proper sprays are used and applied at the correct time.

The lesser apple worm is an insect closely related to the codling moth both in its life history and the nature of the injury which it does. In fact, the work of this insect is so much like that of the codling moth that in many cases, unless the insects themselves are present, the injury cannot be separated. However, when one becomes familiar with the work of these two insects it is not difficult to separate them at the first glance. The larva of the codling moth when mature is much larger than that of the lesser apple worm and is white both above and below with a slight pinkish tinge. In the younger stage the pinkish tinge is absent from the codling moth larva. The larva of the lesser apple worm is pinkish or reddish in color and no white appeared in the specimens we have found, although whitish larvae of this insect has been reported from other sections of the United States. The moths appear in the spring and the eggs are laid about the same time as those of the codling moth. We have not been able to see the eggs of the lesser apple worm, but they are said to appear considerably like those of the codling moth, but only about half as large. There is considerable difference in the appearance of the frass produced by these two insects. The larvae of the codling moth produce a loosely woven mass of coarse particles pushed from the burrow without any indication of their being held except by contact with other particles. The frass produced by the lesser apple worm is of a finer nature and the particles are more closely woven together as if to form a protective covering over the opening of the burrow. As in the case of the codling moth, the larvae of the lesser apple worm shows a preference for the calyx end of the apple, but it seldom, if ever, makes its tunnel into the center of the fruit. The feeding burrow being made close to the surface of the apple and extending as a blotch around the original place of entrance in some cases. In this way the calyx will be completely eaten away. The injury is more conspicuous and appears more extensive since it is on the surface of the fruit. Like the codling moth, there are two generations a year, one in late May and early June and a second in the last of July or first of August. The treatment used for the codling moth seems to be effective for its control.

Fortunately for the man who is specializing in apples, all these insects may be controlled with a certain definite system of sprays applied at more or less definite periods. These periods correspond to the time when the spraying is done for the codling moth and apple diseases, so that if careful work in spraying is done no grower need suffer any considerable loss from these pests singly or collectively. Three applications of spray are usually necessary and in some seasons a fourth. First spray in the spring just after the petals have fallen and before the calyx lobes close, using arsenate of lead, three pounds to fifty gallons of water. Make the second application, using the same spray, ten days later. Where apple scab is prevalent fungicides may be added to both of these sprays. A third application should be made from the 25th of July to the 1st of August, varying with the season and the different regions of the state. If the codling moths appear abundant in the early summer and the season is long and warm a fourth spray should be made about September 1st to prevent "stings" made by young larvae appearing in late September. Such a condition existed in the season of 1916 and a fourth application of arsenate of lead would have more than paid for the cost of application in the amount of fruit saved. In combating the plum curculio it has been noticed that clean farming to reduce winter shelter and open pruning to let in the sun will help to a considerable extent in keeping down this pest. Also thorough cultivation in the fall or spring will benefit in destroying the pupae in the soil. All early droppings known to be infested with curculios should be gathered and destroyed.

Law Questions.

Unoccupied Land—No Fence Required.

A Subscriber, Excelsior, Wis.—I own a tract of land in Wisconsin, that is not under cultivation, and not occupied. Does the law require me to build half of the partition fence between my land and adjoining lands?

Answer.—It does not.

Insurance—False Pretenses.

A Subscriber, Watertown, Wis.—Some time ago A applied for an insurance policy. The insurance agent who took A's application made A sign a paper which the agent said would make the policy take effect the same day it was received at the home office. Seven days later the agent delivered the policy to A, who then paid the premium and got his receipt. Thirty days after A received a letter from a bank demanding that he pay his note, which A refused to do, as he had witnesses to prove that he had never done any business with said bank. Then the agent paid the note and afterwards A found that the paper he had signed was a bankable note. (1) Can A have the agent prosecuted by law? (2) Can an insurance agent insure a minor without the consent of his parents or guardian? (3) How long is a promissory note good in Wisconsin without having it renewed?

Answer.—(1) You can have the insurance agent prosecuted for obtaning your signature to the note by false pretenses. (2) A minor cannot make a binding contract for insurance. (3) Six years after it is due.

"I Like the Shaft Drive —It's Always On the Job"

THAT'S the way one user tells about his Janesville Corn Planter. And being "on-the-job" at the *right time* is the biggest part of the corn planting. Good seed, good planting, and good cultivating all go together, but it's being ready to plant when the weather will let you that makes the crop.

The shaft drive reduces the chances for delay because it reduces the number of parts in the planter. You get rid of the chains, sprockets and springs. There are no parts to gum up and call for a kerosene bath with every round. Simply grease the shaft once a season and it's always ready for business.

JANESVILLE CORN PLANTER

Manufacturers of Farm Implements

The Only One With The Shaft Drive

The feed drop is in sight of the driver. See every hill as it drops. Change the feed instantly without stopping the machine. Fit your crop to the field and boost the yield per acre. Just what you want for silage corn.

Provide for any quantity of seed corn per acre. Commercial fertilizer and cow pea attachments also furnished.

Eighty rods of wire, a reel, a disc marker, a full set of edge drop and flat drop plates for checking or drilling, furnished with each machine. Made in following models: checking and drilling, drilling only and lister planter, disc, shoe or stub runners.

In and Around Wisconsin

At a special election the citizens of Pouk county will vote on a proposed $400,000 bond issue for the improvement of roads.

The Janesville Fair will be held August 14th, 15th, 16th and 17th, somewhat earlier than usual. One added feature of the fair this year will be two night shows.

Articles of incorporation have been filed for the Cornell Co-operative Creamery, of Cornell, Chippewa county. The company is incorporated for $5,000 divided in 500 shares of $10 each.

The Rusk Creamery, in Dunn county, in 1916 paid an average of 35 cents per pound for butter fat. Receipts for the creamery for the year were $131,315.28. The association has about 200 members.

At the recent ninth annual meeting of the Northwestern Buttermakers' Association in Eau Claire officers were elected as follows: President, R. G. Bennett, Chippewa Falls; vice president, Lloyd Winter, Eau Claire; secretary-treasurer, Robert Carswell, St. Paul; directors, H. O. Strezinsky, Menomonie; Fred Haas, Eau Claire; G. Hammer, Colfax.

Joseph W. Entringer, of Kewaunee county, writes that it will be necessary for cheesemakers to advance their prices for manufacturing cheese. New laws compel the cheesemakers to conduct and operate their factories along lines which cost more money than in former years. A cheese and buttermaker has to pay a license. He is compelled to adopt sanitary measures which are more or less expensive. He is obliged to invest more money in his plant. All material, such as boxes, bandages, rennet, color, etc., cost more money. A good many cheesemakers are asking for an advance of ½ cent a pound and in quite a number of instances have received an advance of ¾ cent a pound. Mr. Entringer says that farmers ought to agree to these advances, as they are receiving much higher prices for their milk because of the high prices of cheese.

The business for the Mauston Creamery for 1916 amounted to $160,000. During the past year this creamery paid 2 cents above Elgin butter price for cash cream. At the regular monthly pay days the creamery paid stockholders 3½ cents above Elgin. Thus the receipts for butter fat for the year are 2½ cents to 3½ cents higher per pound to regular patrons who drew their pay semi-monthly than to those who sold for cash at 2 cents above the Elgin market. The average paid to stockholders last year for butter fat was 39½ cents.

The annual summer meeting of the Waukesha County Guernsey Breeders' Association will be held some time in June at the Geo. McKerrow & Sons' Company farm near the village of Pewaukee. The McKerrow farm has a herd of about 125 Guernseys and also other fine live stock, including some of the best sheep in the country. The invitation has been extended to the Western Guernsey Breeders' Association to hold its meeting at the McKerrow farm at the same time. As a result of the agitation at the recent winter meeting of the Waukesha County Guernsey Breeders' Association a cow-testing association is being organized.

The Downsville, Dunn county, co-operative creamery in 1916 paid patrons for butter fat $232,387.12. This creamery received 2,199,832 pounds of cream, which netted 653,359 pounds of butter fat and made 790,040¾ pounds of butter. The average test of cream was 29.69. The per cent of overrun was 20.91. The price paid for butter fat was 35½ cents. The increase in receipts over the previous year was $20,575.15.

The sixty-eighth annual Elkhorn Fair will be held September 18th, 19th, 20th and 21st. Thomas O'Keefe, of Elkhorn, will be superintendent of the horse department; Paul Gavin, of Linn, superintendent of the cattle department; F. S. Teetshorn, of Richmond, superintendent of the swine department; Percy Cowles, Elkhorn, superintendent of the poultry department, and O. L. Shearer, East Troy, superintendent of agricultural hall.

Farmers of La Crosse county are particularly well pleased with the showing which the La Crosse county division of the Wisconsin Experiment Association made at the recent grain show in Madison. The following is a list of the La Crosse county winners at the state show:

John Bendel, Stoddard—Third on ten ears Wisconsin No. 7 corn; fourth on fifty ears Wisconsin No. 7 corn.

Peter Dengel, La Crosse—First, sheaf No. 1 oats; second, Sudan grass; third, sheaf barley; fifth, peck barley.

Alfred Gilster, La Crosse—Third, ten ears pop corn.

William Moos, Onalaska—First, peck pedigreed oats; first, three cuts alfalfa; first, ten ears pop corn; third, peck spring wheat; third, peck pedigree barley; third, bundle red clover; fourth, peck winter wheat; fourth, bundle timothy; fourth, sheaf winter wheat; fourth, sheaf spring wheat; fifth, bundle alfalfa.

Edward Peters, La Crosse—First, sheaf of rye; second, sheaf pedigree No. 5 oats; second, peck pedigree No. 1 oats; fourth, peck pedigree No. 5 oats; fourth, sheaf barley; fifth, sheaf spring wheat.

Harry Pralle, La Crosse—Fifth, sheaf rye; fifth, peck winter wheat; fifth peck oats.

F. J. Staples, Onalaska—Fourth, ten ears pop corn.

John Van Loon, La Crosse—First ten ears No. 8 corn; second, Sudan grass; second, ten ears Golden Glow corn.

Jippa Wielinga, Midway—Second, ten ears Golden Glow corn; third, fifty ears Golden Glow corn.

Garrett Westerhouse, Onalaska—Third, soy beans.

Otto Wolf, La Crosse—First, peck alsike clover seed; first, sheaf rye; second, ten ears Wisconsin No. 7 corn; second, sheaf rye; third, fifty ears Wisconsin No. 7 corn; third, ten ears Golden Glow corn; fourth, sheaf alsike clover; fifth, single ear of corn; fifth, sheaf oats No. 1.

EXHIBIT AT RECENT LA CROSSE COUNTY GRAIN SHOW HELD AT ONALASKA, WIS.

EXPOSITION WINNERS.

Five La Crosse county farmers won agricultural prizes at the Panama-Pacific Exposition. These men were awarded the medals won at a meeting held in Agricultural Hall Friday evening, February 8th. The following were honored:

Jippa Wielinga, Midway—Silver medal on corn.

John Van Loon, La Crosse—Silver medal on corn.

Peter Dengel, La Crosse—Silver medal on oats.

R. E. Freehoff, Coon Valley—Silver medal on corn.

Wm. Moos, Onalaska—Bronze medal on oats.

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before buying a gasoline engine (manure spreader, cream separator or tractor) of any make, or kind, or price, please ask for and read Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer engines, separators, spreaders direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a gasoline engine or any of the other Galloway lines until you first get our prices and our proposition. Get my price before you buy! Cash or time.

HERE'S THE REAL PROOF!

I can't give it praise enough. I had a 6 h. p. Galloway engine belted to my 16 in. corn mill and it does the work, where an 8 h.p. of another make did not. M. P. SHOEMAKE, DEFEATED, TENN.

My 6 h.p. Galloway was 6 yrs. old this fall. Works perfectly—good for 15 yrs. yet. HAROLD W. BARNES, DELPHI, IND.

It has not cost me one cent for repairs. Am now buying a 2 1-4 h. p. engine and washing machine for the home. Consider the Galloway simplest engine made. ADOLPH DRINOVSKY, TRAER, IA.

I found the 16 h. p. Galloway simplest, most powerful, best governed engine I ever saw and $[illegible] cheaper. HENRY WENHAM, MILTON, WIS.

THE WM. GALLOWAY CO., 35 Galloway Station, **Waterloo, Iowa**

A Plan For the Farm Garden.

How Large Shall the Garden Be and What Should Be Put in It—Pointers of Value at This Time of the Year.

THE farm garden is worthy of more consideration than it receives on most farms. There was a time when it was considered essential to a family in the country to have a patch of ground where the wife could go for her vegetables for cooking and canning purposes. Farmers then were more isolated and did not depend on outside products. It was quite common then that the garden received the care it deserved. But with specialization towards the raising of certain crops for definite purposes, the garden came to be regarded as a bother, and, as a consequence, receives only the most half-hearted care on most farms. Men, as a rule, do not like to work with garden tools. They would rather drive a team and do the work with farm machinery. They figure that a garden cannot pay for the work that is put into it when all the work has to be done by hand labor. In this they are right and the way out of the trouble, therefore, is to plan the garden, so that a maximum amount of the work can be done by the usual farm implements.

As the garden is to be a help to the wife and she will have to use the products as they mature and are needed on the table, it should be located near the

SLED MARKER.

kitchen. To save time in the preparation of the seed bed and in the cultivation of the crops, it is best to lay it out in long rows. A rectangle is the best shape to work with. An area 100x200 feet will answer ordinary purposes. The rows in no case should be closer than three feet apart, and in the case of rhubarb, radishes, tomatoes and sweet corn, four feet is better. There should be about fifteen hills of rhubarb, forty hills of asparagus and some winter onions, all of these being placed in the same row. Radishes, leaf lettuce and head lettuce could be put in row No. 2 about the last of April. In row No. 3 use early turnips, onion sets, spinach, Swiss chard and parsley. Carrots and parsnips could be put in row No. 4, while beets and rutabagas could be seeded in row No. 5. The entire length of row No. 6 should be put in Globe Danver onions, these being seeded about the first of May. The next two rows should be put in peas, using about four varieties, such as Early Alaska, Mott's Excelsior, Gradus and Telephone. Another two rows should be used for beans and

PLANKER.

about four varieties planted. Two rows will be devoted to cabbage, one to tomatoes and two rows to sweet corn, using about four varieties. It will require about twenty-five hills of cucumbers, ten hills of summer squash, fifteen hills of Hubbard squash and twenty hills of muskmelon. Then there will be about four rows of early potatoes and eight rows of late potatoes.

Not all hand labor will be eliminated, but the worst of it will. The frequent use of the cultivator will prevent weeds from gaining the upperhand in the garden and as is so frequently the case, completely covering up the crops. The use of the seed drill is not advisable, as in most cases only a part of the row is devoted to one crop. With such crops as onions, beets, carrots, parsley and parsnips, it is a good plan to sow a little radish seed to mark the rows, so they can be cultivated with other crops before they come through the ground.

There is little danger of applying too much manure to a garden soil. The best time for the application of the manure is in the spring. If the ground was plowed in the fall, which is the best time to do it, the manure is disked in and the ground worked with a spike-tooth harrow and smoothed with the planker. The part of the garden that is not seeded at once ought to be cultivated as often as possible to keep the weeds from getting a start.

In laying out the rows for planting a sled marker, will give excellent service, as three rows can be marked at the same time. If the rows are not all to be planted at the same time, little effort has been wasted.

The selection and testing of the seed are held by some to be as important here as in the field. A test of the seeds can readily be made by counting out twenty-five to 100 seeds and placing these between moist blotters for germination. At least 75 per cent of the seeds ought to show vitality in a representative sample. A little more seed can be sown where the germination was weak and thinning out practiced later on. Radishes, lettuce and early beets can be thinned as the space is needed after they are established, but all other crops must be thinned as soon as possible, so that the good ones do not become stunted through the crowding in the row.

Vegetables in the diet mean better health in the family and a cheaper living on the farm. Best of all, the garden gives the housewife an opportunity to add variety to the meals. The problem of supplying a family with variety in the 365 days of the year is a perplexing one, and no greater help can be given a woman than a good garden to draw on. It is quite possible that the men folks do not realize the multitude of dishes that are prepared from the garden crops. The farm woman is justified in claiming the assistance of the farmer in making the garden a profitable institution. Proper planning of the garden is the first step towards this end.

Apple Trees 2-year-old $6.00 per 100
HANSEN Hybrid Plums, 2 year, 25c. Everbearing Strawberries, $1.75 per 100 Evergreen Seedlings, $1.25 per 100. Send for catalog full of bargains. **Mankato Nursery, Mankato, Minn.**

SPREAD NOW! HARVEST BIGGER CROPS THIS FALL!

A new 1917 model Galloway Spreader used to get the manure crop out on the land between now and planting time means bigger crops this fall. Prices were never better. The producer is having his inning! Now is the time to get that big manure pile out on the land because every load spread means cash in the bank next fall for farm improvements, pleasures or other things you want. Get your manure crop out on land where you plan to grow corn next year—top dress the winter wheat—get it on the soil where you are going to sow oats! Top dress the meadows—the alfalfa, the clover! Every manure pile is a pile of gold! A spreader used steadily for one to two weeks means that it has paid for itself because its use represents money at harvest time that you otherwise would not get. Quit spreading by hand—using old broken down spreaders, when you can buy the best spreader on earth—the Galloway new 1917 model Low Down No. 8—and still save $25 to $50 by buying direct from factory to farm! I mean every word of it! You can own the best spreader built and save from $25 to $50 over prices usually paid for spreaders not as good—not as down to date in design—as light in draft—made of as fine materials, nor covered by the eleven Galloway spreader patents found exclusively on the Galloway. These features and many others make the Galloway 1917 Models No. 8, No. 1A and No. 5.

WORTH $50 MORE THAN ANY OTHER SPREADER

New steel beater and wide-spreading V-rake pulverizes and tears the manure to shreds—worth $15 more on any spreader; my positive, invincible, irresistible, patented roller feed—the secret of our light draft (exactly the same principle as moving a house on rollers) worth $25 extra on any spreader (exclusive feature on the Galloway), patented automatic stop, uniform clean-out push-board, worth $10 extra on any spreader (exclusive on the Galloway), new everlasting pressed steel, unbreakable tongue, worth $5 more on any spreader; all these valuable features cost you nothing extra when you buy the Galloway at my new SPECIAL 1917 PRICE.

Remember I sell on terms to suit you—Cash, Bank Deposit, Half Cash Half Note, All Note, Installment Plan or one year to pay—and I sell direct at less than wholesale from factory to farm at actual cost of material, actual cost of labor and only one small profit based on the tremendous output of my great chain of factories here at Waterloo. I am a manufacturer—not a jobber or dealer. I give you thirty days' field trial and any Galloway spreader is returnable to us within one year if you are not perfectly satisfied. Try this spreader at our risk without obligating yourself in any way. Buy a Galloway DIRECT FROM GALLOWAY.

ASK FOR MY BIG NEW 1917 FREE BOOK

It is a big book of 280 pages. A postal gets it. Handsomely printed in many colors. It tells how to handle manure with the least labor. How a run-out, unproductive farm was turned into a goldmine crop producer. How to build a manure pit to preserve fertility. How to increase your corn crop from 15 to 25 bu. per acre. How a Galloway Spreader will pay for itself in one year by increasing crop profits and leave money to put in the bank besides. How I save you $25 to $50 on a spreader. How with the 10-pound steel and malleable mechanism we accomplish the same results as others do with 400 pounds of brittle gray iron. How a Galloway Spreader handles easier with two horses than other spreaders with three and often four horses.

S-32

Ask For That Book Today

NOTE THESE 1917 SPREADER IMPROVEMENTS

Built stronger and better than ever! Beater bolts are 1-16 in. larger, with lock nuts. Beater bar bolts increased in size and strength. Beater teeth longer and stronger than ever, which means they now tear the toughest manure finer than ever and spread it easier. Heavier bolts hold the beater bars in the beater head. Rear shaft increased in strength—higher carbon steel used. Additional bolts strengthen (beyond actual necessity) the beater bracket. Larger drive sprockets, which means lighter draft than ever. Fifth wheel castings larger and increased in strength—makes spreader box easier in turning. Rear conveyor shaft now made of No. 40 carbon steel. All steel tongue. Double chain drive direct from rear wheels. All metal parts thoroughly coated with asphaltum weatherproof paint. Adjustable from 4 to 24 loads per acre. Spreader box better finished and painted. Galloway wide-spreading V-rake on every machine. **Don't buy a spreader of any make or kind until you have tried a genuine Galloway 1917 model No. 5, No. 1A or No. 8** at our risk without obligating yourself in any way. This spreader should **not** be compared or confused with low priced spreaders that do not have the special exclusive patented features and genuine merit (backed up by tens of thousands of Galloway spreader users) that are found on the Galloway. Beware of cheap, absolutely worthless imitations of the genuine Galloway—at any price! Buy a Galloway direct from Galloway at Waterloo and you will be safe. Spreaders are shipped from Waterloo, St. Paul, Kansas City, Chicago or Council Bluffs—whichever is nearest your station.

"I built my reputation as a manufacturer on good manure spreaders."—WM. GALLOWAY.

UNDENIABLE PROOF!

I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125.—Geo. A. Kralik, Okla. City, Okla.

I consider it equal to a prominent machine sold for $140. One neighbor who has used both says he would rather have the Galloway.—W. O. Crascraft, Eckley, Colorado.

There are six Galloway spreaders in my neighborhood. They tried my spreader first. All are more than pleased. Have had no repairs in seven years.—Edw. Semmelroth, Tekonsha, Mich.

I saved $39. Believe I got a better spreader than was offered me here for $135.—A. T. Miller, Orella, Nebraska.

Two small horses handle it easily. Never saw another make I would exchange my Galloway No. 8 for.—B. K. Shaffer, Davey, Nebraska.

It is as good a spreader as money can buy. I kept $35.43 in my pocket. 1,850-lb. teams pulls it easily.—W. H. Adams, Pound, Wisconsin.

Cut-Over Land Conference.

Wisconsin Leaders Discuss the Best Methods to Bring the State's Fertile Lands Most Speedily Under Cultivation.

FOR a number of years we have heard about the agricultural possibilities of Upper Wisconsin. That there are millions of available tillable acres of fertile land in the cut-over regions has been constantly drilled into our ears. No one doubts that a rich empire is to be established there some time. Within the last year interested forces have tried to get down to something practical which will hasten the settlement of this rich country. The Cut-Over Land Conference held at Eau Claire, February 23d-24th was a crystallization of the thought and energy brought out in the last year's endeavors.

In brief the conference decided by resolution that it is advisable to speedily accomplish the following:

First, That the state legislature should appropriate the sum of $37,000.00 for two years to pay for more land-clearing demonstration work, such as was conducted in 1916 under the personal supervision of Carl D. Livingston of the engineering division of the Wisconsin College of Agriculture.

Second, That the legislature should take means to encourage the scope of work done by our immigration department and to direct attention toward Wisconsin settlers who are now looking toward less favorable countries.

Third, A law should be passed requiring filing of chattel mortgages with the county recorder of deeds. The purpose of this is to make a chattel mortgage a standard negotiable paper.

Fourth, That the Wisconsin College of Agriculture should be encouraged in its splendid work in upper Wisconsin and provided with sufficient state funds to encourage the scope of this work.

Fifth, That a similar cut-over land conference should be held at some future date to further foster the work started at this conference.

Sixth, That community work in land clearing should be encouraged to the extent of arranging for contracting outfits to pull stumps and carload shipments of dynamite with resultant lowering of prices on explosives.

Seventh, That the bankers of the cut-over section be urged to devise plans for loaning money for land clearing and extending the splendid work which they have already done along this line.

Eighth, That the attention of the federal government shall be called by the proper Wisconsin state authorities to the possibilities of reclaiming lands in upper Wisconsin by modern clearing methods.

Readers of The Wisconsin Farmer are familiar with most of the matters which were discussed at the Eau Claire conference. It is unnecessary for us to say anything further about the land-clearing demonstrations, except that they are to be continued starting probably May 1st or June 1st, under the direction of Mr. Livingston. The first year's work was made possible by the co-operation of several stump puller and powder companies who donated the use of their machines and experts. It is planned to take over this phase of the work and conduct it under the supervision of the Wisconsin College of Agriculture.

The conference listened to interesting discussions relative to the best and cheapest methods of clearing land. The decision was that both stump pullers and dynamite should be used. In the demonstrations the past year it developed that 20 per cent dynamite may often be used to as good or better advantage than 40 or 60 per cent dynamite and at less expense. The Wisconsin Advancement Association has done a splendid work in arranging for carload shipments of dynamite. About 100 carloads have been shipped into Upper Wisconsin in the past few months at a saving of about 3 cents or more per pound. Eighty bankers have been interested in this matter and a number of retail hardware dealers have agreed to handle the explosives for a small profit just large enough to cover the costs of deliveries. Bankers are also helping to get the stump pullers at low prices and in many cases aiding the settler with funds to help him clear up the land. The work which has been done in the past year will probably increase clearing in Wisconsin four or five times to what it has been in any previous year. The combination method of clearing, including the use of stump pullers and also dynamite and stump pilers, accomplishes clearing in the quickest possible time and at the least expense. Where stumps are pulled by machines dynamite is needed to loosen the earth which comes up with the stump.

Financing the settler is the big problem in Upper Wisconsin. Some land companies which have the capital are planning to put partially cleared farms on the market. In Rusk county banks have arranged to loan settlers enough money to pay for each acre of land cleared, the money being available as soon as the clearing is done. This work is likely to be extended into other communities. Another important work is to help the settler to get live stock and bankers are practically a unit in their willingness to loan on cows purchased. Twenty-five bankers of the northern part of the state and twenty-five bankers of the southern part of the state are preparing to organize a cattle loan company. This will be similar to the Wisconsin Farm Mortgage Company. One trouble in Upper Wisconsin is that many of the small banks do not have sufficient capital to make needed loans. It is for this reason that they hope to standardize the cow paper as mortgages are standardized, so that this paper may be sold outside and bring new money into the country. The Wisconsin Farm Mortgage Securities Company has brought more than $3,500,000 into Upper Wisconsin in the last two and one-half years. It is very encouraging to know that the bankers regard the cow paper as good paper and that this paper can be floated in large sums.

One banker, Mr. J. M. Smith, of Shell Lake, has brought $500,000 into his community from the outside in the last ten years.

A large number of bankers assembled at the Eau Claire conference were asked by Dean Harry L. Russell the pointed question whether or not they have ever lost any money on dairy cow paper. Not a single banker had ever lost a cent on such a loan. This, however, could not be said on beef cattle paper in Upper Wisconsin. While some successes have been made in beef cattle, farmers have brought in steers and fed them on clover and lost money on their sale in the fall. While the animals fattened, they did not hold up in shipment to market and there is some doubt as to the advisability of using the cut-over lands for strictly grazing purposes for beef cattle. The key to success seems to be the dairy cow.

Landowners, railroads, state authorities, manufacturers of stump pullers and dynamite, representatives of the college of agriculture, Upper Wisconsin citizens and representatives of the daily press and farm papers joined in the Eau Claire conference. The Wisconsin Advancement Association has formed a conspicuous part in this work. The Wisconsin Farmer will have more to say later relative to this conference and its effect. Governor Emanuel L. Philipp was a conspicuous figure at the conference. The governor's remarks on "An Empire in the Making" were inspiring. We were impressed by the brief address of C. T. Bundy, of Eau Claire, an attorney. He said that under the Wisconsin state law, if all cut-over lands were swamps the state has the necessary legal machinery to drain them for agricultural purposes. But there is no law which will permit the state to expend any money to clear land.

The speakers at the conference were as follows:

A. J. Edminster, Holcombe; Howard Weiss, Director United States Forest Products Laboratory, Madison; A. J. Keith, Eau Claire; C. D. Livingston, College of Agriculture of University of Wisconsin; W. G. Bissell, President Wisconsin Advancement Association; Governor Emanuel L. Philipp; B. G. Packer, Director of Immigration, State Department of Agriculture; W. H. Killen, Land Commissioner of the "Soo" Line; F. S. McCabe, Industrial Commissioner of the Omaha Line; Ford J. Allen, General Dairy Agent of the North Western R. R.; J. L. Sturtevant, Editor Wausau Record-Herald; W. A. Blackburn, Bruce, President Rusk County Bankers' Association; W. E. Briggs, vice president Northwestern National Bank, Minneapolis; J. H. Daggett, Manager bond department, Marshall and Ilsley Bank, Milwaukee; James T. Barber, Eau Claire; J. M. Smith, Shell Lake; E. L. Ainsworth, Chippewa Falls; W. H. Webb, Superior; C. T. Bundy, Eau Claire; John M. Whitehead, Janesville; E. P. Arpin, Grand Rapids; Miles Riley, Madison; J. R. Wheeler, Columbus, president Wisconsin Bankers' Association; H. A. Moehlenpah, Clinton; Ralph F. Skidmore, Marinette; A. W. Sanborn, Ashland; F. A. Aust, College of Agriculture.

YOU notice a fine regard for appearance among the officers from Roundsmen to Captain—that's one reason they are so keen for W-B CUT Chewing. The pass-word among these gentlemanly fellows is "If you won't take a little chew don't take any." No need to disfigure the face, when a nibble of *rich* tobacco gives *more satisfaction* than a wad of ordinary stuff—also less grinding and spitting. Take a tip from the officer on W-B.

Jefferson County Guernsey Meeting.

The Jefferson County Guernsey Breeders' Association held its fifth annual banquet on February 16, 1917, in the Methodist church at Ft. Atkinson, Wisconsin. One hundred and forty breeders and friends were present, some coming many miles to attend. After the dinner the guests went to the parlors where an interesting and instructive program was given. After several pieces of excellent music and interesting readings the speaker of the day, Mr. C. L. Burlingham, gave an inspiring address on "Dairy Interests."

In this address Mr. Burlingham told the breeders of the important place the dairy industry holds among other industries and urged for better, more productive herds and for greater economy in the production of dairy products. He explained how the Babcock test and the use of high-class pure-bred bulls were the quickest means of improving the dairy herds. He then urged the selling of the poor producing cows to the butcher and not to outsiders. He pleaded for a high-class business policy in disposing of stock. In closing Mr. Burlingham showed the value of co-operation in the dairy business, citing many possibilities for the future of the Jefferson County Guernsey Breeders' Association.

After the address an enthusiastic business session was held, at which the board of directors was elated. The newly elected board then elected the following officers for the coming year: W. J. Heid, president; E. H. Lewis, vice president, and H. A. Main, secretary-treasurer.

It was voted to tax each member according to the size of his herd to raise money for the purpose of hiring the secretary to act as field man. He is to assist in organizing cow-testing associations, calf clubs and to help the members co-operate for the general advancement of the association.

Brown Swiss Cattle Interests.

To the Editor:—The Brown Swiss cattle interests of the state have made excellent progress during the past year. There are now more than 150 breeders of Brown Swiss cattle in the state. During the past year sixty-five Brown Swiss cows were tested for advanced registry and sixty-three of them qualified. This is said to be an unusual record. There is no question but that the Brown Swiss cow has come to Wisconsin to stay, and to hold a place with the other dairy breeds of this state. The fast that the Swiss cattle were developed in a climate similar to that of Wisconsin makes them unusually well fitted for the country.

H. C. Taylor,
Secretary Brown Swiss Cattle Club of Wisconsin.

E-B Disc Harrow
ALWAYS FITS THE GROUND

The quick-acting lever lets you instantly level the cut whether in hard or soft ground. Saves time. Leaves the ground in fine shape. Low hitch and Emerson improved hardwood bearings reduce the pull on the horses. Dust proof bearings. All styles of disc and spike toothharrows. Write for catalog. Look for the trade mark. It's our pledge and your guide to quality.

Peerless FENCE WITHOUT A RIVAL

"Same in Sunshine or Rain"
Says Col. Experience:
"I have managed to keep my eyes and ears pretty wide open these many years and here is what I've found out: Through fair weather and through rain, through January's blizzards and July's boiling sun, Peerless Fencing Stays Put."

PEERLESS

is a name that stands for much value to every farm owner, and is worthy of your fullest confidence.

Peerless means Fencing and Gates of solid, heavy-gauge, open hearth steel wires, woven with a close, firm mesh, perfect rust resisting and anchored to stay by the famous Peerless Tie. Proof: Seventeen years of daily service on farms throughout the country.

Peerless costs less per rod than any other high grade Fencing and you'll find a Peerless Fence or Gate for every farm purpose.

Write for our big, free catalogue listing our entire line—right now before you forget it.

PEERLESS WIRE FENCE COMPANY
216 Michigan St., Adrian, Mich.

A ROLLER FEED MILL

WILL GRIND A WAGON LOAD OF FEED FOR 10 CENTS.

THIS is the **Famous Howell Roller Mill** you have heard so much talk about. The new improved mill for the scientific grinding of grain. Old style Burr and Stone Mills are out of date. Thousands of them are being annually replaced by the Famous Howell Roller Mills. Grind twice as fast as the best burr mill made. Does not heat the feed. Grinds Graham and Rye flour as well as feed. Has big capacity. Requires little power. No burrs or stones to wear out. Guaranteed to last a life time. Made in 13 sizes suitable for any size engine. Save one-half your time, gasolene and money by using a Howell Roller Mill. Write for Catalog F-16. We will send it free, together with the **Famous Howell Roller Feed Mill Puzzle.**

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments Diagnosed and Remedies Suggested in this Department.

Questions and Answers.

Sawing With Engine—Regulating Its Speed.

I have a two and one-half horsepower gas engine. I would like to know if this engine is large enough to drive a circular saw; and if so, how large a saw will it drive? The engine cannot be speeded up or slowed down while running because the governor is fastened on the flywheel. Is there any way to control this engine while running?

Answer.—Your engine is large enough to pull a 20-inch saw. To regulate the speed of your engine while running, arrange a stop to stop the control rod that regulates the fuel supply. This stop should be arranged so that when a collar on the control rod is against the stop, the engine will run at a certain speed. Disconnect the governor entirely, and change the speed by adjusting the stop. Or arrange a control like the throttle control of an automobile.

A Jump Spark Wiring Diagram.

I would like to ask the Farm Mechanics Department a question about a four-horse-power Olds gas engine.

FIGURE 1.

The engine has a make-and-break system on at present, but I would like to change it to a jump spark system. Please publish a wiring diagram.

Answer.—Figure 1 is a wiring diagram for the ordinary jump spark system. In order for you to use this system on your engine, it would be necessary for you to install a timer for the spark. Any device that would close and open an electric circuit at the proper time would be sufficient.

Another Tractor Hitch.

I saw in your paper where a man is asking for a tractor hitch to pull two disk harrows, side by side. During the past season I had some experience in using the hitch you illustrated, and will say that it did not work well for me. The trouble was that I could not turn at the ends of the field. I am sending you a sketch of a hitch that did work satisfactorily. The chains, C C, are

FIGURE 2.

three and one-half feet long. For seven-foot disks, make the distance, A, seven feet. Make A eight feet for eight-foot disks.

At the ends, do not try to make a short turn. When practical, start around the outside of the field. You will then have only a half turn to make at the corners. This is more satisfactory than to make a complete turn at the end of the field. I spent a half day getting a hitch that would work and a half day loss for a man with two disks and a tractor means considerable in a busy time.

Answer.—We are always glad to hear from our readers who have some ideas of their own obtained by experience. We are publishing the sketch in Figure 2. The above explanation is so clear that we have nothing to add. It would be well for our readers to try this hitch, especially where there is trouble in turning.

Fence Your Farm The "APEX WAY"

Save Work and Money

THESE two books will tell you how you can save work and money and have better looking fence the "Apex Way." Let us send them to you free. They show how easily you can put up APEX fence—how the "swinging joint" lets it fit hilly ground as readily as level stretches, and how it keeps its shape and always looks neat.

Save Post Hole Digging By Using APEX Steel Drive Posts

They cost less to use than wood posts and outlast a generation. Can be driven into any soil, gravel or soft shale rock. Made of elastic carbon angle steel—the strongest and toughest post material known. Use Apex Posts for your next fence—save work—save 8 to 10 cents in setting each post—have better looking fence—burn fence rows clean—ground the lightning and protect stock.

THE GENUINE SMITH STUMP PULLERS

W. SMITH GRUBBER CO
CATALOG FREE-DEPT. 48 LA CRESCENT, MINN.

National Dairy Show, 1917.

To the Editor:—The National Dairy Show of 1917 will be held in Ohio, at Columbus, October 18th to 27th inclusive, and will be larger and more intensely valuable and interesting than ever before. It will be held on the state fair grounds of Ohio, within the city limits of Columbus.

The Ohio legislature has just appropriated $200,000 for immediate construction of a most usefully appointed coliseum that the knowledge of man can conceive. This coliseum will be opened and dedicated to its work for agriculture by the National Dairy Show.

The central location of Columbus to the largest dairy section of the United States insures a greater exhibit of dairy cows than has ever been assembled, and the accessibility of Columbus for the dairy industry as a whole brings out the largest industrial exhibit any dairy show has ever housed.

There will be a display of motor trucks and tractors greater than ever assembled at any show, and a great pleasure motor car exhibit, for the reason that the people who furnish the greatest market of today for trucks, tractors and pleasure cars are of the dairy world.

There will be, in addition, a magnificent utility horse show, as well as an evening horse show, as Columbus is in the center of things for the work and pleasure horse.

Columbus has an equipment of buildings, grounds and hotels to make of this show one of the most remarkable show yard events of America, and it is so easy of access by the people of the wonderful agricultural territory represented by Ohio, Michigan, Kentucky, Indiana and Pennsylvania, and is the gateway between the Southwest and the East, making a trip to the show possible with less resistance than to any other place in America from the West, Northwest, South and Southwest, and there will be a half million people flock to this great show as the "agricultural mecca" of the year.

Dairy cattle men, whether showing on any of the fair circuits of the year or not, cannot afford to overlook bringing out their cattle to this show. It will afford a lifetime opportunity for comparison of cattle and making the acquaintance of men from all over America.

It offers a rare chance for dairymen to advance the cause of dairying in the great agricultural territory of central United States. This alone should call for lovers of the dairy cow and dealers in dairy supplies to rally as never before.

The horse men will meet more real farmers searching for their needs at this show than at any other fair or show of the year, and the motor and tractor people will meet and talk to more prospective buyers than will attend all other fairs and shows combined. The basis for these assured statements is that this is the one great fair and show of the year that is devoted exclusively and entirely to dairy educational purposes. The exhibitors do not have to compete with large city attractions and the useless distractions of the average fair. Nothing but the real purpose of presenting to the people of the country those things that are essential to their well-being is considered in making up this great show; hence the people come.

Remember the date—October 18th to 27th—Columbus, Ohio, and plan your year's work accordingly.

W. E. Skinner,
General Manager National Dairy Show Association.

Calf Losses.

To the Editor:—"I should be afraid to go to that man's herd to buy a calf."

That is what I heard a certain man say, in speaking of a herd of pure-bred stock, and the reason he gave for not wanting to buy of that farmer or to have any friend of his buy, was that the cows of the herd in question were apt to lose their calves from abortion. It is pretty evident that the man who has that reputation, and in whose dairy the facts warrant that reputation, must be a heavy loser, not only in the number of calves he might have otherwise to sell or to keep but in the estimation of his neighbors, who suspected that their friend's stock was subject to this disease.

What can we do to prevent this particular kind of loss among our calves? There is a kind of abortion which is not contagious, but which comes from injuries of one kind or another. The best we can do in such a case is to do our best to ward off harm. Icy yards have much to do in such cases.

But where the disease is without doubt contagious, more radical treatment is necessary. In the first place, it is best to send for some good veterinarian. He will no doubt say we must clean up, and that is good advice. Every particle of straw, chaff or other bedding that has been around an aborting cow ought to be taken up and burned. All animal matter, even to the blood which may be found on floor or siding should be washed off with a good disinfectant and the water put where nothing will ever come in contact with it. For this purpose we may use antiseptics and follow with lime.

The cows which are affected ought to be taken out of the herd and stabled by themselves. This in itself is one of the best ways of insuring other stock from the appearance of abortion. Particular pains must be taken to see that no stock is brought on the farm which is affected, or which has come from a stable where they have had the trouble. It is well to bear in mind that young cows are peculiarly subject to the disease.

The reproductive organs of the animal affected must be carefully washed with a good disinfectant, but this ought to be applied as well as prepared under the direction of a man who knows his business. It will not do to take chances in such an important matter.

But the best cure is prevention. If we are all the time on our guard we are not apt to have trouble this way. No bull which is suspected of having been inoculated with this disease ought to be used. No cow should be brought from a diseased dairy. No remains of diseased matter should be tolerated in one's stable a minute longer than is necessary. Even contact of the genital organs with woodwork that has abortion germs on it may transfer the disease.

The man who has this trouble

This "Warning Signal"

Insures proper speed on every NEW De Laval Cream Separator

NINE people out of ten turn the separator handle too slowly.

Thousands of tests with experienced separator operators show this to be the case.

Other tests made by the highest authorities have shown conclusively that there is a big cream loss when the cream separator is not turned fast enough.

You will avoid such a possible cream loss if you buy the New De Laval. The Bell Speed Indicator on the New De Laval is a "warning signal" that insures proper speed at all times. No matter who runs your De Laval, this "warning signal" will tell you when the speed is not right. You hear it, and do not need to see it. This one feature alone may easily save you the cost of a cream separator in the next few months.

But that is only one of the big advantages of the New De Laval. Other advantages are greater capacity, closer skimming and easier turning, simpler bowl construction, and easier washing.

If you haven't the spare cash right now, that need not stand in the way of your getting a New De Laval right away. We have an arrangement with De Laval agents which makes it possible for any reputable farmer to secure a De Laval on the partial payment plan—a small payment at the time of purchase and the balance in several installments—so that your De Laval will actually pay for itself while you are using it and getting the benefit from it.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for any desired information.

Save Money on Silos - Buy Direct from the Factory

Best Silo—Costs the Least, Too!

We can prove that the H-L-F Silo is the best silo made. It will last as long as any silo, no matter how expensive. It is a building rather than a barrel—can't shrink apart and blow over like a stave silo. And it will easily hold internal pressure that would crack cement or tile.

Costs less than other types because we sell direct from our big factory to you. Average saving is $100.00, compared with stave silos—and often twice as much.

Far Stronger and Freeze-Proof

Massive four and six yellow fir studs extend from top to bottom. Strong double wall of matched lumber makes silo everlastingly strong and tight, **and absolutely prevents frozen silage.** Eight strong hoops give extra guarantee of strength, and need never be tightened or loosened.

Last call for Free Roofs

You have just time to answer this advertisement, get the big folders and place your order before withdrawal of free roof offer.

Mail the Coupon

Don't wait another day to get the facts and figures on H-L-F Silo—find out why we claim it is **best** as well as **cheapest** for you. Mail the Coupon today.

Are Your Cows a BURDEN?

Many cows are a constant drag on their owners when they could just as well be good producers—if properly handled.

Don't forget that your cows can get physically "off color" just as you sometimes do. Watch the milk yield; if it is going down without apparent reason, somehing is wrong with the cow. Overfeeding is likely to make the condition worse; she needs a medicine that will clear up and strengthen her organs of production.

Kow-Kure is making thousands of new friends among the best dairymen every year, because it supplies this great need. It is a cow *medicine*, pure and simple—not a food. It has great curative and tonic powers that immediately act upon the digestive and genital organs and enable the cow to thrive on her natural food. Kow-Kure has back of it twenty years of success in making backward cows profitable and in the prevention and cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Scouring, Lost Appetite, Bunches and other common ills.

You can buy Kow-Kure from the best feed dealers and druggists. Sold in 50c. and $1.00 packages.

Cow-Testing Reports.

Reedsburg Association.

To the Editor:—In January forty-seven cows in our association produced forty pounds of butter fat and sixteen of these produced over forty-five pounds. at the end of ten months' work our association is now about ready to reorganize into two associations. It appears that the increased interest which our members take in their cows and in the dairy business is more than sufficient to offset the dues of $1.25 per year per cow. One of our members tells me that his increased interest has resulted in 33 1-3 per cent addition to his cream checks. Last year his cattle stood out in the cold an average of five hours per day. Now they are out twenty minutes a day. It is such matters as these that increase the size of the cream checks. The following table gives the names and records of the cows in the association which have produced forty-five pounds of butter fat or over for the thirty-day period ending February 6, 1917.

Alvin W. Wardas,
Official Tester, Reedsburg Cow-Testing Association.

Cow Testing Is Gaining.

To the Editor:—In spite of the cold and stormy weather, the Baraboo Cow-Testing Association is steadily gaining in the number of high producing cows which is due wholly to the good feed and constant care these cows are getting. They are not turned out these cold days, like some cows you see throughout the country, but are kept in warm barns, where lots of light and ventilation is present. Neither do they get ice cold water to drink. They get the chill taken out of it and will drink more, as milk is 85 per cent water it is necessary they drink lots of good, pure water at the right temperature, in order to produce a large flow of milk.

Last month there were ninety-seven cows that gave thirty pounds; thirty-nine over forty pounds, and fourteen over 50 pounds of butter fat. Martiny & Son had the best cow, giving seventy-eight pounds; also the highest herd average, being 48.1 pounds of butter fat for twelve cows. Ed McGilvra had the highest average herd test of 670. He had one registered Jersey heifer twenty-one months old making 39.7 pounds of butter fat in one month. Her cost of feed was $6.80, leaving a profit of $10.49 for that month.

The following table gives the names and records of the cows in the association which have produced fifty pounds of butter fat or over for the thirty-day period ending January 31st:

Outsiders Want Tested Cows.

To the Editor:—Seventy-two cows in the Waupaca and Butternut Ridge Cow-Testing Association had forty pounds of fat to their credit for the month ending January 30th. Thirty-seven of these produced over forty-five pounds of fat. There were 358 tested showing that about one-fifth reached the forty-pound mark. The banner cow for the month was a grade Jersey owned by E. O. Frihart. She produced 1,187 pounds of 5.7 per cent milk, making a total of

Satisfaction guaranteed.* If your dealer hasn't them write for catalog and price to Dept. C. H. POUNDER, Station 13, Ft. Atkinson, Wis.

67.7 pounds of fat. This is a cow which Mr. Frihart bought for $65 a year ago and she is producing for him double the amount of butter fat which she produced for her former owner. Records which are being made in our association are attracting buyers from other states. Recently the department of agriculture of Oklahoma wrote asking for prices on Holstein cattle with association records. Prices were given and sixty-two cows, yearlings and two year olds were sold and these same people wanted two cars more of yearling heifers, but were unable to supply them in Waupaca county. We are anxious to have every dairyman with ten cows in this county to belong to a cow-testing association, so that we may be able to grade up the stock of this county to a high standard. As soon as we do this, we will have no trouble in disposing of surplus. We believe that belonging to a cow-testing association and having cows with records is an investment and not an expense to the dairy farmer.

The following table gives the names and records of cows in the association which produced more than forty-five pounds of butter fat during the thirty-day period ending January 30, 1917:

In Winnebago County.

To the Editor:—We had fifty-nine cows in the Winnebago County Association in January which produced forty pounds of butter fat or better. Mr. Chas. Ruelke's herd had the highest average, being 40.8 pounds. The following table gives the names and records of the cows in the association which have produced forty-five pounds of butter fat or over for the thirty-day period ending January 31, 1917:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Using the Hare For Food.

To the Editor:—I have always been a lover of pet stock and I saw an article in your paper recently by Mr. Hartmann on Belgian hares which hit me in a tender spot. Along in 1890 or 1891 I began raising the little pink-eyed white rabbits, and a few years later gave them up for the Belgians—not the Rufus Red, fine, rangy fellows that we have now, but a pretty nice pet, and great for eating. Talk about your spring fries, chicken isn't in it with a Belgian hare about three and a half or four months old, and why more people do not raise them for meat I do not understand. Take it in villages and small towns where a person has a small lot, they could keep a pair which with average luck would produce $80 or $100 of the finest kind of meat at very little cost.

As for food, nice, bright hay of any kind will do, but I prefer alfalfa or clover with oats, caring for them the same as you would sheep when on dry feed in the wintertime. They do well with carrots, sugar beets and mangles as green feed, but above all do not feed them cabbage or lettuce unless you want pot belly, which will soon turn into bowel trouble and then sure death.

I kept water before mine continually, also salt. Keep the hutches well cleaned at all times and so avoid sore hocks. Also keep them off the ground. A hutch 2½-2½x4 feet long makes a nice size for the does, 2½x2½x3 feet for the bucks. Have them made tight on two ends, the top, bottom and back so no draft can get to them. They cannot stand a draft or the heat, but will stand all kinds of cold. I have one doe that kindled in that cold snap this winter when it was 20 and 22 degrees, and I never had a doe do better or raise a finer litter.

The does and bucks should be separated when two or two and a half months old, never left longer than three months or there will be trouble. Never put young bucks and old ones together, for they will fight all the time.

When feeding to finish off for market I feed some corn and carrots every other day. M. M. Lanphere.
Rock Co., Wisconsin.

Use A Wood Tire Hollow Wall Silo

Cannot Sag, Blow Down or Rot.

Cures and preserves silage perfectly. Prevents freezing of silage. Easy to construct. A real farm building, permanent and rigid. No hoops to get loose. No guy wires. No staves to shrink or swell, but a smooth, double wall from base to roof, the inner wall being of *California Redwood*.

Guaranteed for 20 Years

"But Lasts a Lifetime" WOOD TIRE — AIR SPACE — INNER WALL — OUTER WALL

The patented wood "tire" is built up of inch boards, and shipped in sections. The boards overlap in step formation at both ends. When nailed together, these sections form a ring of unusual strength. The silo frame forms its own scaffolding.

Send for our folder which shows how the Wood Tire Silo is built, and also what owners think of them. A postal brings it. Write today.

Agents Wanted in unassigned territory.

World's Largest Exclusive Churn Manufacturers

Buy CAPACITY when you buy a Separator

Capacity to skim milk is what you are paying out good money for when you buy a separator—not just so much iron and steel.

If you pay $66.00 for a separator which will skim 600 pounds of milk an hour, you are paying for that skimming 11 cents a pound.

If you pay $75.00 for a 450-pound machine, you are paying over 16 cents a pound for identically the same thing.

That isn't good business—is it? That excess of 5 cents on every pound runs into big money in the course of a year.

Compare capacities when you buy a separator

Buy on this basis and you'll buy a Viking because the Viking gives you positively the greatest capacity for every dollar you pay. Capacities and prices of other standard separators prove it.

The Viking skims down to three one-hundredths of one per cent or better—mostly better. It is without doubt the closest skimming separator offered today; does better work; lasts longer; saves you money on the first cost—saves on repairs; and gives you the most for your money.

You should know more about the Viking

No dairy farmer should invest a penny in any separator until he finds out all about the Viking, the popular separator built by the Swedish Separator Company—factory in Sweden, and American offices in Chicago. Large supplies of spare parts on hand.

KALAMAZOO SILOS

Will Solve Your Silo Problems

They're built to meet the exacting farmers' needs and are the best in design, material and workmanship—combining every desirable feature a silo should have and embodying the "know how" acquired through more than twenty years experience in silo building.

Glazed Tile Silos

This construction is fire-proof, frost-proof, storm-proof, decay-proof, vermin-proof. Galvanized reinforcing. Requires no paint, no upkeep expense or repairs. First cost is the last cost—a written guarantee goes with every one.

Wood Stave Silos

Your choice of four time-defying woods. The Kalamazoo is the only factory where this outfit is manufactured complete from the raw material to the finished product. Our silos are quickly and easily erected by inexperienced home labor.

All Kalamazoo Silos are made with Galvanized Steel Door Frames, continuous doors, forming safe ladder entire height of silo.

Write today for our free descriptive booklet, and early sales plan.

KALAMAZOO TANK & SILO COMPANY, Dept. 107 Kalamazoo, Mich.

ROSS METAL In-de-str-uct-o SILO

The Silo that fills a long felt want. Results obtained from the use of a Metal Silo are far beyond expectation. Silage contains by far a larger percentage of food value, more uniform preservation, taste and color, naturally far more productive in results. The Most Permanent Silo because it

Can't Blow Down, Buckle, Twist or Collapse

Resists fire to the fullest extent and is storm proof. No skilled labor required to erect it. Can be increased in height at any time. Special IN-DE-STR-UCT-O Metal is warranted not to be effected by acid in silage or climatic conditions. The users of Metal Silos are our references. Our Testimonial and Construction Catalog is worth asking for, especially to those who desire to erect a Silo from the standpoint of permancy and 99% food value preservation. Agents wanted who are able to produce results.

Freight Paid East of Rockies

Made of Redwood covered with galvanized iron.

150 Chick Brooder

Ironclad Incubator Co. Box 113 Racine, Wis. (3)

Did You Have "Good Luck" With Your Chicks?

"Luck" with chicks starts with the incubator. If it is properly heated, **properly regulated,** and properly ventilated, your chicks will start off with vitality. They won't come out of the shell **half dead.** So many people trust their eggs to a cheap machine, forgetting that it is not only how many you hatch that counts, but how many **live and grow.**

Start Your Chicks With a Queen Constitution

The Queen has a reputation for hatching **strong, healthy chicks.** It is built of genuine Redwood—very scarce in these days of cheap substitutes. Redwood does not absorb odors from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, retain the odors to weaken and kill the hatching chicks.

Queen incubators are not cheap, but they are built to **hatch big hatches of chicks that live.** Book sent free.

Queen Incubator Co., 1175 N. 14th St., Lincoln, Nebr.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Hatching Chicks Early.

The advantage of hatching chicks early is that it gives a longer hatching season and thereby enables the poultry keeper to raise a larger number of chicks. On farms, where the hens alone are used for incubating purposes, this may mean almost doubling the number of fowls raised each season.

Many poultry raisers do not hatch chicks in February or March for fear of losing them on account of cold weather. This is a grave mistake.

If early hatched chicks have a good mother hen to brood them and a coop protected from the raw winds, there is no more danger of losing chicks at that time than there is later on. Low temperature is not half as dangerous to the health of chicks as drafts, dampness and lack of fresh air. A bracing cool air is invigorating and healthful, while dampness and a lack of fresh air causes sickness and death. Every season more chicks are killed by confining them too closely than by plenty of fresh air, even when the temperature is below freezing.

If poultry raisers use hens only for hatching purposes and they are able to get hens to set any time during February or March, they should hardly hesitate to raise early chicks for fear of losses from cold.

Getting an early start in this manner extends the hatching period at least two months at an invigorating time of the year. No chicks, as a rule, thrive better or make more rapid gains than early hatched ones. If poultry keeping is profitable on a utility basis, then a large increase in the number of chickens raised each season will increase in capital for outlay on more land, buildings, coops or other accessories of poultry keeping.

This gain in profits may come from two sources, either from the sale of the young cockerels as broilers, or from the sale of the pullets for egg production. The question as to the pullets must be solved by the individual poultry raiser. If more pullets should be raised as a result of early hatching than the poultry raiser requires for his own purposes, the surplus pullets can always be profitably sold for fall and winter egg production. As a rule, therefore, pullets may be regarded as more profitable than hens and they should only be sold in case the capacity of the poultry house demands that some shall be sold to avoid the danger of overcrowding. In that case, if they are of a recognized standard bred and of a good laying strain, early-hatched pullets command a much better price than later hatched pullets, because of their prospective value for the production of eggs in fall and winter.

Another item of raising early chicks is to secure eggs in the fall and early part of the winter. This is the recognized period of lowest supply. Strictly fresh eggs are scarcer in the fall than at any other time of the year. The reasons are that most hens are molting and pullets have not begun to lay.

There are, therefore, great advantages in hatching chicks early not only as a means of solving the problem of egg production in the fall, but also adding to the poultry keeper's income. Early hatched chicks require only a little more care than later hatched chicks, but the results in eggs and income during the fall months, when egg prices are always high, make the extra attention well worth while on the part of the poultry keeper.

The Price to Ask For Eggs or Chicks.

Many poultry keepers are usually somewhat puzzled as to what is a fair price for eggs for hatching and baby chicks. Of course, this will depend on the quality of your breeding stock. If your stock does not have sufficient quality to make the eggs worth a fair price it would be better not to sell them for hatching. Many use the eggs from all their hens, making no special mating or selection. In such flocks there are always some poor layers, and this would be unfair to the purchaser.

The eggs which come from such stock are of little value. They are the same as the owner sells for market eggs and are worth very little more than market price. There may be some good birds in the flock and they may all be pure blood, but the buyer will have to hatch and grow so many to get a few good birds that it would be a losing game to the buyer. The buyer had better pay more for fewer eggs and save the labor of hatching and growing worthless stock.

Then we must bear in mind that only about half the eggs the hens lay are fit for hatching. Taking these out reduces the value of the market eggs. The market value of eggs during the early hatching season runs from 30 to 45 cents per dozen, while during the latter part of the hatching season they drop as low as 25 cents. This brings the cost of hatching eggs from 40 to 80 cents per dozen. The price of eggs per setting from good, mated stock should bring from $2 to $5, according to quality. One should avoid the two extremes of asking too low or too high a price. Of course, breeders with wide reputations ask $10 to $25 per sitting

Wisconsin Wins In Big Hatching Contests Every Year

Why Pay More

For only $10 you can get these two prize winning machines, delivered, freight paid east of the Rockies. You take no risk—money back if not satisfied. You can order direct from this ad. Ask the publisher about us.

of eggs, but the average person cannot.

Chicks are usually worth twice the price of eggs.

The Hatching Season.

To the Editor:—The hatching season is getting near. I will give you my way of hatching chicks. I am a breeder of Single Comb White Leghorns. They hatch almost every old way, but I am a great believer in the old hen. I think the chicks will mature quicker and will be stronger birds. I hatch all my fancy stock with hens, for show purposes. My farm flock I hatch with incubators. I have a thirty-six-acre poultry farm and I raise White Leghorns and no other. They are the egg machines and for fancy and show purposes there is nothing better. I am getting eggs all winter, when eggs are 50 cents a dozen. I have good luck with the machines. I fill the machines with eggs and run it for three days at 120 degrees. Do not touch the eggs. Then turn the eggs up to the eighteenth day twice a day. After the first week I run it up to 103. The eighteenth day I take a pie tin full of hot water, put it under the egg tray and leave it there until the eggs start pipping. Then take it out. It will soften the shell. I have fine luck this way. Do not open the machine any more than necessary. When the chicks are all hatched have the brooder not less than 90 degrees on the floor of the brooder. Don't feed for thirty-six to forty-eight hours. At first feed a little hard-boiled egg, grit and water. Have water lukewarm. In a day or so give plenty of fresh buttermilk. Buttermilk will prevent bowel trouble. Be sure to have brooder warm enough or they will have white diarrhea in your flock. I have had experience with brooders. Feed lots of green food, such as lettuce and dandelion, and keep the brooder clean. Spray every day and put clean litter in and you will raise some nice, healthy chicks. Head lice on chicks have got to be watched. I have found that lard will keep them off for a day or so, but Licene keeps them off for good. For lice on old birds I have been using Licene, and I have had no lice on my birds. For mites I paint the roosts once a week with kerosene and a little crude carbolic acid and I clean the dropping boards at least once a week.

If these directions are followed you will have nice, healthy chicks and get eggs when the price is the highest.

E. F. Pomplin.

Fond du Lac Co., Wisconsin.

Nitroglycerine vs. Ammonia

The word "nitroglycerine" has so thoroughly permeated American thought about explosives that most farmers are prone to believe that for blasting there are no other powders made, or at least that no others equal the nitroglycerine powders in effectiveness and strength. The idea is in serious error, especially at this time, when the war has sent the price of all explosives skyward.

Nitroglycerine dynamites and powders are reliable and strong, but they are violent in action and tend to shatter to dust any material close to the charge without reaching out very far from the charge. Another material much used as an explosive base of late years is ammonium nitrate, and powders made from it have an entirely different action from nitroglycerine powders. Where the latter shatter the former crack; where the latter tear and pulverize the former lift and split.

In soil the action of ammonia powders is to break and crumble it for long distances underground. Under stumps the ammonia powder tends to yank out roots from deep under the ground and to split the tops into several pieces. It does not create such large cavities in the ground as the other type of explosive, nor tear off the roots too near the surface. For these reasons ammonia powders today are better explosives for soil and stump blasting than nitroglycerine explosives.

For boulder blasting, on the other hand, you want the shattering effect, and nitroglycerine powder has more of it than ammonia powder, but in practice a high percentage ammonia powder is found to break boulders with entire satisfaction.

There is another reason why ammonia explosives are preferable for farm blasting. The price of nitroglycerine has gone so high that the development and improvement of blasting explosives lately have nearly all been confined to the ammonia types and the result is a special "farm powder" that is greatly superior to old forms of dynamite. It is safer owing to its being less sensitive. It seldom requires thawing, owing to its chemical nature. It has all of the lifting and cracking action for which ammonia powders are famous instead of the shattering action of high percentage nitroglycerine dynamites.

As a practical illustration of the work of the two types of farm blasting explosives the making of a ditch can be taken. If the ground is full of water it can be blasted by the transmitted detonation system of loading, provided straight nitroglycerine powder of 50 per cent or greater strength is used. But the same ditch also can be blasted with 20 per cent ammonia powder, using the electric system of firing and loading, and the cost of the latter way of making the ditch will run from 10 per cent to 40 per cent less than when nitroglycerine powder is used.

The Minnesota state game and fish commissioner, Carlos Avery, is asking organizations of game protectionists, farmers, citizens in general, bird clubs and all others who have the good of the state at heart, to help care for the birds who are in danger of starvation in cold weather. He also asks for reports from clubs or from individuals on the success of work for the birds, and for information as to methods used.

THE FARMERS' MARKET

FARM LANDS.

NORTH Dakota in all essentials—soil climate, crops, people, is a second Iowa. Because of heat, wet and rust the 1916 grain crop of North Dakota was short, yet government reports show $167,544,000 or $2,253 per average farmer. In last 7 years average farmer in North Dakota produced $4975 worth of crops, in South Dakota, $1,639; Iowa, $1,631; Illinois, $1,437; Minnesota, $1,396; Wisconsin, $901. Now is time to get North Dakota land, while price is low. No commission to us. Great opportunities open. Write for our direct dealing plan, booklets, maps, etc. J. S. Murphy, immigration agent, Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minn.

THE rich grassed lands of Aitkin county present the best opportunity in the country today. People are recognizing this fact. That is why they are coming so fast. These lands don't cost one-half what other lands no better, or better situated, cost, and besides, you buy from our company, the terms are easy and we help you in many ways to get a start. Write for information and maps. Arnold, land agent, Rock Island Railway, 153 Wolvin Bldg, Duluth, Minn.

MR. Renter, Investor, Laborer—Will sell Sec. 3, 9, 11, 13, 15 & 25, town 12 W., R. 31 E. Rosebud county, Mont., for $4.50 per acre. Easy terms. Good, productive land. Wheat, Oats, Alfalfa, Barley, Potatoes. All vegetables grow to perfection. One crop pays for land and gives you good bank account. 12 mi. from town on main line of M. W. & St. P. An opportunity like this seldom if ever appears. Direct owner, a farmer, at Box 45, Mt. Hope, Wis.

FARM of eighty acres, good buildings, ¾ mile to school, 1½ miles to creamery, about 30 acres under plow, 10 more ready, balance easily cleared, and good pasture, 6 miles west of Medford, Taylor county, Wisconsin, county seat. $6,000, will take in exchange to the extent of $3,000 first-class city property. Will rent three years at $325 per year. L. A. Kimball, Lake Geneva, Wisconsin.

LANDOLOGY, a magazine giving the facts in regard to the land situation. Three months' subscription, FREE. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter and say, "Mail me LANDOLOGY and all particulars FREE." Address Editor, Landology, Skidmore Land Co., 310 Skidmore Bldg., Marinette, Wis.

DON'T buy Wisconsin Land till you have seen ours. We own 20,000 acres choice clay loam, hardwood lands on the Omaha & Soo roads. Close to towns, schools and churches. R. F. D. and telephone lines. Near, beautiful lakes and streams. Lowest prices—Easiest terms. Agents wanted. Upper Wisconsin Land Company, Ladysmith, Wis.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

80 ACRE snap. 40 acres under cultivation, clay loam soil, gently rolling, orchard, buildings, town 3½ miles, school ½ mile. Price $2,700, $700 cash. The Ev. Luth. Colonization Co., 1029-M, Dept. 10, Merrill, Wis.

ONE hundred twenty acre farm one-fourth mile from Ladysmith, Wisconsin, sixty acres under cultivation. Loam clay soil. Price $6,000, $2,000 cash. Balance on easy terms. Manning & Swaim, Ladysmith, Wisconsin.

WHY pay big commissions to land agents? Sell your farm direct. No middle-man. Your own price. You can do it. Particulars free. Address Chas. Renich, G-2, Woodstock, Illinois.

354-ACRE stock-grain farm, Pierce county, 30 miles St. Paul. Large, modern house, tenant house, good buildings. $100 per acre. F. D. Bailey, Prescott, Wis.

EIGHTY acres sugar maple, clay loam land with house, barn and clearing. $25 per acre, small payment down. Frank M. Doyle, Ladysmith, Wisconsin.

40, 80 and 120 acre improved farms for sale. Well located with or without stock and machinery. Must sell. Address owner. L. B. 165, Greenwood, Wis.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

SUNNY south, free views 160 valley farm, fruit, spring, $2,500. Terms. Arthur's, Mountain View, Mo.

BUSINESS CHANCES.

Takes Out Every Wild Oat

Take Out Every Wild Oat—No Matter How Badly Mixed—With

Owens Grain Graders and Cleaners

They are the most complete and successful line of Grain and Seed Mills ever put on the market. They will take out every weed seed and impurity, and grade your grain for the market. They will positively rid your wheat of **cockle, wild pea, buckwheat** and **mustard.** They chaff and clean wheat, corn, oats, rye, barley, beans, timothy, clover, millet, flax, alfalfa, and all other kinds of grain and seed. The Owens is the absolutely reliable machine for northwestern crops.

Owens "New Superior" Grain Grader and Seperator

Sow Plump, Healthy Seed

Give your land a chance to produce a real crop. Clean and grade your seed and be sure you are planting just what you want to harvest—not weed seeds. Also be sure you plant plump, live, vigorous kernels. You are not running an experiment farm or a hospital. C. F. Chase, Assistant Professor, Agricultural Engineering, North Dakota Agricultural College says that:

Northwestern grains are infested with mustard, wild oats, kingheads and other weeds, and a grain cleaner would solve the problem. The Wisconsin Agriculturist says: "Grain of high quality cannot be produced from mixed seed. Unless the very best kind of seed is used, the results will be indifferent and unsatisfactory. The best investment a farmer can make is to buy a good fanning mill. Such a mill will more than pay for itself in one season."

Send for the free Owens Book and get the details of our Special 1917 offer.

J. L. OWENS COMPANY, 1127 DARTMOUTH STREET, MINNEAPOLIS, MINN.

WARNING On account of the drouth last season, much of the grain is weak and undeveloped. Don't plant poor, undersized seed and cut your crop in half. Grade everything, and plant only strong well developed kernels that will grow. The farmer who does this will pay for his Owens Mill several times over in next season's crops.

IOWA'S GREATEST EARLY OATS! A special offer on Iowa No. 103 Seed Oats. Experiments made everywhere in the corn belt and by plot tests at Experimental Stations prove it outyields other varieties from 5 to 25 bushels per acre and has been proven the right oats for the corn belt. Farm and Garden

To Treat Cabbage Seed.

Many Wisconsin gardeners and truck growers intend to treat their cabbage seed with formalin solution this season as a means of checking serious damage to their crops from black rot and black leg diseases.

The disinfection of cabbage seed is equally as important as seed treatment for grain smut and potato scab, a common practice on many Wisconsin farms, and known to give big returns on the time and money so invested.

Directions for the use of formalin or formaldehyde in the treatment of cabbage seed have been prepared by R. E. Vaughan, plant disease specialist, college of agriculture, University of Wisconsin.

"Take one ounce of the strong (40 per cent) solution and mix in two gallons of water in any ordinary tub or pail. Then take the seed to be treated and put it loosely in a cloth sack which should be tied up and placed in the diluted solution of formalin for twenty minutes. The seed should be stirred around in the solution so as to make sure that all the seeds are entirely wet.

"When the twenty minutes are over rinse the seed in clear water to remove the formaldehyde and dry at once by spreading on clean papers, canvas or floor. After drying the seed is ready to be put in the seeder or when thoroughly dry can be stored for future use."

Mr. Vaughan gives these few cautions:

"Don't freeze the wet seed.

"Don't return the treated seed to the original packages, because of danger of re-infection.

"Don't leave the seed in the solution more than twenty minutes.

"Don't make the solution too strong, as overtreatment injures the vitality of the seed.

"Don't forget that seed treatment cannot eliminate the diseases which may come from infected soil, neighboring fields, or from farm machinery, tramping feet or insects."

That Hotbed.

The last of February means that the preliminary garden work cannot long be delayed. In fact, it has already begun a few degrees south. For the main crop of hotbed plants allow six weeks from the time seed is planted to have them ready for the open ground. If it is safe to set tomato and cabbage in the field May 1st, then your hotbeds should receive the seed March 15th.

If you begin operations March 1st you will have ample time to excavate, haul manure, prepare frames and sash, put on the dirt, settle it and get the heat started. It usually takes from two to four days for the beds to heat up after sash are placed.

It pays to be careful in the preparation of the bed. Fresh horse manure is needed and it should be taken from stables where plenty of bedding has been used; half of the material should be straw or hay. Use no coarse weeds or stalks.

Do not use manure piles which are smoking, for that means that they have already been heated and will never give heat again. This is an important point, and many an amateur has been disappointed by a cold hotbed because he was not careful to get perfectly fresh manure. You can tell when manure has lost its usefulness for the hotbed by its appearance, for if it has been through a dry heat it will have a white, moldy appearance. If it has been through a wet heat it will blacken.

Usually if manure is gathered from the open it will be wet enough to heat up, for a certain amount of moisture is needed. But if it is taken from under cover it is often too dry to heat and retain heat. Turn the hose on the dry material, but do it before placing in the beds. If in the bed excavation it is likely to get too wet. Pile it in some place where the surplus water can drain off and in a few days it will be ready for use.

Practice varies a good deal at this

MAULE'S SEEDS

The Gardner Nursery Co., Box 435, Osage, Iowa

point, for some fork over and mix the manure several times before putting it in the beds. This secures a more even heat, but the need of it depends much upon the condition. When dry, or frozen, or very coarse, it needs more mixing than when fine and of an even texture.

When putting the manure in the bed tramp it well. If packed solid it will retain the heat far better than if placed loosely. Also the amount of heat will be proportioned to the depth of the bed. A depth of manure from twelve to eighteen inches after it is packed will make a bed which will last six weeks. If you are growing something which only needs heat for two weeks, say a crop of radishes, six inches of manure will do.

Do not make the mistake of using cow manure as a mixture, for there is no latent heat in it.

This writer once hired a man to haul horse manure and he mixed in a lot of cow stable litter, saying, "That's richer and much better for you." He had to be informed that he wasn't hired to boss the job, but to do as he was told.

Use plenty of dirt over the manure, for a shallow seed bed makes poor plants. The soil should be rich, but with an admixture of one-quarter sand. Half good garden soil, then the sand, and then as much well-rotted compost is about right. Let the depth of this over the hot manure be never less than four inches. Some advise six inches, but we have excellent results with four inches evenly placed.

The location of your hotbeds is an important consideration. Land sloping toward the sun is good, but if your land is level you can make the beds sloping. Do this so as to get the full power of the sun's heat. Then locate them so that they will have shelter from the cold north and west winds. Barns, or other buildings, high fences, or even a hedge will be a great help.

Reduce Expenses of Living With a Garden.

To the Editor:—Considering the amount of money many farmers have paid out the past year for high-priced foods, and with prices gradually going higher, it is the writer's humble opinion that by raising a good garden this season the expenses of living would be reduced to such an extent that many persons would open their eyes in amazement. The quantity of vegetables that a really good garden can afford the year round is astonishing.

By a really good garden we mean one that will furnish the family with an abundance of vegetables all through the growing season from the earliest hotbed lettuce, radishes, etc., to the winter's supply of late-grown cabbage, potatoes, turnips, etc. A small bed of asparagus and rhubarb would furnish a family with many appetizing dishes so early in spring that no garden should go without these, and a bed of each when once started will last for years. Rhubarb, asparagus and such vegetables as tomatoes, corn, beets, peas and beans may be canned to last until new ones come in again.

I clean my garden plot off in the fall and destroy many harmful insects by gathering and burning the bean vines, etc. During the winter I put all the chicken manure saved during the summer upon the garden, besides covering the ground liberally with stable manure, which is plowed under as early in the spring as the weather will permit (which is usually the first of March), but rebreak at the time of planting.

Beginning in February I sow in a hotbed such seeds as lettuce, radish, early cabbage, tomato and sweet pepper. In four or five weeks I am eating tender, crisp lettuce and radishes, while the other named plants are making a good growth and are ready to set in the open as soon as the danger of freezing is past. I plant peas and onion sets out in the open as early as March, as these are not injured by cold or dampness. I raise all kinds of early and late vegetables. I plant all my garden in long, straight rows. This way much of the cultivation is done with the horse and plow, which is a saving of labor as well as being an advantage to the growing plants, especially during a dry season.

I begin gardening in earnest about the second week in April, as at this time the ground begins warming up, making it safe to plant such seeds as beans, cucumbers, beets, sweet corn, etc. Another sowing of cabbage and tomato seed is made for late in the open at this time. The early cabbage, tomatoes and sweet peppers started in the hotbed are now set out, making room for the sweet potatoes which are bedded soon in the same hotbed which started the above-named plants. I raise bunch and pole beans, also bunch limas and butter beans, making a succession of plantings of the bunch sorts all through the growing season. I also plant sweet corn at intervals of two weeks until August and keep the table supplied with juicy roasting ears until frost.

I can a sufficient amount of sweet corn, tomatoes, beans, peas, rhubarb and asparagus to supply all needs during the winter and early spring. Besides, I make kraut, put up cucumber and mixed pickles of all kinds. No one who has had such an experience as mine in growing a fine garden for their summer and winter needs will dare say that it does not pay. Try it this spring and prove to your own satisfaction that a garden will pay for itself ten times over.

In order to have a good garden select the richest spot of ground upon the farm (if near the house so much the better). Make it still richer by applying chicken and barnyard manure. If such manure is not available use commercial fertilizer. You cannot make the garden spot too rich. Break the ground with a two-horse plow as early in spring as possible. Harrow and work the soil until you have a deep, mellow seed bed. Plant tested seeds (I always save the most of my own seeds and know just what I am planting), which means to order them early and test them yourself. Do your planting carefully and when the plants are up keep them free from weeds by frequent cultivation. Work early and late and you will be convinced that you have scored at least one point in helping to reduce the high cost of living. S. E. M.

One day last week a Missouri farmer came into a Kansas City bank and said he wished to pay off a $10,000 mortgage loan on his 160 acres. The loan was made just two years ago when the farmer bought the land, paying $21,000 for it. He had made enough out of three crops of wheat to pay the mortgage. He held his crops of 1914, 1915 and 1916 until recently, when he sold them at $1.75 a bushel. He had been a tenant on the land before purchasing it.

Ask your neighbor to subscribe for The Wisconsin Farmer.

What Seed For *Your* Drill?

YOUR PROFITS at harvest time will depend largely on the seed that goes into your drill or seeder this spring. At present high values it will take only a moderate part of the yield to pay for growing the crop. The rest is clear gain.

The difference in cost between unidentified seed of unknown quality and Northrup, King & Co.'s recleaned, tested seed is only a few cents per acre. Yet, a few more bushels of grain or a load or two more of hay per acre will make a big difference in your net returns from the crop.

Decide now to sow the seeds which have proved reliable—seeds which have produced money-making crops for over 30 years. They are sold by merchants in nearly every community of the Northwest. Ask your dealer for

THE ADAMS SEED COMPANY, Box 50, Decorah, Iowa

ALFALFA

Prof. Hansen's Wondertul Cossack Alfalfa

IS a big, vigorous strong rooted variety, well adapted for the most rigorous climates. Realizing the great wealth producing qualities of an Alfalfa hardy enough to withstand the rigors of the Northern Winters, the Department of Agriculture of the United States Government selected the most capable man in this country to explore Northern China, Siberia and Asiatic Russia to secure these seeds. As a result of four different trips, enduring the most severe hardships, Prof. N. E. Hansen brought to this country the Cossack Alfalfa.

PROF. HANSEN'S COSSACK ALFALFA

I have tested it, tried it out under the most adverse circumstances, and can therefore strongly recommend the Cossack Alfalfa Seed to you. You sow your field once and for 30 years all you need to do is to harvest your crop and pocket your returns. I am making you a special offer of 10 lbs. Genuine Cossack for $15.00, and with every order I will present you with one-half bushel New Iowa 103 White Kherson Oats. Reserve your 10 lbs. at once. I will ship it at any time you specify, but order now.

Do You Realize

That Improperly Painted Walls Are Disease Breeders?

Health Commissioner Emerson of New York City declares that a large percentage of tuberculosis might be eliminated if walls, ceilings and floors were properly painted with paint that would stand frequent hot water scrubbing. Many disease epidemics, he adds, might be checked if walls were kept in a sanitary condition.

HICKORY

"99" Wall Finish

is ready to help you. Ready to make your home more beautiful and to protect it. HICKORY "99" is finest finish for walls and ceilings you ever saw. Dull toned and washable. Costs less than wall paper. How to Use the Fireless Cooker.

Obviously the fireless cooker must be used with intelligence to obtain the best results. It is best suited to those foods which require boiling, steaming or long, slow cooking in a moist heat. Foods cannot be fried in it, pies cannot be baked successfully in the ordinary fireless cooker, nor can any cooking be done which requires a high, dry heat for browning. Meats, however, may be partially roasted in the oven and finished in the cooker, or may be begun in the cooker and finished in the oven with much the same results as if they were roasted in the oven entirely. The classes of food best adapted to the cooker are cereals, soups, meats, vegetables, dried fruits, steamed breads and puddings.

When different foods are cooked together in the fireless cooker they must be such as require the same amount of cooking, since the cooker cannot be opened to take out food without allowing the escape of a large amount of heat and making it necessary to reheat the contents. It would not do to put foods which need about one and one-half hours to cook into the cooker with a piece of meat which would stay several hours.

The size of the container used in cooking with the fireless cooker should be governed according to the amount of food to be cooked. Small quantities of food cannot be cooked satisfactorily in a large kettle in the fireless cooker. If a large kettle must be used better results will be obtained if some other material which holds heat fairly well is used to fill up the empty space. This may be accomplished in several ways. One is to put the small quantity of food to be cooked into a smaller, tightly closed, kettle, fill the large kettle with boiling water and put the small kettle into it, standing it on an inverted bowl or some other suitable support. This boiling water will take up and hold the heat better than air would. Several smaller dishes (if tightly covered) may be placed in the kettle surrounded by boiling water. Baking powder or other tins often are found useful for this purpose. Another way is to place one food in a basin which just fits into the top of a large kettle and to let some other material, some vegetable, perhaps, cook in the water in the bottom of the kettle. Two or more flat, shallow kettles placed one on top of the other so as to fill the cooker enable one to cook small amounts of different foods successfully. Such kettles, made especially for use in fireless cookers, may be purchased

The time which each kind of food should stay in the cooker depends both on the nature of the food and on the temperature at which it remains inside the cooker, and before recipes for use with the fireless cooker can be prepared one must have some means of knowing how temperatures are preserved in it. In experiments made in the office of home economics a six-quart kettle was filled with boiling water and put into the cooker, the packing of which happened to be newspaper. The temperature of the water, which was 212 degrees Fahrenheit when put into the cooker, was found to be 172 degrees Fahrenheit after four hours had elapsed and 155 degrees Fahrenheit after eight hours had elapsed. This shows the advisability of the common custom of allowing food to remain undisturbed in the cooker for at least six or eight hours, or in some cases overnight. If a soapstone, hot brick or other extra source of heat is used, less time will be required. Materials which are denser than water (sugar sirup as used in cooking dried fruit), and, therefore, can be heated to a higher degree, will keep up the temperature longer when put into the cooker. Thus the density of the food material, as well as the amount and the length of time that the apparatus retains the heat, must be taken into consideration in determining how long different materials must be cooked in the cooker.

The recipes for dishes to be prepared in the fireless cooker differ somewhat from those for foods cooked in the ordinary way, chiefly in the amount of water or other liquids called for. Less liquid should be put into the food to be prepared in an ordinary fireless cooker, since there is no chance for water to evaporate. The cook must be guided largely by experience in deciding how long the food should be heated before being put into the cooker and how long it should be allowed to remain there.

much to know if this can be done and, if so, by what method.

If any of our readers have had any experience along this line we would be glad to have them tell how it is done.

Recipes.

Bacon and Scrambled Rice.—Eight slices bacon, two cups boiled rice, four eggs. Fry bacon carefully so that it shall be crisp and attractive. Arrange the slices around the edge of a platter. Leave half the fat from the bacon in the frying pan and add two cupfuls of boiled rice (all the grain separate), into which eggs have been stirred. Fold the rice in the bacon fat until egg is set, then heap it in the center of the platter.

English Pork Pie.—Two pounds lean fresh pork, four eggs hard cooked, two small onions, one level teaspoonful salt, one-fourth teaspoonful pepper, one-half teaspoonful ground nutmeg, plain pastry rolled rather thick. Stew pork slowly about forty minutes in salted water or stock to cover, let cool in liquid, then take out and cut into cubes. Put meat in deep baking dish and cover sliced eggs. Strain liquor, add other seasonings, thicken with flour (if liked) in proportion of one tablespoonful to one cupful of liquid, and pour into pie. Cover with pastry, perforated for escape of steam, and bake twenty minutes. or until brown.

THE YOUNG FOLKS.

The Twins.

Their names were Fanny and Fred, and they were two of the most mischievous children that ever lived in the state of Michigan.

Fanny and Fred were playing in the garden. Their mother had left them there while she went away to the neighbors, and had said, when going, "Don't go out of the garden. I will not be gone long." Fanny and Fred both said they would stay in the garden and kept their word until Fred said, "Let's go and get some flowers; there are lots over in the big fields."

So the twins climbed over the stone fence and went hurrying down the road toward the country. After they had been walking along the road for half on hour Fanny said to Fred, "I am getting so tired." Fred stopped then and said, "Well, you stay right here and I will go and get the flowers," and then he went on while Fanny sat down on the trunk of a tree.

The sun was setting behind a row of poplars and Fred had not yet returned. Fanny was getting restless. She started down the road. Everything went well until she came to the crossroads. She could not tell which road they had come and so she turned into the one she thought was the right one.

Now we must go back and see what Fred is doing. When Fred came back to the place where he had left Fanny and found her gone he did not know what to do. He looked this way and that, but could not see her, so at last, being a brave lad, he started down the road to find her. He walked and walked. It kept getting darker and darker, and yet he didn't see anyone or anything that he knew.

Now, while the children were wandering about, their parents were getting more and more excited. When their mother had returned that afternoon she supposed the children had gone over to some of the neighbors to play, as they often did, and she had sat on the porch sewing until five o'clock, when she went to the neighbors to get the children. When she found that they were not there she became alarmed. When her husband came home she told him about the children and he at once set out to find and bring them home. After searching until dark, he returned to see if the children had come home yet, but when he got there he found that they were not at home. He again set out, this time taking the country road, for he had circled the town.

Meanwhile Fanny had come to the end of the lane, for it was not a road into while she had turned. At the end there was a cheery little house with a light showing out of the windows. She walked up to the door and knocked, because she knew that she was lost by this time. A busy little woman came to the door and was very much surprised to see a little girl there.

"Well! Well! Who are you and what do you want?"

"Please, ma'am, I am lost. Could I stay here till my papa comes and gets me?"

"Well! Well! Come in then and I will see what to do for you."

As Fred was walking down the road he saw a light. It moved toward him and he hastily hid in the bushes beside the road, because he thought it was a tramp. He stayed hid until the man had passed and then he walked on.

During this time Fanny had been making herself at home in the house at the end of the lane, playing with the little girl there while Mrs. Brown got the supper. After the dishes were cleared away Mrs. Brown asked Fanny where she lived. She said, "I live at Greendale." So Mr. Brown hitched the horses to the buggy and they all got in and set out for Greendale.

Just as they reached the crossroads they met a man with a lantern and he asked them if they had seen anything of a little girl and boy. They said that a girl had come to their house and she had said that her home was in Greendale and at that moment Fanny jumped up and said, "Papa, papa, papa!" Mr. Brown asked Mr. Smith to get in and ride. They went on for a half mile, when they overtook a boy walking along the road. It was Fred and he was taken into the buggy and soon went to sleep.

When they reached home Mr. Smith jumped out and thanked Mr. Brown for being so kind to him and his children. Then he carried the sleeping children into the house.

Mrs. Smith was so glad to see her girl and boy that she forgot to scold.

—Selma.

BEAUTIFUL EMBROIDERED SHIRTWAIST

Imported Direct from Switzerland

Unusually dainty is this lovely waist of fine quality of mercerized batiste. The design is something that you will not see copied anywhere else, and we are sure you would be delighted with it if you could see it in the whole piece.

2034—Ladies' dress, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 8 yards of 36-inch material for a 36-inch size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for March 4, 1917.

Jesus Feeds Five Thousand.

LESSON TEXT—John 6:1-14.

GOLDEN TEXT—Give us this day our daily bread.—Matt. 6:11.

This parable marks the high level of the year of our Lord's popularity. It is such an important miracle as to be the only one recorded in all four gospels. Be sure to use a good harmony. The returning twelve (Matt. 11:1) are taken by their master to a desert place that they might find rest (Mk. 6:31) and that he might comfort their hearts over the death of John the Baptist (Matt. 14: 1-12). The multitude would not grant them the right use of their leisure, but flocked to this retreat in the desert. They followed that they might listen to his gracious words, and perhaps behoid some new wonder (v. 2). Carlisle said he saw in England "forty millions, mostly fools." Jesus saw the multitude, and was moved, not with sarcasm, but with compassion which took a tangible form of service. Mark tells us (6:34) that Jesus was first of all teaching the multitude. It is better to teach a man how to help himself than to help the man. We should not be surprised at Phillip's slowness of faith. Moses in a like manner was one nonplussed as to how to feed the multitude in the wilderness. (Num. 11:21-23.). It is not so much how great the need nor how little we progress; rather, is th + little given over to God? Andrew, who had revealed Jesus unto Peter, discovers as though in desperation a boy whose mother had thoughtfully provided him with a lunch, consisting of five barley biscuits and two small herring (v. 9) at least that much remained. This is a great commentary upon the tide of interest at this time, that the boy should not have eaten his entire lunch, for the boy's hunger is proverbial. It seems as though Jesus emphasizes the helplessness of the disciples in order that he may show his power. His command "Give ye them" (Mk. 6:37) teaches us that we are to give such as we have, and not look to others nor to do our charity by proxy (Prov. 11:24-25). Again the Savior asks his disciples as though he would teach them the resources of his kingdom. Give what you have, and he will bless and increase it to the supplying of the needs of a multitude. The secret of success was when he took up the loaves, and, "looking up," God also saw that day and blessed it. We need to observe the systematic procedure. The people are seated or reclining upon the ground in ranks or in companies, the master blessing and breaking the boy's cakes, giving to the disciples. God works miracles through human agencies only. The result of this systematic procedure was that they were all satisfied, "filled" (v. 12). Luke adds that "all did eat" (Lk. 9:17). Not alone, however, was there divine order and lavishness, but there were economy and thrift as well, for Jesus gave careful direction as to the fragments. The lavishness is shown by the fact that the baskets into which the fragments were gathered were each probably large enough in which to sleep. This conservation process was a stinging rebuke to the improvident orientals and to present-day prodigals of that wonderful bounty with which God has blessed our land. God gives to us that we may use for others. Joy dies unless it is shared. Jesus is the living bread (John 6:48), and will satisfy hunger and life even as bread generates in the human body heat, vitality and power; so he would still feed the hungry soul of mankind.

Summary: (1) The hope of the world's salvation is in the wonderful power of God in multiplying the little we give to him in the way of service.

(2) If we bring no gift, how can God bless man? Compare this boy's service with the service of the little maid in Naaman's household.

(3) Conservation of the fragments, using well or wasting the fragments of time, of opportunity, etc, makes all the difference between success and failure.

(4) Let nothing be lost. The refuse of petroleum is today worth more than the oil product.

HICKORY Guaranteed Paint

KELLEY-HOW-THOMSON CO. DULUTH MINNESOTA

The Hickory Dealer Says:

Mr. Atkinson, of Superior, Wis., intended sending $10 away for paint for this house. Martin Erickson, the Hickory dealer, furnished Hickory paint and oil at regular price, total cost $8.75. Also saved Mr. Atkinson freight of about 75c. This house was painted 6 years ago and is in perfect shape today.

Hickory Costs Less Because It Spreads Farther

Two gallons of Hickory paint, with oil added, will go as far as four or five gallons of cheap paint to which no oil can be added. Hickory paint, with all its quality, costs less by the job. Prove it by getting a quotation on Hickory guaranteed paint for your house or barn.

See the Hickory Dealer in Your Town

or if there is no Hickory dealer, write us for FREE color cards and Paint Talk book, which gives you *money saving facts* on painting. Tells you why Hickory contains no acid or other impurities—why it spreads farther and holds the oil or "life" for years.

PART IV--One Squaw Man.

CHAPTER VII—Continued.

"Genesee!—nonsense!" said the Major brusquely. "We must look into that affair at once," and he glanced at the Captain; "but if that man's a horse thief, I've made a big mistake—and I won't believe it until I have proof."

As yet there had been no attempt at any investigation of affairs, only an informal welcoming group, and Fred, anxious to tell a story that she thought astonishing, recounted breathlessly the saving of the men by way of the mine, and of the gloves and the hands worn in that night's work, and last, of the digging up of that body and carrying it away to the mountains.

Her father, at first inclined to check her voluble recital that would come to him in a more official form, refrained, as the practical array of facts showing through her admiration summed themselves up in a mass that echoed his convictions.

"And that is the man suspected of stealing a few horses? Goodness mercy! what proof have you that will weigh against courage like that?"

"Major, he scarcely denied it," said the Captain, in extenuation of their suspicions. "He swore the Kootenais did not do it, and that's all he would say. He was absent all the afternoon and all the night of the thievery, and refused to give any account whatever of his absence, even when I tried to impress him with the seriousness of the situation. The man's reputation, added to his suspicious absence, left me but one thing to do—I put him under guard."

"That does look strange," agreed the Major, with a troubled face; "refused—"

He was interrupted by a sound from Rachel, who had not spoken after the conversation turned to Genesee. She came forward with a low cry, trembling and passionate, doubt and hope blending in her face.

"Did you say the night the horses were stolen?" she demanded. All looked at her wonderingly, and Kalitan instinctively slid a little nearer.

"Yes, it was in the night," answered the Captain, "about two o'clock; but you surely knew about it?"

"I? I knew nothing," she burst out furiously; "they lied to me—all of you. You told me it was in the morning. How dared you—how dared you do it?"

The Major laid a restraining hand on her arm; he could feel that she was trembling violently. She had kept so contemptuously cool through all those days of doubt, but she was cool no longer; her face was white, but it looked a white fury.

"What matter about the hour, Miss Rachel?" asked the commander; and she shook off his hand and stepped back beside Kalitan, as if putting herself where Genesee had put himself—with the Indians

"Because I could have told where Jack Genesee was that night, if they had not deceived me. He was with me."

Tillie gave a little cry of wonder and contrition. She saw it all now.

"But—but you said it was a Kootenai who brought you home," she protested feebly; "you told us Lamonti."

"He is a Kootenai by adoption, and he is called Lamonti," said the girl defiantly; "and the night those horses were run off, he was with me from an hour after sundown until four o'clock in the morning."

That bold statement had a damaging ring to it—unnecessarily so; and the group about her, and the officers and men back of them, looked at her curiously.

"Then, since you can tell this much in his favor, can you tell why he himself refused to answer so simple a question?" asked Major Dreyer kindly.

That staggered her for a moment, as she put her hand up in a helpless way over her eyes, thinking—thinking fast. She realized now what it meant, the silence that was for her sake—the silence that was not broken even to her. And a mighty remorse arose for her doubt—the doubt she had let him see; yet he had not spoken! She raised her eyes and met the curious glances of the men, and that decided her. They were the men who had from the first condemned him—been jealous of the commander's trust.

"Yes, I think I can tell you that, too," she said frankly. "The man is my friend. I was lost in the snow that night; he found me, and it took us all night to get home. He knows how these people think of him;" and her eyes spared none. "They have made him feel that he is an outcast among them. They have made him feel that a friendship or companionship with him is a discredit to any woman—oh, I know! They think so now, in spite of what he has done for them. He knows that. He is very generous, and wanted, I suppose, to spare me; and I—I was vile enough to doubt him," she burst out. "Even when I brought him his horse, I half believed the lies about him, and he knew it, and never said a word—not one word."

"When you brought him his horse?" asked the Major, looking at her keenly, though not unkindly.

Her remorse found a new vent in the bravado with which she looked at them all and laughed.

"Yes," she said defiantly, as if there was a certain comfort in braving their displeasure, and proving her rebellion to their laws; "yes, I brought him his horse—not by accident either! I brought him brandy and provisions; I brought him revolvers and ammunition. I helped him to escape, and I cut the bonds your guards had fastened him with. Now, what are you going to do about it?"

Tillie gasped with horror. She did not quite know whether they would shoot her as a traitor, or only imprison her; but she knew military law could be a very dreadful thing, and her fears were extravagant.

As for Miss Fred, her eyes were sparkling. With the quick deductions of her kind, she reasoned that, without the escape that night, the men would have died in that trap in the hills, and a certain delicious meeting and its consequences—of which she was waiting to tell the Major—would never have been hers. Her feelings were very frankly expressed, as she stepped across to the self-isolated rebel and kissed her.

"You're a darling—and a plucky girl," she said warmly; "and you never looked so pretty in your life."

The defiant face did not relax, even at that intelligence. Her eyes were on the commander, her judge. And he was looking with decided interest at her.

"Yours is a very grave offense, Miss Rachel," he said, with deliberation that struck added terrors to Tillie's heart. "The penalty of contriving the escape of prisoners is one I do not like to mention to you; but since the man in this case was innocent, and I take your evidence in proof—well, that might be some extenuation of the act."

"I didn't know he was innocent when I helped him," she broke in; "I thought the horses were stolen after he left me."

"That makes it more serious, certainly;" but his eyes were not at all serious. "And since you seem determined to allow nothing in extenuation of your own actions, I can only say that—that I value very highly the forty men whose lives were saved to us by that escape; and when I see Mr. Genesee. I will thank him in the warmest way at my command;" and he held out his hand to the very erect, very defiant rebel.

She could scarcely believe it when she heard the words of praise about her; when one man after another of that rescued crowd came forward to shake hands with her—and Hardy almost lifted her off her feet to kiss her. "By George! I'm proud of you, Rachel," he said impulsively. "You are plucky enough to—to be Genesee himself."

UPPER WISCONSIN

Barron Creamery Report.

We are pleased to give our readers some interesting facts from the annual report of the Barron Creamery Company, Barron, Wisconsin. The report has just been sent to us by W. A. Arndt, manager and treasurer.

In 1916 this creamery received 4,184,905 pounds of cream, which with an average test produced 1,154,491 pounds of butter. This creamery sold in 1916 1,398,820 pounds of butter. It paid an average price of 36.15 cents for butter fat at the farm and received an average of 31.25 cents per pound for butter. The percentage of overrun was 21.1. The cost of making 100 pounds of butter, including cost of hauling cream, was $2.09. The average number of patrons is 821 and the present number of stockholders 456. This co-operative company in 1916 received for butter $445,180.13. Of this amount $417,447.16 was paid to patrons for butter fat.

The Barron creamery was organized in 1902 and made 70,000 pounds of butter that year. This butter was sold for $14,953.55 and the patrons received $13,383.90. The company's business has increased every year. In fifteen years this company has made 10,500,000 pounds of butter and sold the same for $2,861,397.01. Of this sum the patrons received $2,623,147.55 for butter fat. The Barron creamery is the largest in Wisconsin and the record which it has made in fifteen years is an enviable one.

Colonization Company.

A new colonization company has been organized, to be known as the Wisconsin Colonizaiton Company, of Eau Claire. Among the incorporators are A. J. Keith, Ben F. Faast, and E. G. Keuhl. This company has purchased 50,000 acres of land in Sawyer county and plans to colonize and help develop the country. The company expects to build many miles of road at its own expense, and to furnish ready-made farms rather than cut-over timber land. It is expected to furnish an opportunity for many people of small means to get started in Upper Wisconsin.

Langlade County Jersey Breeders.

To the Editor:—Langlade county Jersey breeders held a small but enthusiastic meeting at the office of County Representative Swoboda on Thursday afternoon. It was purely a business meeting, the principal thing up for consideration being the election of officers.

Blaine Stewart was re-elected president; Ralph Lyons was elected vice president; P. Gillette, secretary; Chas. Schotte, treasurer, and J. T. Oppedal, director.

It was voted to hold a summer meeting at the home of Blaine Stewart on Friday, June 15th. It was further voted to make a list of the pure-bred registered sires owned in the county, same to be kept on file by the secretary.

Informal discussion centered about the importance of cow testing. So eloquent and enthusiastic did this become at times that the impression to the passers-by in the corridors of the court house must have been much like a runaway phonograph with a Cal Stewart record. From the excited mingling of phrases such expressions as the following stood out: "Farm without testing? Why, man, I don't see how a farmer can do it!" "I don't care how much a man thinks he knows about dairying, testing will convince him that he has a lot to learn." "The best judge on earth can't pick his highest producers unless he weighs and tests." "I didn't find my Jerseys on the road," I told a man that wanted to buy a calf from me for $5. He didn't get it, either. That calf as a heifer produced almost 400 pounds of butter in a year. How is a man going to spot the good ones unless he belongs to a testing association?" "I tell you this testing has convinced me of the importance of good feeding." "You're right, it's a good thing. I'm in it first, last and all the time."

The above and other statements equally forcible in support of testing were not made by one man. It was a regular "Kaffel Klatsch" of endorsement, everyone talking at once. Had the crowd been a bunch of Methodists not a one but what would have said "Amen" to the above.

It was the sentiment that the Langlade County Cow-Testing Association had done more to boost the interests of the breed in northern Wisconsin than any other one thing. Two years in succession a Jersey cow had headed the list. F. G. Swoboda.

County Agricultural Agent.

Marinette County Grain Show.

Recently the annual grain show of the Marinette County Experiment Association was held at the county agricultural school. Prof. R. A. Moore, of the University of Wisconsin, was present to judge the exhibit.

A good idea of what the new lands of Upper Wisconsin are able to show in grain farming can be gathered from a letter written by Professor Moore under date of January 14th to Professor Morton, of the Marinette county school, when Mr. Moore had returned to Madison after judging at the grain show at Marinette.

The letter follows:

I arrived safely home yesterday. I was very much pleased with your meeting. The decided change in the quality of your grains is something to be especially commended. I remember a few years ago when I judged at your school we had nothing but scrub grains from start to finish. You did not have a single exhibit this year but what was high enough in class to put into most any sort of a grain show. I am glad you are getting along so nicely with the good work, and it is certainly encouraging to see Marinette county develop as rapidly as it has.

Last winter Professor Delwiche, of the Wisconsin Experiment Association, spoke at the grain show at Marinette, and he stated at that time that he thought Marinette county would become the source of supply for pure-bred grains for the entire upper part of the state of Wisconsin. He said the soil, climate and geological conditions were exceptionally good for the raising of seed corn in Marinette county, and the progress which was being made indicated to him that there was a big future for the pedigree seed grain business in the upper eastern part of Wisconsin.

Howard I. Wood.

Marinette Co., Wisconsin.

With Wisconsin County Agents.

Ashland County.—The county agent is planning a vigorous campaign for tuberculin testing and is aiding farmers to secure high-yielding seed corn and other grain.

Barron County.—In assisting with the farmers' week at Prairie Farm the county representative gave a hog cholera demonstration and made blood tests for contagious abortion. A live stock shippers' association, the third in the county, has been formed at Barron. One association has shipped out twenty-six cars of live stock during the last four months.

Burnett County.—Ninety-eight animals have been tested for tuberculosis by the county agent and he reports no reactors. The surveying of a section of land for a drainage project, milk testing and conferences with farmers who are planning to build silos next summer are other services that the agricultural representative has rendered his neighbors.

Douglas County.—Valuable assistance has been given by the agent to the milk producers' association, in which more than 3,000 cows are now listed.

Eau Claire County.—The county representative has been of service to the farmers of his county in marketing their live stock.

Forest County.—At a recent farmers' meeting at Armstrong Creek the county representative took orders for thirty-one bushels of seed potatoes, and he is planning to distribute a peck to about thirty boys and girls in the spring, thus getting the younger generation to start with pure-bred stock. Plans are also being made for a co-operative creamery and cheese factory at Laona. Among other things, the representative has shown a road crew how to use a blasting machine for ditching, vaccinated three hogs for cholera, and worked on a poultry house contest which has recently been started by a woman's club.

Langlade County.—Co-operation is flourishing in this county. A very successful community institute was recently held in co-operation with the local school. Treatment for oat smut was discussed and a great deal of interest was manifested. Several boys have signed up to enter a beef-raising contest in the spring.

Lincoln County.—The county representative has spent a large portion of his time in teaching agriculture in the local teachers' training schools.

Oneida County.—"We are doing all we can to get agriculture established in every school in the county," says the agricultural representative. "I have arranged to visit several schools and help the teacher work out a definite agricultural teaching plan." He has also tested the milk of several herds of dairy cows, assisted in selecting seed corn and seed potatoes and grading potatoes for the boys' and girls' clubs.

Polk County.—There were thirty-one young men enrolled in the short course which was held at Luck. The county representative spent practically all of his time teaching them, and reports that the attendance was almost ideal. The boys have tested several herds of cows for tuberculosis and swine for hog cholera. A co-operative creamery has also been organized.

Portage County.—The short course in agriculture given by the county representative was well attended, some of the students coming from a distance of sixteen miles. The calf, corn and potato clubs, in this county are flourishing and the members of them taking a great interest in the plans of this season's work.

Price County.—The county representative recently placed eight new farm account books in one week. The representative reports that those who received books at the beginning of last year kept them in good shape. He has created quite an interest in weighing and testing the milk of individual cows. He has also assisted in the registration of pure-bred calves, selecting seed potatoes, making out herd records and inspecting several barns with a view to improvement.

Rusk County.—"The importation of five high-grade cows and three pure-bred Guernsey bulls was the important work of the month," says the representative. "The bulls were placed in communities where they will be of great value in grading up the native stock."

Sawyer County.—The range of the county representative's assistance to farmers has been very wide. He assisted at two farmers' institutes, planned balanced rations for dairy cows, doctored sick cows, and looked up seed grains and potatoes for farmers.

Taylor County.—Six silos have been purchased in this community as a result of a farmers' meeting held last fall. The county representative has assisted several farmers in the selection of pure-bred cows and helped a teacher select a Babcock tester. He reports that the farm account books collected from farmers were in better condition this year than ever before and all the farmers have again signed up for books for the coming year.

Vilas County.—A large amount of the county representative's time has been spent in holding farmers' meetings. These have been very successful throughout the county. He has also dehorned cattle of seven different herds, and worked on the secretary's report of the Vilas County Agricultural Society.

Walworth County.—The county representative has analyzed several samples of soil for acidity and is now making preliminary arrangements for a city beautifying campaign during the early spring. The home of the new La Grange Community Club, which has been recently organized by the county representative, is now being built. During the winter cattle buyers and sellers have been brought together by the representative, with the result that several carloads of cattle have been shipped out.

Would You Take Anything Forcefully Without Paying for It?

DO YOU believe in confiscation by legislation? Or are you among that vast majority of fair-minded men who believe that any one who is deprived of business or property by an act of the voters should be *compensated* for his loss?

There can be no middle ground on this proposition. If one class is entitled to compensation, all classes are. If you have the right to demand reparation or *compensation* for damage done to you, your neighbor has the same right.

If the city government condemned part of your property for widening a street, you would *demand* and would be granted fair and just *compensation.*

If you owned a herd of cattle that were diseased and therefore condemned and destroyed by State or Government authorities, you would be granted honest *compensation.*

If you are a working man employed by others, the Workingmen's Compensation Act assures you just and rightful *compensation.*

Can you, then, in fairness, honesty and justice, fail to concede to all others, without discrimination, the same rights of *compensation* that you enjoy?

Should not the industry that pays the heaviest percentage of taxes—an industry that has been fostered by the Government since the beginning—enjoy the same rights within the law that *you* enjoy?

The more you study *compensation* in all its phases the more you will concede that it is the only fair means of making good that which is injured by National, State or Municipal legislation.

VETERINARY

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Stud Not Sure.

Would like to know if there is anything to feed a stud horse to make him sure.

The first question is, why isn't he sure, and then advise treatment. The cause should be found and then remedied. Give plenty of exercise, good food, good grooming, and if he then fails some aphrodisiac may be given, but this should not be given until some good veterinarian is consulted.

Failure to Breed.

I have a cow that fails to get with calf. She has been served four different times. She is an extra good cow, young and in good condition. Can you tell me what to do for her?

As there are so many reasons for a cow not conceiving we could not say with any degree of certainty just what is causing this trouble without giving the animal a physical examination. This can best be done by your local veterinarian. The cause of the trouble will have to be found before the trouble can be corrected.

Lice on Calves.

I have thirteen spring calves that have lice. They eat well but are very thin in flesh. Is there anything I could do for them to get rid of the lice? If so, please let me know.

Cattle infested with lice should be dipped in the spring and again in the fall, using a coal-tar solution or tobacco dip. If only a few cattle are to be treated, the dip may be applied with a brush or cloth, or with a small spray pump, or a mixture of kerosene one-half pint and tar one pound may be smeared on the body. This treatment should not be restored to in winter. Good feed and good grooming are essential in these cases. A good louse powder sprinkled in the hair may be of some benefit.

Stomatitis.

I have a coming three-year-old heifer that was fresh in October and gave about three gallons of milk per day until a short time ago. Then she began to fail on her milk and to slobber like a horse on white clover. Her under jaw is swollen and her tongue is broken out with a rash. She has some kind of sore mouth. I have been swabbing it out with a wash of alum, borax and a few drops of carbolic acid. She has fallen off in flesh and has a very poor appetite. She has access to plenty of good water, oats straw, stalks, and I give her clover hay and silage and would give oats and bran, but she will not eat them. What is the matter with this cow and what will help her?

It is very probable your animal is troubled with inflammation of the mucous membrane of the mouth. This may or may not be of an infectious nature. We would prescribe treatment for you, but for fear this may be of an infectious nature we would advise you to have a veterinarian who is competent examine this cow and see if the cause of the malady can be ascertained.

Abortion

I bought six head of cows last winter from two different herds. One of each lot dropped a calf about the seventh month that was fully developed, but small in size. Later in the season a Jersey heifer dropped a calf about the sixth or seventh month. Do you suppose these cows are affected with contagious abortion? The Jersey comes in heat regularly and several of the cows I bought as well as those in my own herd have come in heat with more or less regularity every six weeks or so. Some say that vaccination is a good preventive. I understand this must be done four times. Now what I want to know is when to start. All the cows in my herd seem to be in calf but two head. I should like to know if cows should be vaccinated soon after being bred, before breeding, or when. Would also like to know what treatment, if any, I could give the bull so I may use him another year.

Most generally cows are treated by use of bacterin during pregnancy, but may be treated at other times. The method and time of administration should depend upon the bacterin used. This information may be obtained from the one you have to administer the bacterin.

Water For Cattle in Cold Weather.

I would like to know how long cattle can exist without water when the mercury ranges from 1 to 15 degrees below zero.

No authentic data can be found on this subject, because no such experiment has ever been tried. Cattle should have access to water not less than three times a day, and so much the better if they can run to it at will.

Consult a Veterinarian.

Will you kindly advise me through the paper what I can do for my cows? I have a herd of eleven cows and five of them have aborted. The first cow had three weeks before she should freshen and her calf is alive and in good health. Would you advise me to raise this calf? The second cow had another month's time, the third and fourth cows about six weeks, and the fifth cow was to freshen in May. There are several more that act the same or seem to look the same.

It is possible there is contagious abortion in your herd. We would advise you to have some competent veterinarian look the situation over, and if he advises treatment he may start you out on the right kind of treatment and you may be able to continue. In the meantime, remove the non-infected ones from the infected ones, clean and disinfect the premises thoroughly, and be sure to burn any and all aborted matter. We would raise those calves which seem strong and all right.

Great Percheron Dispersion.

EVERY farmer and breeder of Percheron horses should make his plans to attend the sale of Percheron horses at the state fair grounds, Milwaukee, on Wednesday, March 21st. This sale will comprise one of the best offerings of Percherons ever made in Wisconsin as two of Wisconsin's best studs will be dispersed, viz., those of Louis Lewellin & Sons, Waterloo, Wis., and Louis P. Sutter, Delavan, Wis. The latter stud consists of some 20 head of imported stallions and mares, which were personally selected in the famous Percheron horse breeding districts of France and were imported by Mr. Sutter in 1914 just before the outbreak of the European war. This was probably one of the last importations made from France. The stallions are the big ton type with tremendous bone and substance. They are coming four and five years of age, and offer a rare opportunity to our readers to buy a young imported stallion. Mares are a nice lot of drafty animals, only two being over five years of age and the balance being under four. We urge our readers not to miss this sale, as it is one of the few opportunities to obtain Percheron stock as there is very little of it now in the United States or is there likely to be in the near future. The stud of Lewellin & Son is well known to the readers of The Wisconsin Farmer through the winnings which this stud has made at the Wisconsin state fairs and other leading fairs in the state. In 1915 and 1916 they won champion on stallions and mares in Wisconsin bred and owned by exhibitor division. In 1915 they also won first and second on stallion foals, championship on mares in the open class and in 1916 won first on stallion and four mares bred by exhibitor; first on best three mares owned by exhibitor, first and second on get of sire, as well as many other prizes. All of these prize-winning stallions and mares will be included in this offering. Catalogs showing breeding, etc., are now ready and may be obtained from James G. Boyd, 426 Sycamore St., Milwaukee, Wis. When writing for catalog kindly mention that you saw their advertisement in The Wisconsin Farmer.—Adv.

New Seed Book and Garden Guide.

SEED planting time is near, and right now dependable information about the selection and handling of garden and field seeds is worth money. It means greater success and more profits later. Therefore, the announcement on page 22 by Galloway Bros. & Co., of their new 1917 Seed Book and Garden Guide is timely and of general interest. This elaborate 96-page book, illustrated in colors, is more than a catalog; it is a reference book for all plant growers. It describes practically all useful plants, their culture and requirements and the planting of the seed. Flowers, trees, shrubs, foliage and berry bushes and farm crops are included in it. The book is really a hand book of information for the farmer, gardener, orchardist, berry grower and landscape man. If you are interested in any of these lines, you should have this book for careful reference. Copies are just off the press. Get yours at once by sending to Galloway Bros. & Company, Waterloo, Iowa, and mentioning this paper when doing so.—Adv.

Lefebure's Belgians.

IN a recent communication from H. Lefebure & Sons, Fairfax, Iowa, they have the following to say: "Our sales for the first part of February have been good and among them were a large roan stallion to F. H. Cornelius, Bagley, Iowa; a stylish roan two year old to M. G. Lovitt, Stronghurst, Ill.; a six year-old stallion to Wesley Novotney, North Liberty, Iowa, and a six-year-old chestnut stallion to Richard Edwards, Whiting, Iowa. Although we have had numerous sales so far this season, yet we are still crowded for room, having no empty stalls in our ten large barns. Every stallion in our barns from three to six years old weighs over a ton and our two year olds weigh from 1,700 to 2,000 pounds. We have them in any color. We offer matched spans of mares in any color and from yearlings to aged mares, several of which weigh a ton. See page 31 and write for illustrated catalog, mentioning The Wisconsin Farmer.—Adv.

P. W. Young's Fall Boars.

WHILE attending the Willsie Duroc sale we stopped in to see that good Poland herd owned by P. W. Young, Prosper, Minn. He has about a dozen fall boars that are herd-boar prospects and these are being priced for quick sale at a very reasonable figure. Here is a good chance to get in on the ground floor. Buy a boar now and grow him out to suit yourself. They are sired by his 1,000-pound Orange Wonder out of a dam by Master's Giant, in our estimation the best sow sire in Minnesota. This cross has made good and the fall boars Mr. Young has for sale are equal to any we have seen. These will not last long, so send in your order early. Please mention The Wisconsin Farmer.—Adv.

Percheron and Belgian Stallions.

IF ANY reader of this paper is looking for a good Percheron or Belgian stallion or mare, they should call and see Hart Bros., Osceola, Iowa. These boys have a splendid lot of horses on hand, and they can fill your order to your satisfaction. It will pay you to see their horses. When writing them kindly mention this paper. See page 31. —Adv.

Galloway's Free Book.

A VALUABLE book for the household is announced on page 12 of this issue by the William Galloway Company, Waterloo, Iowa. It is the new 1917 General Catalog and Buyers' Guide which this company has just received from the printer. Every home should have a copy of this book which is crammed full of information on the big Galloway line of farm implements and supplies, automobile accessories, household goods, etc. Thirty pages, with complete descriptions and illustrations, are devoted to farm engines alone, 20 pages to the famous Galloway cream separators, 15 pages to Galloway manure spreaders and in addition there are big sections on furniture, clothing, shoes, drugs, toilet preparations and scores of other articles. Some space is given to the methods and policy of the Galloway Co. This book contains 270 pages, beautifully illustrated with four color pictures. To readers of this paper it will be sent free on request to the company whose address is given above. Write for a copy at once. —Adv.

Wyatt Jerseys.

WITH this issue of The Wisconsin Farmer, E. E. Wyatt, Tomah, Wis., changes his advertisement from Duroc Jersey swine to Jersey cattle. The percentage of his calf crop the past year has been heifers and for that reason he will have a few cows and heifers to sell. They come from register of merit backing and his milking herd are producers. Mr. Wyatt writes, that even though feed is high, according to the testing association his cows are giving him $2 for every $1 worth of feed consumed. Harbinger Chief has recently been purchased for service in this herd. He is sired by the well-known Dixon's Harbinger out of a dam with a 656-pound fat record. This bull will be bred to daughters of Maiden's Varsity King. Mr. Wyatt can supply you with one cow or heifer or with a carload. Most of the heifers offered are of his own breeding. Write him for further information.—Adv.

Salter Red Polls.

IF YOU want Red Polled cattle, write J. W. Salter & Sons, Unity, Wis. Just at this time they offer eight bull calves from three to six months of age. For those that do not need a bull for heavy service at once, these light weights should appeal, for the express rate would be low and you can grow out the bull to your liking. If you want a few open or bred heifers the Salters have a limited number that they will sell. We gladly recommend this firm. Look up their advertisement on page 29 of this issue.—Adv.

Buy Seed Corn Now.

YOU will soon begin to buy your seed corn and a great deal of care should be taken in making the proper selection. Buy the corn most suitable to your location and conditions. If you want Golden Glow, Wisconsin No. 7, Riley Martiny & Son, Baraboo, Wis., have a limited number of bushels for sale. It is guaranteed in every respect and we gladly recommend this firm. Notice their advertisement on page 6.—Adv.

Raise High Priced Wheat on Fertile Canadian Soil

Canada extends to you a hearty invitation to settle on her **FREE Homestead lands of 160 acres each** or secure some of the low priced lands in **Manitoba, Saskatchewan and Alberta.** This year **wheat is higher** but **Canadian land just as cheap,** so the opportunity is more attractive than ever. Canada wants you to help **feed the world** by tilling some of her fertile soil **—land similar to that** which during many years **has averaged 20 to 45 bushels of wheat to the acre.** Think of the **money you can make** with wheat around **$2 a bushel** and land so easy to get. Wonderful yields also of **Oats, Barley and Flax. Mixed farming** in Western Canada is **as profitable an industry as grain growing.**

The Government this year is asking farmers to put increased acreage into grain. Military service is not compulsory in Canada but there is a great demand for farm labor to replace the many young men who have volunteered for service. The climate is healthful and agreeable, railway facilities excellent, good schools and churches convenient. Write for literature as to reduced railway rates to Supt. of Immigration, Ottawa, Can., or to

NEWS OF THE SALE RING

Wisconsin Short-horn Breeders' Sale

The sale of Short-horns held at Madison under the auspices of the Wisconsin Short-horn Breeders' Association, was a decided success in every way. There was nothing sensational, but the feature of the sale was the noticeable interest manifested by the farmers and breeders of Wisconsin in the Short-horn cow. Over 500 people were present during the sale and anyone that saw this gathering could not help but be impressed with the fact that beef cattle, and especially the Short-horns, are "coming back" in Wisconsin. This was the first time that a show was held previous to the actual selling of the cattle and this was a decided advantage and stimulated a great deal of interest and discussion. G. D. Arnold had the first-prize aged bull and Carpenter & Carpenter won first on bull calf which was later made champion bull and sold for $500. G. D. Arnold also had first-prize aged cow and Chas. Pengilly first on heifer calf and champion female of the show. Seventy-five breeders attended the banquet which took place the evening preceding the sale and same was enjoyed by everyone present. The sale was well managed and its success is due to the excellent work done by the association's secretary, Prof. J. L. Tormey. Carey M. Jones did the selling. We follow with a complete list of animals sold.

The Janesville Duroc Sale.

Everything considered the sale of Duroc Jerseys made by John L. Fisher, February 8th, was the best of the season so far. This was the first sale of this breed ever held at Janesville, and the outcome of the sale was questionable, however, breeders and farmers were present to bid on the gilts bred to the Wisconsin champion, King Defender, and the son of the Omaha champion, Orion Cherry King Jr. Many of the gilts were of late farrow and did not have the necessary growth, but the buyers wanted hogs and they clamored over each other to get to bid on them. The top of the sale was a choice three-year-old sow, consigned by Fisher. She is an excellent brood sow and being bred to the grand champion boar, she was a good buy for F. H. Arnold at $155. Gant's Farm bought the good brood sow, A.'s Model at $145. She has proven her worth as a brood sow on the Fisher farm. The top of the gilts was an extra, driven in after the cataloged stuff had been sold. She brought $112.50 and went to the Edgewater Stock Farm. The top gilts came from the Parker farm. We feel confident that 30 more gilts would have been sold at this sale. Lloyd Seely sold the offering in a creditable manner. We follow with a complete list of the sale.

CONSIGNED BY E. H. PARKER & SON.

No. 1, C. J. Damerow, Beloit, Wis., $102.50; 2, Gant's Farm, Delavan, Wis., $100; 3, Ceylon Court Farm, Lake Geneva, Wis., $102.50; 4, Clarence George, Evansville, Wis., $92.50; 5, Dennis Shea, Melvina, Wis., $95; 6, Wallace Ransom, Avalon, Wis., $67.50; 7, G. B. VanNorman, Mukwanago, Wis., $85; 8, Ed Glawe, Winnebago, Ill., $100; 9, Dennis Shea, Melvina, Wis., $82.50; 10, G. B. VanNorman, $80; 11, W. B. Merriam, Delavan, Wis., $80; 12, W. C. Scofield, Edgerton, Wis., $72.50; 13, Jas. Oxtoby, Spring Grove, Ill., $70; 14, Wm. Thomas, Ridgeway, Wis., $90; 15, R. C. Church, Elkhorn, Wis., $70. Twenty head sold for $1,810 average $90.50. Five extras figured in this average.

CONSIGNED BY JOHN L. FISHER.

No. 16, Gant's Farm, Delavan, W ., $145; 18, A. A. Butterbrodt, Burnett, Wis., $57.50; 19, F. H. Arnold, Janesville, Wis., $155; 21, J. C. Bolger, Waterloo, Wis., $65; 22, W. T. Walker, Cherryvale, Kan., $50; 23, W. T. Walker, $50; 24, B. W. Little, Janesville, Wis., $95; 25, W. T. Walker, $60; 26, H. A. Haried, Edgerton, Wis., $57.50; 27, R. S. Brodt, Rockton, Wis., $57.50; 28, E. E. Carpenter, Brodhead, Wis., $55; 29, Aug. Johnson, Cleveland, Wis., $62.50; 30, W. B. Merriam, Delavan, Wis., $65; 31, Aug. Johnson, $52.50; 32, Webb Bros., Poynette, Wis., $55; 33, W. F. Wick, Watertown, Wis., $60; 34, H. Arndt, Koshkonong, is., $57.50; 35, W. W. Goodrich, Ft. Atkinson, Wis., $52.50; 36, B. W. Little, $55. Nineteen head sold for $1,307.50; average $68.81.

CONSIGNED BY F. H. ARNOLD.

No. 37, Frank Willnitz, Janesville, Wis., $65; 38, W. F. Wick, $62.50; 39, E. Shepardson, Beloit, Wis., $62.50. Three head sold for $190; average $63.

Smiley's Poland China Sale.

William Smiley & Son Poland China sow sale was held at Albany, February 22d. The day was ideal and there was a large attendance of breeders and farmers. The offering was not overdone, but they sold a lot of sows and gilts that will do well for their purchasers. The top of the sale was No. 10, a fall yearling of big-type breeding and went to Frank Rouden at $110. A pair of Goldengate King gilts sold for $97.50 apiece to E. W. Scott, Belleville, Wis. They were a good buy at this figure. The fact that an average of $69.65 was made is evidence that the breeders and farmers appreciate the Smiley Polands. We list those selling for $55 and over: No. 3, E. W. Scott, Belleville, Wis., $97.50; 4, E. W. Scott, $97.50; 5, M. Marty, Monticello, Wis., $57.50; 7, W. Becker, Durand, Ill., $82.50; 8, C. Horn, New Auburn, Wis., $82.50; 10, Frank Rouden, Fielden, Ill., $110; 11, G. P. Prapp, Monticello, Wis., $60; 12, M. Marty, $77.50; 13, James Derivan, Fox Lake, Wis., $75; 14, George Madden, Fox Lake, Wis., $67.50; 15, L. Reese, Brooklyn, Wis., $77.50; 17, D. H. Whitmore Evansville, Wis., $65; 20, James Derivan, $77.50; 21, Charles Ludtke, Lyons, Wis., $77.50; 22, Paul Paulson, Lynxville, Wis., $65; 23, O. A. Scott, Belleville, $67.50; 26, Ben Osvenn, Broadhead, Wis., $60; 29, Chas. Popanz, Albany, Wis., $57.50; 31, J. H. McBride & Son, Milton, Wis., $57.50; 34, E. W. Scott, $57.50; 38, M. Marty, $62.50; 39, E. E. Jones, Rockland, Wis., $67.50; 41, E. W. Scott, $60; 44, Charles O'Neil, Bridgeport, Wis., $55; 45, Charles Popanz, $60; 43, O. A. Scott, $60; 48, Charles Popanz, $55.

The Gant Duroc Jersey Sale.

A very successful Duroc sale was held at the John D. Gant farm, Delavan, Wis., February 15th. Mr. Gant is the busy secretary of the Wisconsin Duroc Jersey Breeders' Association and he is doing his best to improve the quality of breeding stock on Wisconsin farms. It will be noticed that the stock sold not only brought a fair price, but was well distributed, and this indicates a lively interest among breeders of this state in Duroc Jersey hogs. It was a bona fide sale in every way with no bidding in. The following is the sale record showing the purchaser and price of each animal offered:

No. 1, Ceylon Court Farm, Lake Geneva, Wis., $285; 2, Roy Church, Elkhorn, Wis., $125; 5, J. L. Fisher, Janesville, Wis., $77.50; 6, Ceylon Court Farm, $77.50; 15, M. H. O'Keefe, Waunakee, Wis., $75; 9, Thos. James, Delavan, Wis., $67.50; 11, Fred Vaughn, Lyons, Wis., $67.50; 4, H. E. Braatz, Brandon, Wis., $65; 14, R. H. Sturtevant, Delavan, Wis., $62.50; 25, H. Isham, Springfield, Wis., $62.50; 23, Phillips Bros., Delavan, Wis., $62.50; 27, McCanna Stock Farm, Burlington, Wis., $60; 3, R. C. Church, Elkhorn, Wis., $60; 24, J. L. Fisher, $60; 23, A. A. Lisher, Durand, Ill., $60; 20, M. V. Holloway, Millard, Wis., $60; 31, Mike Duggan, Delavan, Wis., $60; 32, F. R. Constance, Waupaca, Wis., $60; 28, J. J. McCann, Janesville, Wis., $57.50; 26, W. C. Dillon, Round Lake, Ill., $57.50; 21, J. L. Fisher, $57.50; 16, F. R. Constance, Waupaca, Wis., $57.50; 30, Wm. Baumbach, Elkhorn, Wis., $57.50; 17, E. M. Cavanaugh, Delavan, Wis., $57.50; 22, J. J. Hamshire, Marshal, Wis., $55; 29, M. Duggan, Delavan, Wis., $52.50; 7, Wm. Vorpahl, Delavan, Wis., $52.50; 36, Jas. Oxtoby, Spring Grove, Ill., $52.50; 10, Upland Farm, Walworth, Wis., $52.50; 12, Jas. Oxtoby, Spring Grove, Ill., $47.50; 19, F. Finley & Sons, Elkhorn, Wis., $47.50; 3, Tilden Farms, Delavan, Wis., $42.50; 37, E. E. Ayer, Walworth, Wis., $37.50; 34, E. J. Giess, Prairie View, Ill., $40; 18, E. J. Giess, $37.50; 13, J. F. Stahl, Deerfield, Ill., $37.50; 39, F. R. Constance, $25; 33, Fred Vaughn, $35; 35, W. H. Aldritch, Burlington, Wis., $40. Summary: 39 head including fall pigs sold for $2,502; average $64.50.

Willsie's Duroc Jersey Sale.

Geo. H. Willsie has been unfortunate this year in trying to sell his bred Duroc Jersey sows. He was to have sold February 2d, but on that date the trains were tied up and it was necessary to postpone the sale. He then decided to sell February 21st, and the morning of the sale a blizzard started and interfered with the sale again. A handful of breeders and farmers weathered the storm and gave Mr. Willsie what support they could with a result that 37 gilts were sold at an average of $54. A good offering was sold—well grown and in nice condition and those that made selections in this sale will have done a good day's work. E. Burmeister, Harmony, Wis., secured the bargain of the sale when he bought a tried sow sired by Chief Defender for $100. John Kramer, of Lanesboro, bought a good daughter of Big Col. at $75 and Bunte Bros., Cuba City, Wis., bought a litter sister at $72.50. Everything taken into consideration it was a good sale, although the hogs sold would have justified a $25 a head higher average. We list those selling for $45 and over:

No. 1, E. Burmeister, Harmony, Minn., $100; 1½, Roy Miller, Prosper, Minn., $77.50; 2, N. Richert, Prosper, Minn., $70; 3, O. Brenseth, Prosper, Minn., $45; 4, Celley, Bros., DeSoto, Wis., $50; 6, John Kramer, Lanesboro, Minn., $55; 7, O. R. Farrar, Albert Lea Minn., $55; 8, R. Custer, Prosper, Minn., $45; 9, Ed Patterson, Jr., Bloomington, Wis., $70; 11, R. Custer, $46; 13, T. F. Deibold, Preston, Minn., $47.50; 15, O. R. Farrar, $52.50; 16, Brenseth, $45; 17, G. Milne, Canton, Minn., $65; 18, H. Pooler, Prosper, Minn., $45; 19, M. Branderck, Prosper, Minn., $45; 21, T. F. Deibold, $50; 23, O. R. Farrar, $57.50; 25, M. O. Kjos, Peterson, Minn., $45; 26, Roy Miller, $45; 27, M. O. Kjos, $60; 28, E. Burmeister, $52.50; 30, Ed Patterson, Jr., $67.50; 31, Bunte Bros., Cuba City, Wis., $72.50; 33, John Kramer, $75; 34, Roy Miller, $70; 35, Roy Horsfall, Bloomington, Wis., $55. Summary: 37 head sold for $1,986.50; average $54.

ALFALFA CORN

My three machines save price of an **AUTO** each 5 years. I am the inventor and maker. My **"SURE-STAND"** Alfalfa and Clover Press Drill seeds in **CORNFIELD** at last cultivation. **ONLY FIVE POUNDS** to the acre needed. **SAVES ONE-HALF SEED** and all the (Corn) Nurse Crop. My **"KLEEN KORN" BLIND PLOWING ATTACHMENT** for Corn Planters, blind plow the corn as fast as planted. No more weeds or baked soil—Absolutely clean corn hills. My **"BEST YET"** Light Self-cleaning **"REVOLVING TOOTH"** Corn Harrow is the **LAST WORD** in corn tools. I have farmed 50 years. I needed these tools, but they were not made. Postal brings Catalogue, necessary pre-seeding instructions and "Alfalfa and Corn Hints," worth many dollars.

Factory to Farmer

Beautiful Picture for You

Solve This Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, a beautiful panel picture, "The Popular Girl," printed in many colors. This is a wonderful picture. All you have to do is enclose four cents stamps in your letter to pay postage and cost of mailing. We will also send a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland pony.

Fine Pony Given Away

Remember the Pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in the great contest. In case of a tie a pony will be sent to each person so tied. Write me today.

THE PONY MAN Dept. 608 Des Moines, Iowa

Overhauling the Automobile.

Any Person With a Little Mechanical Ability Can Do the Work and Save Garage Charges---By Henry Hatch.

IF THE roads will permit it at all the car of today is used all through the winter and is not carefully housed up at the first coming of cold, as was the car of seven or eight years ago. The present car is mechanically more perfect that the earlier models, getting more power out of a lower grade of gas, even in extremely cold weather, than was possible a few years ago, so cold weather no longer stops traveling by car if the conditions of the roads will permit it. A richer mixture of gas is required in cold weather, however, and this has a tendency to carbonize the engine and after a winter of use the car is more in need of an overhauling than it usually is after a long summer of use.

The farmer of natural mechanical ability can do this work as well himself as it can be done in an expensive garage, only, of course, he cannot do it as quickly. The first warm days of spring, when work cannot be carried on in the fields, is a good time to get about this work. Unless new bearings or extensive repairs are required it is about a two-day job to grind the valves of the engine, scrape out the carbon and otherwise put the car in good running trim. Many garages are now equipped to burn out the carbon with acetylene-oxygen burners, but this work should be done by a very experienced man or too much heat may be used and the cylinder walls warped. Some car owners object to having this done, even by the most experienced, while others say it is a better way of getting rid of the carbon than any other, as it burns it out closer than it can possibly be scraped out, and it is not necessary to take the engine down to do it. Taking the engine down, however, is no great job and it can be done and put back together again without trouble by any farmer of natural mechanical ability. With the engine apart it is an easy matter to scrape out the carbon and the valves of most makes of cars can be reached handier for grinding after the engine is down, although when only the valves need grinding we never take the engine down just for that purpose alone. If the carbon is not particularly bad the most of it can also be scraped out by the use of a set of curved scrapers without taking the engine down. These scrapers can be bought for less than $1 for a set of three and are so shaped that by use of all almost every part of the combustion chamber and cylinder head can be reached.

After cleaning out the carbon and grinding the valves the next move is to drain out all oil from the crankcase and all grease from the transmission and differential gear cases. Fill the crankcase with about two-thirds as much coal oil as it takes lubricating oil to fill it and run the motor about a moment with this in at a moderate speed; drain this out and refill with fresh lubricating oil. The old oil can be allowed to settle and a larger part of it will do for farm machinery oil, but do not use it again in the motor. The coal oil used can be saved and comes to a good use about the poultry house as a disinfectant and a killer of mites and other insects.

After all grease that will drain from the gear cases is out replace the drain plugs and fill with coal oil and run the car a distance of twenty to thirty rods with the coal oil in. The motion of the gears uses the oil as a wash and tends to liquify all old grease so it drains out with the oil, as well as moving from all recesses all particles of metal that may have worn from the bearings. This coal oil may also be saved and used for the same purposes as that used in the crankcase, while the old grease comes in handy with which to paint moldboards and shovels to prevent rusting. Refill all gear cases with new grease or with a heavy grade of gear oil if the cases are tight enough to hold it.

With this overhauling any with a trial run to test for leaks about the engine, should any develop because of not getting gaskets about the valve caps or exhaust or intake manifolds seated tight, the car should then be in shape for a summer run, with a minimum of trouble and a maximum of power for the gas used. Use nothing but a good grade of lubricating oil at all times, a grade suited to your motor and one that you find by experience leaves the least deposit of carbon. Good oil is a great help in producing power.

A VERY SATISFACTORY SILO ON THE FRANK KRAUSE FARM, BROOHEAD, WISCONSIN.

The Wisconsin Banker-Farmer Conference will be held at Madison March 13th and 14th. The annual horse show will be held Tuesday evening, March 13th. The program this year is filled with numbers which will be of interest to farmers of the state and thousands should be sufficiently interested to attend. Special trains will be run from a number of points. The Wisconsin Farmer urges those of its readers who can do so to attend this conference and share in its benefits.

NEXT WEEK'S SALE PROGRAM

A COMBINATION OF SIZE, IDEAL TYPE AND PERSISTENT PRODUCTION

A 31.02-POUND bull, that comes from a long line of cows of large size, ideal type, heavy-production ability, which are persistent. **Racine Johanna Piebe Mercedes 188460.** Born December 8, 1915. His dam, **Ella Mercedes of Elm Court, made 31.02 pounds of butter in seven days;** 130.47 pounds butter in 28 days (an average of 32.69 pounds butter per week for four weeks); 829.78 pounds butter in a year. She weighs over 1,600 pounds. **His sire's dam** made 27.70 pounds butter in seven days; **808.82** pounds butter in a year and weighs close to 1,600 pounds. His dam's dam, sisters and his parents' sisters are big cows of good type and heavy producers. Come to our farm and see them—and see the kind of cows his daughters will develop into. Am also offering a straight and well-grown yearling heifer out of Lady Johanna of Elm Court and sired by Count of the Pontiacs.

HOLSTEIN-FRIESIAN CATTLE.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - WAUKESHA, WISCONSIN

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE have never offered to our trade a more superior lot of Percheron and Belgian stallions, in both imported and American bred stock, than we can now show. Our imported horses are young and thoroughly acclimated, many of them having made seasons in 1915 and 1916 and are tried and tested sires. Our American bred horses were selected from the best breeders in America and are out of noted sires and dams and are horses of great quality in every respect. We have especially selected ten black and dark gray 2 and 3 year old Percheron stallions weighing 10 tons. These are all outstanding horses and should be purchased by those who need a sire for full-blooded mares. Among them is Coco, 1st prize 2 year old and reserve champion at the Wis. State Fair. This colt is black in color and weighs a ton. To the early buyer we offer one of the greatest collections of ton stallions to be seen in any importing barn this winter. We have no old, worn out, picked over stallions on hand. Let us know your wants, or better still, come and spend a day or two. A hearty welcome awaits you. Send 25 cents in stamps for large horse hanger, which shows the picture of a number of stallions now on hand, our main farm and sales stable and our firm's picture. Will sell several of our choice Iowa farms on easy terms.

FRANK P. SHEKLETON & SONS LAWLER, CHICKASAW CO., IOWA

We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R. R., making direct connections for Lawler.

"HOG-TONE Made My Sick Sow Gain 40 Pounds!"

That's What Wm. T. Peterson Declares! He Accepted My Free 60 Days' Treatment Offer! Why Don't YOU Take Advantage of It? Today!

THIS successful hog raiser, Mr. Wm T. Peterson, of Kibbie, Mich., writes: "Enclosed find $2.00 in payment for two bottles of **Hog-Tone**. It did my brood sow a lot of good. She was as thin as a rail and would not eat. I fed her **Hog-Tone** three times and she was eating all I gave her. She gained 40 pounds in the last 60 days. All the pigs are doing well also."

Hundreds of the subscribers of this splendid farm paper have grasped this offer.

J. H. Miller, Spencer, Ohio, writes: "Avalon Farms **Hog-Tone** has done my hogs much good. One gilt was very stiff and lame from some cause. I concluded it was from worms and ordered **Hog-Tone.** She is very much better and improving all the time. I gave the **Hog-Tone** to 8 shoats and they have made *wonderful* growth considering that they have the cold weather to contend with."

Elmer Vornkahl, hog raiser of Farmington, Iowa, writes: "About 6 weeks ago I ordered **Hog-Tone** on trial. It has done *all* that you claim for it. I have been giving it to 9 small shoats, which when I weaned them, were not looking a bit good. They look nice now and have ferocious appetites."

S. Hollinger, Brunswick, Neb., hog raiser, writes: "About a month ago I received two bottles of your Avalon Farms **Hog-Tone** on trial. I commenced treating our brood sows, 11 in number and the result has been *very* good. After treating them with **Hog-Tone** for a while, we made a *two-weeks' test* between the 11 sows and about the same number of fat hogs of same breed. The fat hogs got about *twice* the amount of corn that the sows were getting and the fat hogs made an average gain of 15 lbs. in 12 days, while the 11 sows made an average gain of 16 lbs. in 13 days. I am sending you an order today for three more bottles as we have another lot of hogs we are starting to treat."

We have stacks and stacks of just such letters here in our files. They come in to us every day from every section of the Corn Belt. And every one of them tells the fine results—the big profits that farmers reap as a result of grasping this Free 60 Days' Treatment Offer.

Try 60 Days' Treatment of AVALON FARMS HOG-TONE

The Liquid Worm Killer and Hog Conditioner For ALL Your Hogs—FREE—At My Risk!

Don't you want to fatten your hogs faster, cheaper, too? Then send the coupon. I will ship you one big $1.00 bottle containing a full quart, 32 ounces, of **Hog-Tone** for each eight hogs in your herd, the day the coupon below, filled in, reaches this office. Sufficient to treat *all* your hogs 60 days or more, according to size—to free your hogs of worms—to enable them to put on more weight from the same feed—to fill them with strength and vitality to resist disease attacks.

Avalon Farms Hog-Tone is a highly concentrated liquid medicine for hogs only. Contains important liquid medical ingredients, which cannot be combined in medicated salts, stock foods or condition powders of any kind. Easily mixed with any kind of slops, drinking water or dampened feed. **100 per cent strong. Hog-Tone** cleans out worms that infest hogs—malignant Thorn Head Worms—Stomach Worms—Liver Worms—Lung and Bronchial Worms. Gives protection to hogs from easily contracting Cholera, Rheumatism, Scours, Thumps caused by worms, and Indigestion, Enteritis and other diseases. A simply wonderful tonic and conditioner; gives hogs voracious appetites, aids digestion, helps them thrive, grow and put on fast increases of flesh. **Splendid for pregnant sows—assures sturdier, healthier litters.**

Don't Send Me A Cent! Simply Mail Me This FREE Coupon!

Simply tell us how many head of hogs you have—write down your name and address and mail to me. We will immediately ship you enough Avalon Farms Hog-Tone to treat your hogs for 60 days! You simply pay the transportation charges. Treat your hogs according to directions. If at the end of the treatment you are not completely satisfied—simply return the labels to us and you don't owe us a cent.

THE WISCONSIN FARMER

VOL. XLVI. NO. 10. THURSDAY, MARC WHOLE NO. 1832

Reading Room of the U of I Urbana Ill.

A Modern Badger Farm Home.

WHEN Henry Haberman, of Monroe, Wis., was just a boy going to school and helping on his father's farm in Jefferson township he was often quite disgusted with the endless amount of work he had to do around the house during his spare hours. There was water to carry and wood to bring in and ashes to take out. The stoves needed constant attention, and on the colder days the pumps were usually frozen tight. So he made up his mind that if he ever got to be the owner of a farm he would have for himself and his family such conveniences as are common in the city. That was a long while ago.

NEW HOME OF HENRY HABERMAN, NEAR MONROE, GREEN COUNTY, WIS.

Mr. Haberman is now the owner of a 200-acre farm in Green cou ty, and he has the conveniences he wished for while he was young. His idea in getting these labor and life savers was to show that the farm need not be without them as long as its owners can afford them. When Mr. Haberman bought the farm, some seventeen years ago, the old house was standing on the same spot the new one is now on. He planned from the first to remodel it and have a comfortable home. But he did not believe that he should do so before the farm had yielded him enough to warrant it. So he waited. About five years ago a new horse barn was needed, and it was built on the principle of doing things well, if at all. It took a great share of the profits of the first years. Before this time Mr. Haberman had bought Holsteins, notwithstanding the fact that neighbors for miles around had shaken their heads dubiously at such a purchase. Incidentally, it may be mentioned that Green county is now one of the greatest Holstein centers in the country. These cow purchases by Mr. Haberman cost him still more money.

THE OLD HOME ON THE HABERMAN FARM WAS GOOD, BUT IT WAS NOT GOOD ENOUGH FOR THIS PROSPEROUS FARMER.

Finally, in 1914, it was decided to erect a new home. While the old house was still in good condition it was not well suited for any practical scheme of remodeling. All that was saved of the old house was one of the wings, which was cut off and moved to one side and is now doing good service as a garage for the seven-passenger family car. That these folks have really made some success in farming may be believed when it is told that the family automobile is one of the most expensive types manufactured, costing nearly $4,000. The new house was completed in 1915, and we may well imagine the satisfaction and comfort which Mr. Haberman and family have had out of this model farm home. The new house embodies everything that Mr. Haberman, as a boy, hoped some day to have in his home. The house, like most all important things in our lives, is a result of an ambition which really started when Mr. Haberman, as a boy, was attending to the chores on his parents' farm. This boy, of course, was not afraid of work. In those days farm boys were used to hard work, but he was smart enough to see that a good many conveniences could be introduced which would make work less of a drudgery. The furnace at the Haberman home is of the modern type and requires attention only two or three times a day. The ashes do not have to be carried out often. There is no wood or coal to carry. Both these are stored in the cellar near the furnace. Water is available for washing and drinking purposes on every floor of the new Haberman home. Furthermore, it can be had hot or cold. The bathroom of this house is on the second floor and it certainly beats the old-time method of taking a "tub" in the kitchen. This house is supplied with two toilets—one upstairs and one down—and it is unnecessary to explain to people, who have always lived on the farm, what this convenience means. Every room in the house has electric lights. This not only adds to the brightness of the home surroundings, but eliminates the danger of fire. There are five children in the Haberman household, ranging from six to twelve years age. Even the youngest of these children may handle the lights without any danger, such as was always feared from the old-style kerosene lamps. When the parents go away to church, or to town to trade, they are not in constant fear that there may be a lamp explosion. The children are left in comparative safety in charge of the oldest girl. A four-horse-power engine charges the batteries for this lighting system and fills the pressure tank, which forces the water system through the pipes. There

KING SEGIS PIETER, HERD BULL ON HABERMAN FARM. HIS DAM WAS A TWENTY-SIX-POUND COW AT THREE YEARS OLD.

THE BIG PORCH COMES IN HANDY AT THRESHING TIME.

A NEW DAIRY BARN FINISHED LAST FALL AND NOT YET PAINTED.

is no dirt or any special inconvenience connected with the running of this engine. It is simply a case of a pull on the belt and "away she goes." On Monday morning, when the average farm housewife prepares for a day of washing, the entire work is completed in the Haberman household in about three hours. While the engine is turning the washing machine it is developing electricity, and at the same time filling the pressure tank. Four hours per week is all the work the engine needs to do to furnish the power and pressure.

The same consistent, clear mindedness and thoughtfulness which considered these conveniences worthy of this farm home were on the job arranging all parts of the house. Every room and closet was built to be an aid to the housewife. In the ground plan of the house the washroom was the most important point considered next to the kitchen. A door leads from the outside into the cellar stairway. At the head of this stairway is the washroom where the men may clean up before going into the dining room. The kitchen has two built-in cupboards which contain all the necessities of life conveniently arranged on shelves above and below the good-sized working tables. One of these cupboards is next to the stove and the other next to the sink. These two large cupboards make a pantry unnecessary. The spacious dining room has a built-in china closet which has room enough for several sets of chinaware and cut glass. Next to it is the sitting room, well lighted with four large windows. In the corner is a talking machine of the latest model, and by simply lifting the cover and turning the lever, the members of the Haberman family and their guests may have the best music of the day while they eat. From the dining room a door opens upon the hall. At the left of the hallway another door opens into the downstairs bedroom. The downstairs toilet is located underneath the stairway ascending to the second floor.

There is a central hall at the top of the stairs and five rooms and bath on the second floor. The attic furnishes two small, but very comfortable, rooms. At the end of the hall on the second floor a door opens upon a large sleeping porch.

The space underneath the porch has been used as a cold storage room. It has four stone walls and a cement ceiling and floor and is, therefore, cold enough in the winter time to allow freezing. Mrs. Haberman puts the freshly butchered meat into this room and allows the cold weather to do the rest until she is ready to use it. A warm spell does not thaw the meat out quickly in this storage room.

The laundry in the basement is roomy enough so that clothes may be dried inside. This house is supplied with a clothes chute from upstairs and this chute empties into a basket in the laundry. In one corner of the laundry is a stove on which the boiling is done. This stove is used also in the butchering season. Another room in the cellar is used for a store room. In it can be stored enough potatoes and canned goods to last through the winter and early spring season. A dumb waiter does service between the kitchen and the store room and eliminates the carrying of jars and foodstuffs up and down the stairs.

It is not strange that Mrs. Haberman sees no reason why people should want to live in the city. She has all the conveniences possible in any city home and she has the freedom of country life, which our city people are seldom able to enjoy.

The farm is stocked with sixty head

FIRST FLOOR PLAN

HABERMAN FARM HOME IN GREEN COUNTY, WIS.

of pure-bred Holsteins and the milk is hauled daily to the condensery at Monroe. A new dairy barn 20x38x118 was completed last year. The arrangement of everything in it is designed to save steps and utilize all the space.

SECOND FLOOR PLAN

PLENTY OF BED ROOMS, CLOSET AND A BIG SLEEPING PORCH.

There are stanchions for seventy head of cattle besides the calf pens and box stalls. Each cow has fresh water in individual drinking cups. Track service carries the litter away and feed to any place where it may be needed. An extension track leads to the milk house. The milk carrier holds three cans at one time and the cans may be cooled without taking them off the carrier.

The loft above the cow barn has room for an enormous tonnage of hay. Chutes which lead from the grain bins at each side of the barn help to lessen the labor in feeding. The first silo built many years ago will soon have a mate of equal height. Silage is regarded as essential on this farm where so many cows are milked. The day is past when the usefulness of the silo is questioned in the dairy country.

Light and ventilation were taken into consideration in the construction of the dairy barn. There are enough windows to permit the sun free access into every nook and corner, and three aerators on the roof take care of the foul air from the stables.

The horse barn, built some five years ago, is 20x42x48 feet, has room for sixteen horses and, in addition, accommodates 2,000 bushels of grain and about ninety tons of rough feed in the loft. A trough in the center of the drive permits the washing of the horses in the barn.

Mr. Haberman believes that in building anything the chief object should be to make use of every foot of the floor space. In every case practical things should be considered. The health of the animals must not be neglected and Mr. Haberman is convinced that sanitation of a building is important, as it greatly decreases the chances for disease. One must build in a practical way and then do his share by cleaning out the manure and dust. Mr. Haberman has been township treasurer for a number of years and is also a director in the local milk producers' association. He considers the building of his home and its modern features the biggest and best thing he has ever done. When the Housewives' Club mets at Mrs. Haberman's, there is plenty of room, plenty of warmth and plenty of light.

Cotton Seed Meal Supplies Protein at Half the Cost of Grain!

Grain is too valuable to feed. At present prices, protein in oats costs 24c per lb. In corn it costs 26c per lb. In middlings 13c, and in bran 15c. But cotton seed meal supplies digestible protein for 6c per lb.—less than half the cost of other feeds. The manure from stock fed cotton seed meal is worth $38.63 at present fertilizer prices. You get 80c worth of fertilizer with each dollar's worth of feed.

At average fertilizer prices the manure is worth $25 per ton as compared with $7 for manure from oats and $6 for manure from corn.

$1,172 More Profit From 40 Cows

Experiments at the Georgia School of Agriculture showed $1,172.80 more profit per year on butter from 40 cows by using cotton seed meal and silage instead of silage, hay and mixed concentrates. Dr A. M. Soule, President of the College, says: "The owner would almost double his profit by using cotton seed meal and silage as compared with using a minimized ration of silage with hay ad libitum and a generous ration of mixed concentrates."

Saves $88 Worth of Corn and Hay

"At average prices on each ton of cotton seed meal fed, the farmer saved $55.44 worth of corn and clover hay." At present prices each ton saves $88.64. FREE—Our book of formulas for feeding cotton seed meal sent free upon request. Write nearest office.

SEED CORN
Goddard's Silver King

Greatest—most productive—most profitable variety. Grown by the originator, Mr. Goddard, on his own farm in this county and personally selected by him. Finest quality—absolute purity guaranteed. Sworn statement protects you. Only a limited quantity of this seed for sale—shipped crated in the ear. Order now, before supply is exhausted. Big new 1917 Catalog, complete information, free. Write ADAMS SEED COMPANY, Box 50, DECORAH, IOWA.

FARM WITH DYNAMITE

and accomplish more work in removing stumps, rocks, also planting trees, digging ditches, etc., than twenty men. It's effective, safe and easily used; guaranteed Standard Brand; shipped DIRECT from Mill in this state, lowest prices. No salesmen. Established over 30 years. Write for full particulars. BRUNS POWDER CO. TERRE HAUTE, INDIANA.

Get All the Cream

YOU cannot expect to get all the profit from your cows unless you have a separator that skims clean. Why don't you make up your mind here and now to buy a **Primrose or Lily cream separator?** Then if your checks are not big enough, you will know that the trouble is with the cows, not with the separator

The president of the Iowa Federation of Cow Testing Associations says that of the machines in use in his association, and they are many, the **Primrose** skims closest. It leaves less than one-hundredth of one per cent of the cream in the milk. The **Lily** skims just as close. Neither one wastes any cream. With prices of everything as high as they are now, to waste cream is little short of a crime.

Yes, you can buy separators for less money. You can also pay more. But you cannot buy a closer skimming machine, one that runs easier, or one that will skim clean for a longer time. Do not delay. The longer you put off buying a **Primrose or Lily cream separator**, the more you lose. Get one of these machines, and your separator troubles will disappear as if by magic. Drop us a card for catalogues and full information.

BURNED LIME FOR SOILS

Use Burned Lime and Get Quick Returns

The net gain from use of lime once during the five year period was $13.00 per acre, according to Experiment Station, Wooster, Ohio. Two-thirds of the soils of Wisconsin are acid uplands as well as lowlands. (Report of Wisconsin Agricultural College.)

New York, Pennsylvania, Ohio, Virginia and Maryland use millions of barrels of burned **LUMP** lime for soils and get big returns.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

WISCONSIN AND POTATO GROWING.

SO MANY of my Wisconsin readers write me and mention their work in growing potatoes that I have come to be intensely interested in the tuber and the progress which our state is making in its culture. I was interested recently in an article which told of the introduction of potatoes into parts of Ireland, from North Carolina, not much more than 100 years ago. Of course, it had always occurred to me that the potato was grown in Ireland long before it was grown in America, and I doubt if many of my readers look upon the potato as an American product. It was not much more than a century ago that potatoes were not considered good food. Food was not in those days considered in the light of its value for certain vegetable and mineral properties. In the days when colonies were being planted on this continent, potatoes were regarded largely as a food for live stock, and people did not put them on the table when they could get what was considered more palatable food. I have read that Washington and his army at Valley Forge used a good many potatoes in their fare, but, as I now understand it, this was a sort of last resort, as one would go to roots and herbs for foods if forced to. The potato is a native of the tropics, having been discovered by Spaniards and not by Murphys, and carried from Chili and Peru to Spain in the early part of the sixteenth century. The original settlers at Jamestown and Plymouth did not bring over any potatoes, though potatoes were later imported to New England from Ireland. Historical sketches which I have been able to find regarding the potato seem to conflict, but I am led to believe that Spaniards first brought potatoes to this country and that they may have sent them to England and Ireland about the same time, and also to Germany. But it was quite a significant fact to me, in reading about the potato, to find that at one time there was quite a shipment of seed potatoes from North Carolina, by sailing vessel, to Ireland, though I could not say positively that this was the first time that "spuds" were shipped to the Emerald Isle. Probably it was not.

I need not tell my readers what a wonderful development the potato has had as a food product in the last century and a half. Potatoes are a great staple food for both rich and poor. It was said of King Edward VII, of England, that his favorite dish was a baked potato. Can we imagine any staple food which may be prepared in so many different ways as the potato? "Boiled with the jackets on" was, of course, the beginning of potato cookery, and this method is still a favorite, for the reason that none of the food value is lost in preparation. Potatoes at $1 a bushel, or less, give great energy for the amount invested, but, of course, potatoes have been expensive this year, and in New York they have sold as high as $5 a bushel. When they reach such prices, corn, rice and bread will provide greater energy per amount invested, than potatoes, and it is not strange that, for the first time in our history, the lowly "spud" has been missing on many American tables. I scarcely expect to see such a situation arise again. We are not likely again to have a combination of poor potato weather such as we had last year, small production of other food crops and such a tremendous export demand. In our own state I believe growers learned enough about potato growing in a dry season last year, that they would be able to accomplish greater production in another year, even though the conditions might be unfavorable.

Potatoes consist largely of starch, are great producers, are easy to transport, easily prepared for the table, and may be easily transformed by the cooks into a delicacy. Hence, we need have no fear of boycotts on potatoes, even if the price is high. It behooves every Wisconsin farmer to plant as many good potatoes this year as he can properly care for. I strongly urge careful attention to the selection of good seed, careful cultivation, and attention to the various controls of potato diseases. The potato bug and the blights, which cost our farmers hundreds of thousands of dollars every year, can be gotten rid of by spraying. Potatoes of the right weight, clean and free from scab, and free from rots in the center, are always marketable at a good price. In Wisconsin we are particularly interested in the potato, which has proved a boon to the settler, because it is the ideal first crop for the land. Let us give attention to the potato this season and raise a crop which will bring millions of dollars into our state and help solve the food problem for the nation. There is a very small surplus of potatoes in this country, or in the world for that matter, at this time. The indications are that prices will be good the coming year. I am not a prophet on the markets; neither do I pretend to be able to say about what potatoes will sell for next fall; but it is my judgment that they will bring a good, fair price, even though the production is greatly increased. Hence, I hope to see Wisconsin get into the potato game with a vim in 1917.

A TRIBUTE TO THE COW.

WISCONSIN leading the entire nation in the number and value of its dairy cattle, and dairying having reached the summit of efficiency here in our state, I believe all will be interested in a tribute to the cow which appears in a recent legal decision. The eminent judge, who was to decide the case being tried before him, declared that the cow is God's greatest material gift to man. Here is his opinion, just as it is to be found in the official court records:

The court is of the opinion that the cow is God's greatest material gift to man, closely seconded, it is true, by that of the hen. The cow is very closely associated with all human health and happiness. The ancient Buddhist, the Egyptian, the Hebrew, the European, and now we Americans, have kept and loved our cows always.

The food that needs no preparation, no cooking, but which lends itself to every branch of the culinary art—milk, cream, butter, cheese and a hundred good things into which they can be made—the cow contributes to man, reserving for herself only barely enough to keep her wonderful system in working condition. The hand of the ruthless and bloody butcher can be stayed and the awful necessity, perhaps crime, of killing living things that we ourselves may live, is met by the cow and hen. The cow is, in truth, a moral factor, and in certain of the great religions of the world she has been worshiped as divine.

We who live in the state which produces dairy products to the value of $125,000,000 a year have good reason to endorse the tribute to the cow as one of our greatest "material gifts," perhaps, in fact, our very greatest. I heartily commend the statement of the dairy expert who recently said: "Five good milk-producing cows on every farm around a town would be better factories to build up a community than those with tall stacks pointing to the skies. The cow never strikes; it puts in full time and it always gives more than it takes from the land." We are prone to forget, now and then, the great credit due the cow for our wonderful prosperity here in the Badger state. We have fertile land; we have an industrious people; but, above all, we have splendid herds, being bred up and built up to a higher standard of efficiency year by year, until Wisconsin is the envy of all the nation. God's greatest material gift to man—the cow—deserves all the good things that eminent jurists and Wisconsin farmers can say of her.

FARM LOAN BANKS READY BY APRIL 1ST.

I AM in receipt of advices from Washington to the effect that the federal farm-loan bank, which is to serve Wisconsin, Minnesota and North Dakota, and which is to be located at St. Paul, will be ready for business by about April 1st. There has been a regretable delay in opening this bank, and the eleven others which the new law provides, as the first of March is the time when most farmers desire to make, or to renew, their loans. Those who have already attended to such preliminaries as forming their associations and adopting their articles may perhaps be able to wait a fortnight longer, in view of the fact that by so doing they will be able to secure their money without the payment of any commission or bonus and for a longer time than they can secure it from private parties. I would be very glad, indeed, if farmers, who have formed associations, will write to me, giving their experiences and will tell me just what they think of the new law as its workings develop from week to week. We can all learn a great deal by thus counseling together.

My advices from Washington are to the effect that the farm-loan board has arranged for placing the first issue of forthcoming farm-loan bonds, with a syndicate of bankers at New York and elsewhere, at a rate of 4½ per cent. The rate to farmer-borrowers cannot be more than 1 per cent in excess of the rate of interest which the bonds bear. It will, therefore, in all probability, cost farmers between 5 and 5½ per cent to get their money from the government through these new banks. From the number of applications from farmers wanting loans, officials estimate that as high as $50,000,000 in bonds may be issued within the first year.

THE TRACTOR IN PEACE AND WAR.

IT IS a long way from the fertile wheat fields of the Northwest, feeding the world, to the devastated battlefields of Europe, where millions of lives have been uselessly sacrificed, yet there is a connection between the two in which every Wisconsin farmer is, or should be, interested. That connection is the tractor.

I believe I am conservative when I assert that the American tractor will play a more important part in restoring agricultural and industrial conditions in Europe, once the war is over (hasten the day!), than anything else. The manufacturer who recently declared that "the farm tractor, doing the work of several men, is going to prove the same benefit to warring Europe that the reaper did to the United States during the civil war," spoke the truth. With hundreds of thousands of men losing their arms, their hands and their legs, the problem devolves upon Europe of giving them useful employment and maintaining the man supply for necessary production. The tractor solves the problem.

I am advised that no less than 150 farm tractors have already been prepared for shipment from one grain-belt city to France, while 810 more are shortly to be sent from Minneapolis. These tractors were originally intended for the wheat fields of Minnesota, Wisconsin and the Dakotas, but they are being diverted, instead, to the fields of France, Russia and Austria-Hungary, in order that the decreased man supply may be made more efficient and the wheat fields of these war-ridden countries be put into the most productive condition possible, with a minimum of labor expenditure. The French government, so I am advised, has already appropriated money to help any farmer who will buy and use a tractor, the government paying half the original cost of the machine. Naturally, these foreign countries look to America, for this is the land of the tractor's birth, of its greatest usefulness and of its most complete development.

I confidently expect 1917 to be the greatest year the tractor has ever known. The series of tractor shows held in Madison and other grain-belt cities last year quickened interest among the farmers of this section as never before. And now comes the immense demand from war-stricken Europe. I have seen photographs of European soldiers who have lost their arms and hands and who have been equipped with steel rods and hooks, fastened to the stubs of their arms at the shoulders. By means of these devices the men can hold and use a rake or a hoe, and so perform a useful day's labor. There must be hundreds of thousands of such crippled men in Europe. There are equally large numbers of those who have lost their legs. These men must be kept busy and productive; with training, they can operate a tractor. Horses are scarce and dear in Europe; again the tractor solves the problem. Is it to be wondered at that machines, which were intended to make Minnesota, Wisconsin and Dakota wheat fields produce more, should be diverted to fields in Europe which will not produce at all unless these tractors are secured?

The world is full of extremes and contradictions; that which is one man's meat is another man's poison. The tractor which was intended to produce the wheat to feed the world has been distorted and disguised, until today it is the "tank" which the British soldiers send against the Germans, with its invincible caterpillar tread, to clamber over trenches, shell craters and barbed-wire entanglements. From production, the tractor has been diverted to destruction. Yet, there is another scene about to be set—a scene of crippled European soldiers plowing fields with American tractors and seeding them to wheat, fields which have been terribly harrowed with shot and shell for the past thirty months, drenched with human blood and fertilized with dead men's bones. It is a scene which paraphrases, "In the midst of life we are in death," and makes it read: "In the midst of death we are in life." Surely, I add, the ways of providence are inscrutable, and we are but mere blind mortals, after all.

James M. Pierce

The Wisconsin Farmer Madison, Wis.

For Wisconsin Women.

In this issue special attention is paid to matters which we believe will be of great interest to our women readers. Certainly every woman who reads this issue will want to read all about the Haberman farm home in Green county, the article starting on page 1, and when she has read it she should urge her husband to read it. This successful Wisconsin farmer-dairyman has developed one of the good farm plants of the state. It is not a place heralded far and near as a fine example of what a millionaire can do with his riches. It is a place built from the ground up with the revenues of the farm—a farm which has been well farmed and which has made good profits, and a place where the head of the house and his good wife have been sensible enough to get some personal comforts out of the profits which the farm has made.

In this issue will also be found some pointers on what the state of Wisconsin is undertaking to do for its farm women. This work, in our judgment, has not been given sufficient encouragement, but it is growing and is an important business of the commonwealth. The farmers' institute is no longer exclusively for the farmer and the hired hand. There are institutes and demonstrations for women, and it has been discovered, as might have been expected, that the farm women are just as much interested in improving the methods of their work as the men are.

This has been a year of good profits on Wisconsin farms notwithstanding the increased cost of feeds and implements and everything which the farmer has to buy. The farmer has not rolled in wealth as some of our city cousins seem to think, but he has done well in the past year and the prospects are good for another profitable season ahead. In the coming season, and in all the years in the future, we hope to see the rights and comforts of the farm women and the children always given serious consideration. It doesn't seem necessary to say that the wife and daughters are very important in the farm life. But at times it does seem necessary to insist that they have their rights. We are sure that there are no better farm women anywhere in the world than in Wisconsin and we are anxious to do our part to help them.

Value of Wisconsin Dairying.

According to figures recently compiled by the Wisconsin Dairy and Food Commission, dairy products of this state reached a total of more than $110,000,000 in 1915. The total pounds of dairy products produced and the revenues from the same are shown in the table which appears on this page. These are about the most reliable figures which have been issued since the census of 1909. The figures on farm-made butter given in this table are taken from the census report of 1909, the other figures having been gathered from operators of butter and cheese factories and condenseries and are believed to be fairly accurate.

The value of milk produced other than that furnished cheese and butter factories and condenseries was estimated as the amount used for family consumption by the total population of the state, which population is taken as 2,500,350 (figures reported by the United States Census Bureau, July 1, 1916). In estimating this amount, one pint per capita per day was used and the milk valued at 1½ cents per pint.

In obtaining the estimate for the value of milk and cream shipped to Chicago, St. Paul, Minneapolis, Dubuque and other points, the figures given in the report for 1909 were increased 18 per cent, being the per cent of increase in factory butter production for that period.

Skim milk was valued at one-half as much per hundred pounds as shelled corn is per bushel, and the value of whey at one-half of skim milk. The value of shelled corn was placed at 73 cents per bushel.

Now that the dairy products of the state have passed the $100,000,000 mark, Wisconsin will begin looking toward new figures. Everyone realizes that we are by no means near the limit of possible dairy production in Wisconsin. An increase to $200,000,000 worth of dairy products within the next few years is by no means outside the range of possibility. This may be accomplished by the extension of dairy business into our own newer counties and by closer attention to it in the older sections.

The Dairy Industry of Wisconsin Is Making Progress

Official figures by the Wisconsin Food and Dairy Commission on the value of dairy products produced in this state in the year 1915:

	Pounds	Received for or valued at
Cheese produced in factories	234,929,037	$32,835,922.53
Other cheese factory products sold		636,328.16
Cheese produced on farms	1,433,702	90,118.00
Butter produced in factories	124,636,071	34,744,744 51
Other butter factory products sold		1,307,079.27
Farm-made butter	7,952,480	1,750,948.00
Products of milk condenseries	396,607,532	9,138,520.79
Milk produced other than that furnished cheese and butter factories or condenseries		13,689,416.25
Estimated value of milk and cream shipped to Chicago, St. Paul, Minneapolis, Dubuque and other points outside of Wisconsin		3,062,100.00
Skim milk		8,973,797.11
Whey		3,382,978.13
Estimated value of milk and cream, not otherwise reported, used in the manufacture of ice cream		630,000.00
Total		$110,242,382.75

Value of Manure Spreader

By spreading four tons of manure on land once every four years much larger returns will be obtained from the fertilization than by applying twice that amount once in eight years. This looks reasonable to most any farmer even though he has never made actual comparisons. However, looks are sometimes deceiving and it is not safe to make such statements unless one has direct evidence to back them up. A good many tests of this matter have been made by various experiment stations both in this country and Europe tending to show that frequent light dressings of manure yield larger total returns than infrequent heavy applications. Thus as an average a seventeen years' test at the Ohio Experiment Station at Wooster, eight tons of manure per acre applied to corn in a three-year rotation of corn, wheat and clover has produced twenty-five bushels more corn than land receiving no treatment. Four tons of manure to the acre on both corn and wheat in a five-year rotation of corn, oats, wheat, clover and timothy has produced an increase of 14.3 bushels of corn, as an average of twenty years. Eight tons of manure on the same crops in the same rotation has increased the corn yield only 23.8 bushels during this period. In other words, doubling the amount of manure has increased the corn yield only 66 per cent.

In any soil, in some more than in others, there is always some loss of fertility from leaching and fermentation and the greater the surplus of available or soluble plant food in a soil at one time the greater the loss from the causes mentioned. It is because of this fact that the manure spreader is so valuable. With it one can apply manure at the rate of six tons per acre as easily as twelve tons. It is a practical impossibility to apply manure to a soil so evenly and thinly by hand as by means of a spreader. Were there no other advantages in the use of a spreader than this one it alone would be enough to amply justify its existence. There are, of course, many other reasons why it pays to own a spreader. It is a labor and time-saving machine. It is impossible to find a hired man who will take the pains to spread manure evenly by hand. He usually leaves it in big lumps and thus fertilizes some spots so heavily that the manure is actually a detriment in the most heavily covered patches the first year after its application when it should be of the greatest service. Not until the excess fertility has leached out of the heavily covered spots are good results obtained.

A manure spreader will pay for itself in a short time. It should be used on every live stock farm. Men with small farms should co-operate with their neighbors and buy a spreader in partnership. While owning a spreader in partnership is not so satisfactory as exclusive ownership, it is nevertheless better than depending upon hand spreading.

A Notable Year Ahead.

With the war cloud lowering ominously over this country, and with such an international crisis imminent as has not been known for several decades, it is highly important that every man and woman, whether they reside in city, town or country, keep posted on developments of the day. Because of this fact The Wisconsin Farmer will devote special attention, in its editorial columns for the next few months, to an unprejudiced and accurate account of the week's happenings as they affect our national welfare and particularly as they affect the interest and prosperity of the farmers of this section. This being the situation, we believe that not a single member of the large circulation family of The Wisconsin Farmer can afford to miss a single issue of this paper in the coming year. We, therefore, earnestly urge that every subscriber see to it without delay that his name is continued upon our circulation lists for the coming year, at least. Those whose subscriptions will shortly expire should write to us and send us their personal check, without delay. If they will also call the attention of their friends and neighbors to the fact that The Wisconsin Farmer is the most thorough, practical, entertaining and instructive farm weekly published in this section today and will ask them likewise to subscribe, we shall be enabled to make this paper bigger, more entertaining and more valuable to every member of the farm household during 1917 and the coming years than ever before. We must have the co-operation of our subscribers, and to this end we urge that they attend to the important matter of their subscription without any delay whatever.

Use Millet as Nurse Crop.

The question of handling a thin meadow is a subject that has attracted the attention of several of our readers. In the following communication Mr. A. L. Foote recommends the practice of using millet as a nurse crop along with the grass seed. He writes:

I notice advice is wanted about adding to thin meadow. I have some of the same and I shall sow more seed and millet as soon as I think the millet will grow well, then harrow lightly with teeth slanting back so as not to disturb the grass already there. The millet can be covered a good deal easier than oats and millet and clover and timothy will make good hay. Cut just before the seed is ripe and that will leave the field smooth and in good shape for hay the next year and it is but little work.

It must be remembered that millet is a warm weather crop and, therefore, it cannot be seeded very early in the spring. It will do quite well, however, if sown about the time the soil is warm enough for corn planting. It is a rapid grower and it will be much better to have a hay crop composed of millet, timothy and clover than a mixture of weeds, timothy and clover, which is bound to be the case wherever a thin meadow is not supplemented in some way.

Wisconsin Holstein Meeting.

On page 13 of this issue will be found a report of the annual meeting of the Wisconsin Holstein Breeders' Association, held this year at Manitowoc. The meeting was a decided success and proves the splendid advancement which has been made in organization of the Holstein interests of the state. Of course, there is a great deal yet to do. With 270 members it is plain to be seen that the association has yet to secure for its roll a very large number of good breeders before it can be said to be representative of the "black and white" interests in the state. But no one expects to get all this work done at once, and the men who have been faithful while the association membership has been light, will certainly be pleased to note the progress which has been made and will regard this progress as prophetic of still greater advancement in the future. We are glad to see the Holstein breeders going after the national meeting in 1918. It indicates that they are alive to the benefit of these great national gatherings of breeders. Wisconsin should by all means have the 1918 meeting, and the breeders from states far and near need have no fear that Milwaukee and Wisconsin Holstein interests will give them a cordial and enthusiastic reception. It is apparent that the Wisconsin Holstein Breeders' Association is coming in for bigger things in the future, and all Holstein breeders of the state will be sure to profit by this activity.

Tuberculosis Among Hogs

Statistics show that 9 per cent of all the hogs slaughtered in 1916 in houses having government inspection were infected with tuberculosis in some degree. In some sections 25 per cent of the hogs are affected with tuberculosis, judging from receipts at slaughterhouses. Hogs coming from dairy districts are usually found to be infected with tuberculosis to a greater extent than those from beef-producing sections. This is due to the fact that hogs may contract tuberculosis from milk of tuberculous cows. Unless buttermilk and skim milk from creameries and separator stations are pasteurized before they are taken back to the farms, these institutions frequently become distributors of tuberculosis.

One or two herds of tuberculous cattle, for example, may contaminate all the by-products of a creamery and thus distribute the disease germs throughout the entire neighborhood in which they are distributed. It is unsafe to feed unpasteurized creamery buttermilk or skim milk to hogs because it is almost certain to carry germs of tuberculosis. Heating such milk to 170 degrees Fahrenheit for one minute will destroy the germs of tuberculosis. The same thing will be accomplished by heating it to 145 degrees for forty minutes.

If you are in doubt as to whether your hogs are infected with tuberculosis or not, you can easily test them by what is known by the intradermal test. This test is described in Farmers' Bulletin 781, which can be secured free of cost from the department of agriculture, Washington, D. C. This bulletin treats the subject of tuberculosis in hogs very fully and should be in the hands of every hog producer who wants to understand how it can be eradicated from any herd in a very short time.

A National Proclamation

The Greatest Incubator BARGAIN Ever Offered

For years we have manufactured the good old reliable National Incubator. For years we have successfully started thousands in the profitable poultry business, and during all these years we have longed to build a bigger, better, simpler machine to sell at a price everyone can afford. At last we have accomplished our desire. Our 1917 National with all late features and improvements is a revelation to the poultry world. Think of it—**165 Egg National Incubator for only $10.00, freight prepaid—On 40 Days Trial—Backed by Our Money Back Guarantee.** Your hard earned dollars cannot buy greater hatching value. You cannot equal this exceptional offer anywhere. Take no chances. The National is simple, compact, durable, economical—***and remember it is***

Built on "Uncle Sam's" Specifications

as outlined by the U. S. Dept. of Agriculture in Farmers Bulletin No. 236. We want to prove to you that the old reliable National Incubators are the best built, best equipped and most durable machines made for the money. Here's how we built the National. Hot water heating plant—Double wall—Dead air space between—Double glass doors—**Special high grade cold rolled copper tank**—Asbestos lining—Famous National regulator and boiler—Self Regulating—Self Ventilating—Safety lamp—Teste, thermometer—Metal case (which makes it sanitary, air tight and non-shrinkable). **No extras to buy.** Not a cheap tin covered machine. Easy to operate. Will not warp or shrink. Pays for itself many times in one season. With proper care will last a lifetime.

165 Egg National Incubator

ONLY $10
Freight Paid East of the Rockies

The National Brooder Better Than The Hen

Protects the chicks from all harm. Keeps even temperature—properly ventilated—strong—durable. The hen loses too many chicks before they are old enough to care for themselves. Don't take chances—be on the safe side. We will send prepaid this great combination.

165 Egg Incubator
165 Chick Brooder **Both $12.50**

and on **40 Days Trial** 12 Year Guarantee

We have built thousands of incubators, but never have we offered such amazing value. **The National contains every modern operating convenience.** We guarantee it to be faultless and will replace any defective part for five years. It is the greatest incubator value ever offered.

Send In Your Order Direct

To save time you can order direct from this advertisement. You risk nothing. Try the National for 40 days—compare with your neighbor—put it to the greatest of all tests—**THE HATCH.** If you are not satisfied it is the greatest incubator bargain you ever saw return it at our expense—we will promptly refund your money. We know you will not return it after your first big hatch of strong healthy chicks. You are absolutely safe. **We deal fair and above board—no red tape.** The publisher of this paper knows we will stand back of our word.

What Users Say—

The incubator you kindly sent the Agricultural class of the Garretville High School proved a wonderful success. The simplicity of putting the parts together; the ease of regulation; are virtues which speak for themselves. We recommend your machine to anyone. G. H. S. Agricultural Class, Ohio.

Please ship at once 165 egg machine. My other one is O. K. Got fine chicks my first hatch. Harry Neff, W. Va.

I find everything just as you advertised it. Mrs. M. G. Potter, Mich.

Why Take Chances

Safety Lamp

Cannot explode or ignite — reliable, unbreakable. Produces steady blaze without smoke or fume.

A sputtering, fuming, unreliable lamp will spoil your hatch and may cause fire.

FREE Our Big New Book "Poultry Notes" FREE

Just write your name and address plainly on a post card or letter and ask for this New Book. No matter whether you hatch 10 or 10,000 chicks you need this great book. It is far more than a catalog. Tells all about the care of eggs and chicks. All about this great hatcher and the men behind it. **Worth dollars to every poultry raiser.** Just the thing for beginners. Don't fail to get it when the coupon or a postal will bring it.

We have raised poultry for years. We have built thousands of incubators, making it a conscientious study, but never in the history of our company have we offered such amazing values. We have worked for years to perfect this exceptional machine. We are mighty proud of this incubator—you will be too when you get your first big hatch. Use it the year around. Its perfect construction, simplicity, wonderful heating plant and metal covering all combine to give it the greatest hatching value.

Our Money Back Guarantee PROTECTS YOU

Take no chances, the hatching season is too short. **This dependable Hatcher is the largest, simplest and best machine on the market for the money.** Money cannot buy greater hatching value. You cannot fully appreciate this wonderful machine until you have tried it. **The National gets big hatches when days mean dollars.** Order this dependable hatcher today or send for big book and read what users say.

WASHING MADE EASIER

Running Water and Power Machinery in the Laundry Will Take the Blue Out of Monday—By A. L. Marlatt.

THE farmer has to solve his labor problem through the use of more power machinery, by reducing the size of the farm, or by increasing the employment of farm labor. In somewhat the same way, one of the heaviest "beast-of-burden" labors of the farm home may be solved either by sending the washing out to a laundry, which may be run in co-operation with a creamery, or through the introduction into the home of power washing machinery—a possibility in a very large proportion of farm homes. With the power machinery, there should be running water in the laundry room as well as in the kitchen, so that what is so often provided for the stock at the barn may be provided for the woman who works in the home.

THE LITTLE MOTOR RUNS BOTH THE MACHINE AND THE WRINGER, AND THUS THE HARDEST PART OF THE WORK IS LIFTED FROM THE SHOULDERS OF THE HOUSEWIFE

Piping from the cistern to the pump in the kitchen will at least do away with a part of the labor required in carrying water for all purposes.

"The getting of the water from the source of supply to the point of application requires," we are told by good authority, "more manual labor than any other item of housekeeping. The water for the kitchen has to be lifted from the well, carried to the kitchen, poured out of the kettle into the dishpan, and from the dishpan out of doors. This makes six times the water is handled; and a bucket of water, containing two gallons, with the containing vessel will weigh twenty pounds. When this is handled six times, the total lifting is 120 pounds. The cooking of three meals a day on a meager allowance of water will necessitate ten buckets, which will make for cooking alone 1,200 pounds of lifting per day. When to this is added the water necessary for bathing, scrubbing, and the weekly wash, it will easily bring the lift per day up to a ton; and the lifting of a ton a day will take the elasticity out of a woman's step, the bloom out of her cheek, and the enjoyment out of her soul."

But this is not the most serious part of the difficulty. Studies made by the United States Census Bureau have shown that the infant mortality among workers in textile mills is not so great as among the women who live at home, and do their own work, which includes carrying water from the well to the house, doing washing, and emptying heavy tubs of water. If this one weekly burden could be relieved, the records of our own state board of health would not show that a larger percentage of babies die in the first month of life in the country than in the city.

The first remedy is running water in the house. This can be secured through the use of a force pump, either run by windmill power, by gasoline engine, or by hand power. Pumping is not such hard work as lifting.

The second, the use of a washing machine, which will do away with much of the mechanical work in washing.

WITH RUNNING WATER, STATIONARY TUBS AND POWER MACHINERY, WASH DAY IS NO LONGER TO BE DREADED

The third, tubs that may be emptied without lifting the water, will ease the strain on tired backs.

Any washing machine is better than none. The best types are those which remove dirt from the clothing by sucking the water back and forth through the stationary clothing. There are machines on the market which clean the clothing by mechanically moving the clothing through the water. These, while good, are not so desirable from a mechanical point of view, although they are often cheaper in the first cost.

To empty the water from the tubs—even the ordinary galvanized tub—six feet of hose may be used as a siphon to drain water into a trap in the floor which connects with a tile leadin out to a lower level beyond the immediate yard of the house. If this tile is put below the freezing line and used only as a drain for the laundry water, it will lighten the labor in the farm home tremendously.

A water barrel may be used in even the most inexpensive farmhouse. A few minutes at the force pump will supply sufficient water to supply the needs of the house for the day. The expense of the force pump and piping from the cistern to the house may be as low as $25 for pump, pipe, sink, barrel, and necessary brackets and faucets.

To use the rubber tube as a siphon, close one end of the tube with pressure, fill with water and close the other end, pressing with the fingers. Without removing pressure, insert one end in tub, always keeping below surface of the water, and extend the other end toward trap in floor. The moment the pressure is removed, the water will siphon through the tube from the tub into the trap.

Drying the clothes in very cold weather is always a serious problem from the standpoint of the clothing and from the standpoint of the woman's health. Going from a hot, very moist room into the freezing air out of doors is often the beginning of ill health. The use of a room in the house in which the clothes may be dried is not always either advisable or available. The balcony drier, an attachment to the tail of the porch, may not be ideal, but it will at least remove some of the bad conditions.

If there is an enclosed porch, the use of the pulley clothesline extending out into the yard may allow the worker to stand in the enclosure while hanging out the clothes.

Better yet, a wall-armed drier may be fastened to the walls of the porch, so that the clothing may dry in an enclosed space, but where sunshine can fall upon it.

Agriculture in Rural Schools.

[Editor's Note.—The following paper was read by F. J. Sievers, superintendent of the Milwaukee County School of Agriculture, before a farmers' week audience at Madison last month. Mr. Sievers brings up points in connection with our schools which are well worthy of careful consideration.]

We know that our farmer today is not only much more prosperous than he was years ago, but he is also happier and more prosperous than any other artisan. In spite of all this evidence, we find that the boys and girls are still continuing to leave the farm to enter fields where the opportunities are not nearly as gratifying. Let any young man, who has left the farm and has been successful in a city occupation (and these farm boys are nearly all successful) just stop for a moment and analyze the situation and he will find, I am sure, that it was the ambition of practically every energetic boy or girl of his age to leave the farm at the time when he left it. It takes this same person less than eight or ten years of city life to help him decide that he made a wrong move.

If this is the case, is it not conclusive evidence that there is something wrong with the rural educational system that is supposed to instruct our country boys and girls, and does it in such a way that a discount is placed on the most profitable occupation that these individuals can enter into; in other words, that they do not learn to know their opportunities until after they have left school and have been taught them by their own experiences.

It seems to me that our secondary educational institutions, and here I am referring particularly to the rural district schools and the high schools, deserve consideration criticism for not making a stronger attempt to educate the people in their community to fill their best place in the commercial world. In other words, if we know, as we should, (if government statistics are worthy of consideration), that there is a shortage of agricultural workers to such an extent that it becomes a national problem, is it not the business of our secondary educational institutions to solve this problem by pointing out these opportunities to the younger generation instead of hammering away on some antiquated course of study just because it permits itself to be easily followed by our educators.

Some of the factors that have been instrumental in bringing about this unbalanced condition of society, where we have too large a population in our city and too low a population in our rural communities, are as follows:

First—A successful teacher, be he either man or woman, will impress his own standards so decidedly upon the class that that standard becomes the standard of every one of the pupils. At the present time very few of our country school teachers, and this applies to the high school teachers as well, are products of the rural communities and, therefore, are not in sympathy with agricultural work. On the contrary they are not only out of sympathy with the leading industrial occupation in this country, but they have many times chosen a professional future for themselves which will take them away from anything that is closely allied to agriculture. This has a direct effect on the individual pupil in that he or she soon decides that an occupation that does not permit the wearing of a linen collar every day in the week, as well as on Sundays, is not dignified enough for the pupil's consideration.

Second—The course of study in our rural secondary schools is such that very little emphasis is placed on agriculture. Instead of making it the center around which all other subjects should revolve, it is oftentimes made a side issue. First for the reason that it is a practical subject and, therefore, is hard to teach, and second, because the teacher is many times very poorly informed on the subject and naturally takes the course of least resistance, which is in the direction of subjects with which he is more conversant and which allow themselves to be woven into the daily routine with the least inconvenience.

In conclusion, let me say that our agricultural work in the secondary schools has lost out in several places, viz.:

It has been presented in a lukewarm fashion, just because it was required.

It has been presented by individuals who could not show up the practical phase of the work advantageously, even if they had so desired.

Wisconsin yields more corn per acre than any other Mississippi valley state.

PAIGE

The Most Beautiful Car in America

Power, Beauty and Dependability

FEW of us have the need or desire for a racing car. We are quite content to let the "other fellow" take his chances at 70 miles an hour—while we spin along comfortably and safely with the speedometer needle registering 25 or 30.

But *every* man wants Power in his automobile—and particularly the farmer.

It is good to sit behind a motor which responds eagerly—buoyantly—to the slightest touch of the throttle.

It is good to know that you need only "step on" the accelerator—and the steepest hills will flatten out like smooth boulevards.

It is good to realize that you command a vast store of reserve power which will easily take you through the heaviest sand roads "on high."

It is good to know that your automobile is a staunch, sturdy, dependable helpmate—not a treacherous weakling that will lay down when the real work begins.

In a word, it is good to own just such a car as the five-passenger Paige Linwood "Six-39." This car is a thoroughbred—every inch of it.

It is just as handsome as an automobile could possibly be, and easily capable of doing 60 miles per hour if you desire to travel that fast. But—first and last—it is made for work—*consistent* work—*day in and day out work.*

Remember, Paige owners don't have to make apologies or "offer excuses." Their cars are out of commission at one time only—when they are locked up in the garage at night.

And—best of all—you can readily establish these facts for yourself.

All that you need to do is get in touch with the nearest Paige dealer.

Let him *prove* his case. Let him introduce you to men who have invested their money in Paige cars. Listen to their experience—ask for their honest opinions.

Then, you will know whether Paige cars are reliable under all circumstances.

Then you will know whether Paige cars are economical to maintain.

Then you will know whether Paige is the type of car that *you* have been looking for.

Do this—while the Dealer can still make immediate deliveries.

How Old was The Old Oaken Bucket?

THE "iron-bound" bucket that hung in the well was covered with moss but the hoops were always tight and the bale was always secure. Time left its impress on the wood and on the metal but *rust* did not eat through the iron although the bucket was subjected to the severest of exposures. The iron was *pure* iron and pure iron resists rust.

"ARMCO" IRON CORRUGATED CULVERTS

By chemical analysis these are purer iron than were the hoops of the old oaken bucket. Under similar conditions "Armco" Iron should outlast even the old-fashioned iron. Under highways and railroads all over the country, "Armco" Iron Culverts give service like that of the old oaken bucket. They are the only metal culverts that can be counted on to outlast the generation that installs them.

A Wisconsin Short-horn Success.

Methods of Breeding and Types of Animals Which Have Brought Wisconsin Firm to Forefront in Short-horn World.

SHORT-HORN breeders in Wisconsin have since the early days taken an active interest in the development of the state as a home for breeding stock. The first herds started many years ago are in a large part still in existence. Younger men are carrying on the work of their fathers and by intelligent culling and selection keeping up the high mark set by the early breeders.

A well-established firm in the state is that of Herr Bros. & Reynolds, consisting of the brothers, Charles and George Herr, and Wallace and Ralph Reynolds. Their farms are located near Lodi in Columbia county. The partnership is a most interesting one. Under the system each man owns and breeds his cattle separately. All advertising and showing, however, is done in the name of the firm and all members must share equally in the expense. And now comes the peculiar part of the partnership. When an animal is sold the entire price belongs to the member from whose herd it came. The buyer might have become interested through reading the advertisement paid for by all members, but the sale is strictly between the purchaser and the man from whose herd the animal was selected. He might come to Wallace or Ralph Reynolds to look over their cattle. Before he decides on a purchase he is shown the herds of the others so that his choice is made only after all herds have been visited. One would imagine that hard feeling would crop out sooner or later under an arrangement of this kind, but there is not one case on record. Each of the four men have the utmost confidence in their ability to breed stock that will sell and in the honesty of the others.

MASTER RUBY, ONE OF THE HERR BROS. & REYNOLDS HERD SIRES.

There is some uniformity in the breeding work followed on the different farms. On the day the writer visited the place of Ralph Reynolds we saw in the feed lot a number of high-priced imported heifers recently purchased on the Canadian markets. On one side of the barn three heifers of beautiful type were chewing their cud, two of the Jassamine and Broadhooks families and the third Imp. Snowdrop. They alone represented an investment of nearly $3,000. Close to them were several good-sized, straight heifers of Wimple, Lavender, Clara, Mayflower and Matchless breeding, all bought this winter. The total investment for additional breeding stock represented in that one lot must have been very close to $10,000. This stock will be resold at cost price to be used on the different farms. This will result in a strengthening of the lines of breeding in the individual herds. Ralph Reynolds, who conducts most of the firm's business, is always on the lookout for likely heifers. The other members by no means leave the work of selecting the new stuff entirely to him, however. Each is in close touch with transactions in the Short-horn world and nothing is in the way of any one if he wishes to invest in an animal of his liking.

A. R. Reynolds was the first breeder of Short-horns in his community, but he soon managed to interest his two brothers-in-law to go into the Short-horn business with him. That was the beginning of the firm of Herr Bros. & Reynolds. As Ralph, the oldest son, grew to manhood the father took him in as a partner. When Wallace, the second son, finished his course at the Iowa Agricultural College the father retired and gave him his share of the partnership. Wallace finished his schooling with high honors, being rated one of the best cattle judges the college ever turned out. He was on the team that won first honors at the Kansas City Royal Show in 1913, and he had the honor of being the best individual judge in the contest. At the International at Chicago during the same year he placed high again in individual judging, though not first. His schooling did not wean him away from the Short-horn. On the contrary, it strengthened his faith in this great breed. His efforts so far indicate that he will follow the cattle game with the same success that his father had. At the recent International he showed under the firm's name the prize baby beef steer which won first in the Short-horn steer calf class and was reserve champion Short-horn of the show. His herd consists of about forty-five head, for the most part made up of such families as the Averne, Missie,

CUMBERLAND LASS, FIRST-PRIZE JUNIOR YEARLING, JUNIOR AND GRAND CHAMPION, WISCONSIN STATE FAIR.

Duchess of Gloster and Wedding Gift. About twenty cows form the foundation herd, but this number is to be increased during the coming year.

Ralph Reynolds has a farm adjoining the old homestead occupied by Wallace. They live close enough so that they can call to each other in case the telephone is out of order. Ralph has a farm of 180 acres and in the main both follow the same system of cropping. All the feed is used on the farm and marketed through the cattle. A rotation of corn, oats, clover and alfalfa is giving excellent satisfaction. There are fifty head of Short-horns on Ralph's place, including some of the best-known families of the breed. The herd is headed by Master Ruby, who has besides the many show-ring honors the better recommendation of his healthy and strong calves. He is only four years old and not fully developed in all respects. He has all the requirements of a herd header. His strongest points are his size and the level way in which he carries out over the rump and his extraordinary depth of chest and body. His calves have been in on the money wherever they have been exhibited. This bull is also used by Wallace on his cows. The families in this herd consists of Bruce Mayflower, Wimple, Clara, Lavender and some Matchless blood with a strong strain of Sultan running through the entire herd. In the early days the bull, Royal Sultan, was used on all the herds and a little later his son, Golden Sultan, was also used on most of the cows, so that there is a strong trace of Sultan blood in the foundation stock of all the herds. Answering inquiries, handling the advertising and doing a good part of the show work when the season is on keeps Ralph on the jump. But he keeps a cheerful disposition in spite of the large amount of detail work that falls to his lot and it is a pretty sure thing that when he has done a job that it has been done in the right way.

ROYAL CHOICE, FIRST-PRIZE JUNIOR YEARLING AT IOWA AND MINNESOTA, 1914. SOLD TO AMERICAN SHORT-HORN BREEDERS' ASSOCIATION FOR EXPORT TO ARGENTINE.

The Herr brothers, George and Charles, are cattlemen from the ground up. They had their first experiences with range stuff, but soon saw the advantages in breeding pure-bred cattle for sale. George Herr has on his farm of 280 acres sixty head of excellent Short-horns. Much of this stock is out of cows bred to White Rock, a son of Whitehall Sultan. Charles Herr has a little larger farm than his brother, but keeps about the same number of cattle. His herd is largely sired by Cumberland's Ideal, now no longer on the farm. At the present time Village Valentine, a son of Villager, heads the herd. Both George and Charles are beginning to use a son of Master Ruby out of a Violet cow. This bull, called Ruby's Knight, clearly shows his breeding in that he possesses the strong points of his sire—size, length, straightness over the rump and strength of back and constitution. With the excellent blood in these herds, such as the Victoria, Barmpton Leaf, Queen Marion, Golden Venus, Wimple and Clara, future products from these two establishments ought to attract considerable attention on the Short-horn market.

QUEEN AVERNE, FIRSE-PRIZE TWO YEAR OLD AND SENIOR CHAMPION AT WISCONSIN STATE FAIR.

The following is a summary of the winnings at the Wisconsin State Fairs during the last three years:

Wisconsin State Fair, 1914.—Aged bull, 2d on Golden Sultan; junior yearling bull, 1st and 2d on Master Ruby and Royal Choice; senior bull calf, 3d on Combination; junior bull calf, 2d on Double Sultan; senior yearling, 2d and 3d on Sultan's Beauty, junior yearling heifer, 1st on Queen Averne; senior heifer calf, 1st and 2d on Marion Queen and Miss Holly; junior heifer calf, 2d on Cumberland Lass; junior and grand champion bull, Master Ruby 446601; junior champion heifer on Queen Averne; 2d aged herd; 1st young herd; 2d calf herd; 1st on get of sire on get of Golden Sultan.

Wisconsin State Fair, 1915—Two-year-old bull, 1st on Master Ruby, 2d Royal Choice; junior yearling, 2d; senior bull calf, 2d on White Robin; junior bull calf, 3d on Royal Victor; aged cow, 1st on Woodland Holly; two-year-old heifer, 1st on Queen Averne; senior yearling heifer, 5th on Miss Holly; junior yearling heifer, 1st on Cumberland Lass; junior heifer calf, 4th on Duchess Last; senior and grand champion bull, Master Ruby; senior champion cow, Queen Averne; junior and grand champion female, Cumberland Lass; 1st on aged herd; 3d on young herd; 3d on calf herd; 3d on get of sire; 1st on produce of dam.

Wisconsin State Fair, 1916.—Junior yearling bull, 1st on Royal Choice 2d; senior bull calf, 3d on Ruby's Knight; junior bull calf, 6th on Royal Ruby; senior yearling heifer, 2d on Lady Holly; junior yearling heifer, 1st on Duchess Last; senior heifer calf, 4th, 5th, 6th and 7th on Goldie's Ruby, Rare Gift, Ruby's Garland and Village Princess 7th; junior heifer calf, 5th and 6th on Sadie and Lancaster Maid 2d; 1st on young herd; 2d on calf herd; 2d on get of sire; 1st on produce of dam; junior champion heifer on Duchess Last. Only young stock shown in 1916.

"I went to find the finest light six regardless of price," said the man back from the big shows, "and this was the combination of values for me: *Extra* room, deep-tufted *genuine* leather upholstery, the power and flexibility of a *specially built* Continental six motor, Timken axles front and rear, multiple disc clutch, automatic ignition, push button starter, everything in and on in the form of equipment." That car is the Velie. Eight body styles. See them at your dealer's. Catalog on request.

Velie Motors Corporation, 118 Velie Place, Moline, Ill.

Cow-Testing Reports.

Some Official Records.

To the Editor:—Hutchinson Bros. & Eurbach made a twenty-five-pound three-year-old official record in February. Henry Dolan made one twenty-two-pound and one twenty-pound record, three years, and Hurelle & Wheeler made a seventeen-pound two-year-old record and one seventeen-pound three-year-old record.

We are going to try to have a farmers' institute for Columbus next winter.

In the month ending February 12th we had fifty-eight forty-pound cows on our list and twenty fifty-pound cows which is the best record ever made here. The following had herd averages of over thirty pounds for the month: Alex Westfall, 32.9 pounds; C. S. Steinbach, 37.7 pounds, Wm. Breyer, 31.7 pounds, Peter Larson, 39.6 pounds; J. E. Barstow, 31.9 pounds; A. F. Barstow, 33.9 pounds; Hutchinson Bros & Eurbach, 35.8 pounds.

Eight inferior cows were sold from our association herds this month. The forty-five-pound list for the month ending February 12th is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Good Work in Taylor County.

To the Editor:—I believe that Taylor county may well be proud of its third month's work in cow testing. In January two pure-bred Guernsey sires were bought. Bessie, a grade Holstein cow, owned by Henry Suter produced 66.1 pounds of butter fat from 1,537.6 pounds of milk, testing 4.3 per cent. The list of forty-five-pound cows or better for the month ending February 15th is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Henry Suter					
Bessie, G. H...	5	Dec.	1537.6	4.3	66.1
Frank Halopka					
Lady, G. H....		Dec.	1523.9	4.1	62.47
Rudolph Baehler					
No. 4, G. H....	8	Nov.	1529.0	3.7	56.5
No. 7, G. H.....	6	Nov.	1285.8	4.0	51.4
John Gamper					
Heilo Rue Bernning, R. H.....	8	Dec.	1556.0	3.4	54.4
Mrs. Mat Hientz & Sons					
B. B. No. 5....		Nov.	897.7	5 9	53.00
Schuster No. 3, G. G.	5	Dec.	921.1	5.4	49.7
Charles Pitzke					
Julia, R. H....		Oct.	1500.0	3.4	51.00
Sam Suter					
Sterney, G. H..	4	Jan.	1292.4	3.8	49.1
Molly, G. H....	4	Dec.	1358.5	3.6	48.9
Bessie, G. H. ..		Nov.	1357.4	3.6	48.8
Jersey, G. H...	8	Nov.	1064.2	4.4	46.8

A. T. Zeddies, Official Tester Medford Cow-Testing Association
W. R. Brecke, Secretary.

Sparta-Tomah Association.

To the Editor:—For the thirty days ending February 14th, nineteen cows in our association produced forty pounds of butter fat or over. Several fell just on the forty-pound mark. Several cows which had produced some thirty odd pounds in the month of January graduated to the forty-pound list. We believe the scales and Babcock tester are the best guide for seller and buyer of dairy cows. Our forty-five-pound list or over for the thirty days ending February 14, 1917, is as follows:

Owner and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
R. B. Robertsen					
Guern.	6	12-20-16	914	5.4	49.3
Guern.	6	12-18-16	961	6.1	58.6
J. W. Leverich					
Gr. Hol.	7	11-20-16	887	5.3	47.0
Gr. Hol.	8	12-18-16	1302	4.3	56.0
Gr. Hol.	7	12-22-16	1426	4.0	57.0
Geo. Jordan					
Gr. Guern.....	6	1-12-17	1041	4.3	44.7
Jacob Poss					
Hols.	8	2-13-17	1562	4.6	71.8
Gr. Hol.	7	12-16-16	1416	3.2	45.3
Frank Selback					
Gr. Hol.	9	1-6-17	1333	3.6	48.0
W. J. Brennan					
Gr Hol.	6	12-25-16	1196	3.7	44.2
E. E. Wyatt					
Jersey	4	1-30-17	1085	4.3	46.6

Jacob Poss had the highest producing cow, a pure-bred Holstein. She gave 1,562 pounds of 4.6 per cent test milk and made 71.8 pounds butter fat. Mr. Poss' herd also averaged the highest with 1,168 pounds milk and 43.5 pounds butter fat with seven cows. No. 11, a grade Holstein of J. W. Leverich made 43.6 pounds fat in the sixth month of her lactation period.

C. P. Chrysler, Official Tester.
W. J. Brennan, Secretary-Treasurer.

DELCO-LIGHT

For the first time electric light and power are available to anyone—anywhere.

Heretofore, the benefits of electricity have been confined to those who live in the larger towns and cities.

Now Delco-Light makes electric current universally available.

Delco-Light is today furnishing thousands of farm-houses with brilliant, convenient, safe and economical light.

It is furnishing power to operate pumps, washing machines, churns, cream separators, milking machines, vacuum cleaners, etc.

It is lighting country churches, stores and public halls.

It is furnishing light and power to summer homes and camps, to houseboats and yachts, etc.

It is lighting rural railway stations and construction camps.

It is lighting the camps of United States troops on the Mexican border, and it is disclosing heretofore undreamed-of beauties in the depths of Mammoth Cave, Kentucky.

Altogether, over 15,000 Delco-Light plants are in operation, and Delco-Light offices and service stations are to be found in almost every part of the world.

Delco-Light is a complete electric plant—the engine and dynamo in one compact unit, combined with a set of specially built and wonderfully efficient batteries for the storing of current. The plant is so simple a child can care for it, and so economical that it actually pays for itself in time and labor saved. It operates on either kerosene, gasoline or natural gas.

CURRENT EVENTS

THAT Germany, in planning unrestricted submarine warfare and counting its consequences, proposed an alliance with Mexico and Japan to make war on the United States, if this country should not remain neutral, was disclosed last week. The newspaper story to this effect, setting forth diplomatic correspondence, was verified the day after its publication by President Wilson and Secretary of State Lansing. The disclosure made the biggest sensation of recent years in official Washington, and throughout the nation generally, and chrystallized public sentiment until congress promptly gave the president the support which he has long asked, but which has heretofore been denied him. According to the disclosures, Japan, through Mexico mediation was to be urged to abandon her allies and join in the attack on the United States. Mexico's reward was to receive general financial support from Germany, reconquer Texas, New Mexico and Arizona—lost provinces—and share in the victorious peace terms Germany contemplated. Details were left to German Minister von Eckhardt, in Mexico City, who by instructions signed by German Foreign Minister Zimmerman, at Berlin, January 19, 1917, was directed to propose the alliance with Mexico to General Carranza, and suggest that Mexico seek to bring Japan into the plot. These instructions were transmitted to von Eckhardt through Count von Bernstorff, former German ambassador here, now on his way to Germany under a safe conduct obtained from his enemies by the country against which he was plotting war. Germany pictured to Mexico, by broad intimation, England and the entente allies defeated; Germany and her allies triumphant and in world domination by the instrumentality of unrestricted warfare. The Japanese ambassador to the United States immediately declared that his government had not been a party to the plot. That Mexico was interested, however, is almost a foregone conclusion. Germany was playing the diplomatic game shrewdly, but the publication of the correspondence has nipped the plot in the bud, although it makes the situation between the United States and Germany much more critical and serious, being almost a declaration of war, so contrary is it to all policies of international friendship and custom

THE Cunard liner, Laconia, which sailed from New York to Liverpool week before last with twenty-six Americans aboard, was torpedoed by a German submarine when near the end of her voyage. Ten American lives were lost. Two Chicago women, mother and daughter, died from exposure in the life boats after the sinking ship was left; while eight American members of the crew lost their lives in the disaster The Laconia belonged to the same British company as the Lusitania, which was sunk earlier in the war with heavy loss of life. The sinking of the Laconia, apparently without warning, looms up as the most serious disregard of American rights and international law since the present ruthless German submarine campaign began. The afternoon that the news came of the disaster President Wilson went before congress to ask authority to arm American merchant vessels and to use the forces of the United States to protect American ships and American lives on the high seas. The Laconia was evidently torpedoed twice, sinking within forty-five minutes after the first one struck her. Good order was maintained, but several of the life boats were swamped shortly after leaving the sinking ship and many of those who were saved suffered severely from exposure, while all lost practically all their effects. Much official and diplomatic mail went down with the liner, making the matter even more serious in a diplomatic and international way.

ON THE day after the liner Laconia was sunk, with the loss of ten American lives, President Wilson went before congress and asked for authority to place the United States in a state of "armed neutrality" to resist the German submarine menace. Continued invasion of the plain rights of neutrals on the high seas, further sacrifices of American lives and ships and the intolerable blockade of American commerce—almost, in fact, as effectual as if the country were at war—were held by the president to have taken the place of the dreaded "overt act" upon which he had promised to wait. When the details of the Laconia's sinking were afterwards received it was semi-officially stated that the "overt act" had indeed occurred. President Wilson realized that the situation was a grave one and congress heard him with solemnity. In the course of his address the president said: "It would be foolish to deny that the situation is fraught with the gravest possibilities and dangers. No thoughtful man can fail to see that the necessity for definite action may come at any time, if we are, in fact, and not in word merely, to defend our elementary rights as a neutral nation." He went on to ask permission "to supply our merchant ships with defensive arms, should that become necessary, and with the means of using them, and to employ any other instrumentalities or methods that may be necessary and adequate to protect our ships and our people in their legitimate and peaceful pursuits on the seas." The pacificists immediately announced that this demand meant war and that they would oppose it to the best of their abilities, Wm. J. Bryan telegraphing from Florida that he would go to Washington at once and fight the president's request.

BY THE decisive vote of 403 to thirteen, the lower house of congress last week passed a bill authorizing President Wilson to arm American merchant vessels in order to protect them on the high seas and to issue $100,000,000 worth of bonds for "the purpose of insuring vessels, their freight, passage moneys and cargoes against loss or damage by the present risks of war." Party lines were swept away at the last and only thirteen congressmen voted against the bill, nine republicans, three democrats and one socialist, as follows: Republicans: Benedict, of California; Carey, of Wisconsin; Cooper, of Wisconsin; Davis, of Minnesota; Helgesen, of North Dakota; Lindbergh, of Minnesota; Nelson, of Wisconsin; Stafford, of Wisconsin; Wilson, of Illinois. Democrats: Decker, of Missouri; Shackleford, of Missouri; Sherwood, of Ohio. Socialist, London, of New York. The bill, as adopted, does not suit the president, inasmuch as it cuts out the use of "other instrumentalities," which he requested in his message to congress. A bill in the senate provides for this and it is the one which the president and his supporters are backing. After weeks of delay and dilatory tactics congress settled down to business in the closing hours in a determined and patriotic manner, showing that the president has a united public sentiment behind him.

MERCHANT shipping aggregating 4,357,500 tons, belonging to entente and neutral nations has been destroyed or condemned as prizes by the central powers since the beginning of the war, it was officially announced in Berlin last week. Apparently this total covers a period up to the end of January, 1917, only, as no figures for February are given. The official statement reads: "During January last, 170 merchant ships of hostile powers with a total of 336,000 gross tons were destroyed as a result of the war measures of the central powers. Of them ninety-one vessels with an aggregate of 245,500 gross tons were British. Besides these fifty-eight neutral merchant ships, totaling 103,500 gross tons, were sunk on account of carrying contraband for the enemy The total loss in shipping for the month was 228 vessels with a total of 439,500 gross tons."

FEDERAL relief in the food situation was proposed in congress by Senator Borah, of Idaho, who introduced a resolution to appropriate $6,000,000 to be expended by the president in aiding local authorities to furnish food and clothing to persons now actually suffering. The resolution also would provide for an investigation of rising prices, their cause and methods of marketing and distributing necessities with a view to bettering these conditions and to determine whether the anti-trust laws have been violated. Continued improvement in the car shortage and congestion at eastern railroad yards was reported last week to the interstate commerce commission and the car service committee of the American Railway association. Continuation of mild weather in the East, it was said, would free thousands of cars now wedged in crowded yards.

A STEADY decrease since 1885 in the proportion of convicts in the United States employed in miscellaneous work under lease and contract and a marked increase in the proportion employed for the benefit of the state on highways and other public works are shown in statistics just published by the office of public roads and rural engineering of the United States Department of Agriculture. The most satisfactory use of the system, in the opinion of the department's road specialists, is under state rather than county administration. Since 1885, the report shows, the percentage of convicts in a large number of representative institutions working under the public account, state use, and public works and ways systems, has increased from 33 to 86 per cent, while the proportion engaged in road work alone has increased from 1.3 per cent to nearly 13 per cent. Convicts should not be indiscriminately put to work on roads, it is pointed out. Only those who are physically fit for the work should be employed. It may be even desirable and practicable in many instances to reserve assignment to the open-air work as a reward for good behavior.

The skillful dairyman does not follow the plan of feeding all his cows alike, but, on the other hand, he aims to apportion the grain in accordance with the amount of milk produced. A cow that yields thirty pounds of milk a day on a good ration ought to have ten pounds of grain daily. If she produces only twenty pounds of milk, six or seven pounds of grain is all that she can make use of economically.

Champion
Toledo

Dependable Spark Plugs

All Overland and Willys-Knight cars are factory equipped with Champion Dependable Spark Plugs.

For no other plug meets the needs of these motors so efficiently —so unfailingly.

Champions are most carefully and scientifically built. Their construction is guided by the most exhaustive laboratory tests.

Champion porcelains are protected against the constant hammering of the cylinder explosions by patented asbestos cushioned copper gaskets. The extremes of heat and cold do not weaken or crack them.

There is a Champion Spark Plug especially designed for every type of automobile, tractor and stationary gas engine.

The name "CHAMPION" is on the porcelain. Look for it.

Willys-Knight Cars

are equipped with the Champion Heavy Stone Plug.

Price, $1.25

JAKE the Champion Stump Puller

Clear Land FREE For 30 Days!

NEIGHBORS—land owners—men who are after profits from the soil—did you ever read the story of Jake the Stump Puller Champion? Jake is a winner. He is a land clearing expert. Perhaps you saw Jake along with the land clearing special train up your way last summer. We want to send you now our free book and also Jake's story. Jake has been in your state, clearing land there, meeting your kind of conditions. His story will make you grin, but it will make you sit up and think, too. Get it and read it.

Now is the time to think and the time to act. Our free book will show you how to clear the land. New cleared land—by the Hercules system—will pay for itself the first year. **Write today. Get the book.**

HERCULES TRIPLE POWER PORTABLE STUMP PULLER

Clear Your Land EASY and FAST

A New Record-Smashing Offer for YOU—NOW

First of all let us get down to hard brass tacks and learn facts. We don't want to tell you some boiled shirt theory about land clearing. **We want to tell you facts—things that are actually happening.**

For one thing we want to show you why Hercules is the king of all Stump Pullers and always has been king.

The Hercules was the first all-steel puller ever built. The first to introduce the grooved device that all others had to copy. The first to introduce the double safety catch. First real triple power puller. First and still the largest selling Portable Puller. **Get the book. Read our extraordinary proposition.** The Hercules is the puller that has the single, double and triple power features, giving you three machines in one. One man with a team can handle it and move it from place to place. No heavy lifting. It is the real One-Man Puller.

The new Portable is equipped with a solid steel bed-plate and broad, steel wheels. There isn't a land clearing job in the country but that can be done cheapest and quickest the Hercules Way.

It's the low-down constructed puller that has self-anchoring and stump-anchoring features—the one with double safety ratchets that insure the absolute safety of men and team. I want to send you a Hercules on

30 Days' Free Trial

so you can see how **powerful** it is and how **easy it works.** I want you to know for yourself that the all-steel construction means 60 per cent less weight and 400 per cent greater strength than cast-iron or "semi-steel." Besides that, I want to save you big money on the cost. I am making you a brand new offer now.

Unlimited Guarantee

I mean that. When you buy a Hercules I don't fuss or quibble with you. I make a signed and sealed guarantee to you that has no limit of time to it. I can do this because the Hercules is so extraordinarily strong and well built that no job is too tough for it. Write and see.

Bateman's New Special Reheat Treatment Steel in Every New HERCULES

Read about it in a special circular just issued. It has enabled us to make the broadest, most amazing guarantee ever heard of. Again Hercules has smashed all records.

Get My Special Offer Now

If I get one of my new Hercules Machines in each locality, **more will surely follow** because of Hercules quality and efficiency—that's my experience. So I can easily afford to sacrifice my profit on the **first** machine in each locality.

Take advantage of the big profit and big saving opportunity **now.**

Send for Free Book and Special Proposition That Explains My Unlimited Guarantee—This Free Book Tells All

Just simply send your name and address on the coupon or on a postal so I can send you the convincing facts about the superiority and efficiency and value of this wonderful new Hercules Stump Puller.

Only 1000 of these machines will be sold at this remarkable introductory price, so get your name in now.

My new book is a beauty. See the real pictures of big stumps it has pulled out like you would pull weeds.

Read the many interesting letters from farmers, lumbermen and land promoters. Stumps, stumps, stumps, pulled out quick, making fortunes for owners of Hercules Stump Pullers.

I want you to know the facts. Just mail coupon or postal **now.** I'll send the book and price by return mail. I'll tell you the best crops to raise on virgin land where stumps were before.

I simply want to get my free book to you at once, so that you can read what splendid work the Hercules All-Steel, Triple Power Stump Puller is doing. I want to start you right in the land clearing that means so much to you now.

Wisconsin Holstein Breeders Meet

Most Enthusiastic Session in Twenty-five Years Was Held Last Week at Manitowoc—Membership of the Association Is Growing.

THERE was more spirit behind the meeting of the Wisconsin State Holstein-Friesian Breeders' Association, held at Monroe February 28th and March 1st, than ever before in the twenty-five years of the existence of this body. The two days were chock-full of discussions for development and action during the coming year. Compared with preceding years the association is doing exceptionally well. Last year the total memberships numbered fifty-two. This year it is 270.

R. J. Shaefer, of Appleton, president of the association, in his annual address referred to the possibilities of the breeders with the Holstein. Records now on the books show that seventeen Holsteins have yielded over forty pounds of butter in seven days and twenty-four cows of this breed have surpassed the 1,200-pound butter mark in 365 days. The efficiency of the breed is not centered in a few individuals, but is in the pedigree and breeding of most of them. The problem is for the owner to develop these powers of production by intelligent feeding. He asked the members present to work for the interest of the state association and declared the showing made by the Wisconsin breeders at the last national meeting at Detroit was not representative of the strength of the breed in the state. Only twenty-nine members were present at the Detroit meeting, holding only 390 proxies. This year a campaign for a full showing will be made and when the delegate is sent to Massachusetts in June to the national meeting he will have a number of proxies more nearly like the membership total. Wisconsin is second in the number of Holsteins per state and has a total of over 3,000 owners of registered Holsteins. More than 1,250 are members of the national association.

During the business meeting there was one question of special importance and that was to secure the 1918 meeting of the national body, the Holstein-Friesian Association of America, for Wisconsin. The city of Milwaukee could offer excellent accommodations for such a gathering and a strong bid will be made by the delegate appointed by the state association to secure the privilege of being host of America's largest cattle association. Furthermore, Wisconsin wants a representative in the council of the national association and a strong effort will be made to land a place for one of her big men on the board of directors. All these plans require the support of every Holstein man in the state before there can be any talk of accomplishing them. The meeting pledged itself to go after this support and make Wisconsin leader of all other states. An opportunity is granted men not strictly owners of Holstein cattle to become members of the association by a change made in the constitution. Formerly only the owners could belong while under the amended laws the herdsmen and others who have much to do with Holsteins and Holstein interests can apply for membership. The constitution was also changed to provide for nine directors instead of three. The time of meeting under the adopted amendments is moved forward to the second Wednesday and Thursday in January. The idea here was to have the meeting early enough so that matters that might come up before the legislature could be threshed out previous to the meeting of the lawmakers and the matters of interest to Holstein breeders could be properly taken care of. After much debate a resolution was finally passed favoring the adoption of the 305-day test with the provision attached that no test shall be recognized unless the cow has been in calf for five months of the test and has delivered a healthy calf in fourteen months from the time of starting.

W. E. Skinner, Dr. O. H. Eliason and J. B. Newman brought out some vital points in their respective talks. Mr. Skinner is secretary of the National Dairy Council and has probably more data on hand concerning the combined dairy interests than anyone else. He led off by saying that the dairy industry is the most unorganized industry in the United States. Though the start has been made at a harmonious working for the good of all instead of the good of the individual, there is still too much inclination to make money by hurting the other man's business. As an example he quoted the case of the milk producers in a large city where recently the price was raised. With the announcement of the increase in the daily press went an interview with one of the officials of the producers saying that the dealers were to blame for the high prices and defending the association. He was ruining the confidence of the people in milk by saying this and hurting his own business. In line with this is what Mr. Skinner called negative advertising where one dealer tries to show the superiority of his product by calling the other man's product not prepared in the way the first dealer handles it an unsafe and unclean product. These things hurt the whole dairy industry. The Underwood amendment cutting the tax of 10 cents per pound for colored oleomargarine down to 2 cents was defeated through the timely protests of the dairy council. National advertising that is now being run by the council is bringing remarkable results. The funds for this campaign were collected by subscription from all the bodies interested in dairying and dairy products and by individual donations. For a furthering of the plans of the council much more will be necessary and the plan explained by Mr. Skinner of taxing all breeders on the basis of animals owned was favorably voted on by the Wisconsin Holstein men at the conclusion of the address. Fred Pabst, of Oconomowoc, gave Mr. Skinner a check for $1,000 toward keeping the good work going.

Dr. O. H. Eliason, state veterinarian of Wisconsin, gave one of the most sensible talks we have heard from a state veterinarian for a long while. He spoke on the relation of the state live stock sanitary board to the breeder. The doctor was raised on a farm and knows the sacrifices most breeders have to make before they can point with pride to their herd. He knows what it means to have all this wiped out by the tuberculin test. He is, therefore, not in favor of ruthless slaughter and it is largely through his influence that there is now a bill before the legislature which would make it possible for a breeder to utilize in part at least infected animals for the breeding of a new herd. This bill was discussed in The Wisconsin Farmer of February 22d.

J. B. Newman, of the extension service of the Holstein-Friesian Association of America, gave the purposes and the work the national body is doing in behalf of the Holstein. Out of 150 carloads of cattle recently placed into southern Illinois through the cooperation of the bankers of that state 148 were Holsteins. Requests for animals in the newer sections of the Southwest where dairying is just taking hold all go to show that the demand for the Holstein cow is forever on the increase. He referred to the Holstein as the "Wonder Cow." He urged very strongly the establishment of accredited herds where all animals have safely passed the tests and are regularly tested by competent veterinarians. The big market will be for the men or the district that can guarantee every animal on their place as free from disease without first testing.

At the election of officers the following men were re-elected: President, A. R. Shaefer, Appleton; secretary, C. J. Schroeder, Racine; treasurer, F. J. Bristol, Oakfield. For vice president Sid Bird, of South Byron, was elected.

33,000 sq. ft. of additional floor space

Come to Detroit
The Automobile Center and
LEARN THE AUTOMOBILE BUSINESS

DETROIT trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. 71% of Automobiles are made in Detroit. You're right in the Heart of the Auto Industry. Men are needed everywhere as testers, repair men, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Earn $75 to $300 a Month

We teach you to handle any auto proposition You graduate in from ten to twelve weeks. Our equipment is new, up-to-the-minute, and complete. No old, obsolete motors, chassis or electrical equipment used. Students actually build cars from start to finish, getting factory training in assembling, block-testing, road-testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting, separate from regular course. Learn to time motors, rebore cylinders, adjust carburetors, magnetos, valves and bearings, quickly and accurately. Six-cylinder Lozier, Chalmers "6," Detroiter "6," Overland, and 8-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3400-r. p. m. motor, the latest thing out, Willys Knight 1917 chassis, Saxon "6" 1917 chassis, Studebaker "6" 1917 chassis, Maxwell 1917 chassis, Hudson Super-Six 1917 chassis, Oldsmobile "8" 1917 chassis, Cole "8" 1917 chassis, Briscoe 1917 chassis, Detroit Electric 1917 chassis, Winton "6" chassis. All completely equipped for students to work on. We have more than 25 motors in our block-test department—2 cyl., 4 cyl., 6 cyl., 8 cyl. and 12 cyl. Our electrical department is complete, having every standard starting, lighting, and ignition system, including Delco System as used in Buick, Hudson, and Packard Twin "6."

Detroit Is the Place to Learn---Start Any Time

There are 44 auto factories in Detroit and 140 accessories and parts factories. Our students have the privilege of going through any or all of them. We now operate Westinghouse, Auto-Lite and Bijur Service Stations. This has added thousands of dollars' worth of equipment and makes our electrical department unequalled. Students get actual experience in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. Ours is the only Auto school having this equipment. Auto factories need Dynamometer men constantly. Factories and garages are paying big salaries to men who know how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. School open all the year. Enter classes any time, any day. Three classes daily, morning, afternoon, evening. All instructors are members of the Society of Automobile Engineers (S. A. E.). There is a great demand for Michigan State Auto School students. Auto factories write and phone for men constantly.

Money Back Guarantee

We guarantee to qualify you in a short time for a position as chauffeur, repair man, tester, demonstrator, garage man or automobile dealer paying from $75 to $300 monthly, or refund your money. We have constantly more requests for Michigan State Auto School Graduates than we can supply.

Follow the Crowd to the Michigan State Auto School—Come to Detroit.

This Is One of the 1916 Classes.

Additional Building and Equipment

Thousands of dollars' worth of new equipment, plenty of room for students to work at 687-89-91 Woodward Ave., in addition to our building at 11-19 Selden Ave. Our school has grown by leaps and bounds students come from all over the world. We are constantly adding new equipment. Our electrical department is thorough and complete.

Factory Co-Operation We have completed arrangements with the Auto factories to put them in touch with men who intend going into business for themselves. Men who know the auto business from A to Z are in biggest demand. Remember, the price of course is based on giving full value. Graduates in the complete auto course are competent to handle farm tractors.

Auto Factories Endorse Our School

The Leading Automobile factories in Detroit, as well as in other cities endorse our school. They have been watching our school and graduates for years and are satisfied. They are putting their latest model, complete chassis in our school for our students to work on. They are employing our graduates in their factories and service stations and assisting them in opening garages and salesrooms. They allow our students to go through their factories. They need trained, competent men and are asking for more of our graduates constantly.

The Michigan State Auto School in Detroit, Michigan, the heart of the Auto Industry, is endorsed by the Leading Auto Factories and receiving their hearty co-operation. What better endorsement could you ask?

Fruits and Garden

The Wholesome Cherry Tree.

We have in the sour cherry tree a valuable adjunct to the home in all the corn-belt country which is not justly appreciated. It is a hardy, easily grown tree, and fully pays for its place in the sun. Its crop of juicy fruit, when once enjoyed, will not be willingly neglected afterward. The ideal location for the farm cherry orchard is in the poultry yard. Not that we would turn trees and poultry loose there simultaneously, but give the trees three years the start and then let the chickens run "ad libitum" and no harm will result.

First, cost of the trees is not excessive. Four or five dollars will pay for a dozen good, first-class trees of the best northern sorts. Do not be persuaded to buy the sweet cherries in this northern latitude. They have invariably proved unprofitable for general purposes. The trees are poor bearers and of short life with us.

In the poultry yard this fruit furnishes just the shade which the fowls need; and they need for food the bugs and worms which pester the cherry. The curculio beetle—one of the worst insect pests—hibernates in some surface shelter and crawls up the trees to deposit eggs in the warm May days. Then the sharp-eyed chickens get in their useful work. They beat the swallows by swallowing the beetles.

The cherry is adapted to all soils which have a heavy clay subsoil. Loose, sandy soils do not suit them, and when planted on such soils they are so unhappy that they speedily commit suicide.

When the cherry and the Leghorn or the Plymouth Rock cohabit, no spraying is required for the trees, and less feed will be needed for the chicks. They will not only eat all the worms and bugs, but they will cheerfully gather all fruit which comes in their way along dependent branches. If the grower should be too busy, or too indolent to pick the fruit left in the top of the trees, the fact need not worry you, for the birds of the air will quickly remove it. The robins are specially fond of this fruit, and will often saucily assert his rights in defiance of arbitrary man.

If you are short of room, fifteen feet apart will accommodate the cherry for many years. The trees do not need as much pruning as most other fruit trees, being rather conservative in their manner of growth. Trim when young to give the top a symmetrical shape. Cultivation also is needed when the trees are small, for a thrifty, early growth means early fruitfulness and long life.

An Old Strawberry Question.

The following communication has been received from a subscriber:

Am planning to set out my first strawberry bed. I have got three or four catalogs and find that the plants will cost me from 50 cents to $1 for a hundred. And then I have to pay the express. But I have a friend who has berries and they have done well for four years, and they are big ones. She tells me I can come there and dig all the plants I want for nothing. My husband says they won't be first class, but I don't see why. What do you think?

We think that this subscriber's husband is entirely right in thinking that plants from the old bed will not be first class. The requirements for a good strawberry plant are that it should be grown from runners sent out the previous season. It should be of good size, vigorous and have long, white roots. Such plants only grow in soil which is well cultivated. An old bed which has been in fruit for three or four years is not likely to have such plants. In fact, it is very certain not to have them.

If you can find plants there which are strong, thrifty and have white roots they might answer your purpose. But you will find that the most of the plants which you dig there will be two years or more old. Age will be shown by the hard, black and wirey roots. All such plants are worthless from the fact that they will not grow again. Transplanting is fatal to them, as they have very little vitality.

If you use such plants you will surely have only disappointment for your labor.

But if you can find a neighbor who set out a bed last spring and now has a matted row of young plants of 1916 growth, those plants will be valuable and it will be just as well for you to buy of him as to send to some distant grower, always supposing that your neighbor has a good variety.

Generally speaking, it is a poor plan to try to save money at this point. It will pay to get a good article to start with. And the purchase price will not be money thrown away, because if you get a valuable variety and succeed in growing a large number of plants you can sell to some of your neighbors the following spring. Dollars well spent come back and bring their friends with them.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 18.

BIG FUTURES FOR TRAINED Auto Experts

Mr. Wm. Arheiger. He has turned out more auto experts than any other man in the west.

Your future—what will it be? Long hours of hard work every day or short hours with good pay? Decide now to become an auto expert. The auto business is easy to learn, pays good money, is here to stay and growing bigger every day. Learn it the practical way at the

Fond du Lac Farmers' Meeting.

Farm Management Contestants and Members of Breeders' Associations Hold Meet With Experiment Order.

THE Fond du Lac County Order of the Wisconsin Agricultural Experiment Association held their tenth annual meeting in connection with Jersey, Guernsey and Holstein breeders' associations at Fond du Lac on February 22d 23d.

Prof. E R. Jones, of the college, gave a talk on drainage. He commented on the advantage of drainage in improving land and increasing crops. Low land and marsh land is of enough importance in this state to warrant a special study and the college authorities have done considerable work on the question of farm and marsh drainage. By combination of the tile system with the open ditch outlet these lands can be made to yield profitable crops under proper management. Draining only part of the farm at first is the best way of getting at the successful solution of this problem according to Professor Jones. Especial attention was called to having ditches and tiles not at the proper level and causing an unsatisfactory flow of water. The question of draining land higher than the adjoining property was then taken up and discussed quite in detail. There is considerable damage possible to the low land by improper systems. The tile system works in a different manner than the ordinary outlet ditch in that it enables an area to absorb the excess water similar to a sponge and releases it for the lowlands in a gradual manner, instead of all at once. The open ditch method and its proper construction were given some consideration and Professor Jones advised giving the sides the proper slope to prevent caving in and filling up of the ditch, which would seriously affect the usefulness of the ditch. Mr. Jones also took up the laws that pertain to the installation of drainage systems on marsh lands.

Prof. R. A. Moore gave an address on the rotation of crops. Less than a generation ago, according to Professor Moore, the one-crop system was fast depleting the nourishment of the Wisconsin farm soils. Tracing the development of rotating crops from that day on to this he showed that the benefit had been as predicted. He took up in his discussion two-year, three-year, four-year and five-year rotations. The objections to the two year plan are that clover and oats or barley alternated do not allow for enough time to elapse before the clover must be turned under again. The three-year plan of clover, small grains and corn is more satisfactory and also the four-year plan where corn is planted on sod land the first year followed by small grain and then seeded down to clover, which would be the crop of the third year, followed by timothy. In the five-year plan which provides pasture for stock the rotation would be corn, small grain, clover, mixed hay, which should be allowed to be pastured in the final year of the rotation. Potatoes and root crops could be substituted for corn or any part of the corn acreage.

The announcement of the completion of the farm management records and the return of the books which had been kept by thirty farmers of Fond du Lac county was made by Professor Otis in his talk on "Farm Records." The interest here centered around the comparisons of the standard cost system as applied in determining the actual cost on the individual farm operations. This, however, is described in detail in another issue.—Professor Otis urged the farmers to work in closer harmony with the bankers, as the banker can profitably be made a partner of any farm establishment. Under the system of cost accounting it is easily possible to show on which operation the farmer has profited and on which he has not. With the figures to prove the success of any one line of endeavor the farmer can reason with the banker in a more businesslike way and he will have less trouble in inducing the banker to loan money for operations which have in the past proved to be profitable. Where 10 and 12 per cent is made on an investment it is plain that a larger investment would insure larger profits.

The meeting on Friday included talks by Prof. J. L. Tormey, who spoke on "Feeds" and feeding of live stock. Professor Tormey pointed out some interesting facts in connection with high cost of feed. On comparison with four rations which had been computed some four years ago it was found that the same rations today would not run much over 4 cents per pound more. Prices four years ago were evidently also very high, as the cost of the rations today was figured on the prices prevailing on the local market this month. Professor Tormey advocated buying such feeds as would give the protein and carbohydrate requirements at the lowest possible cost.

In the afternoon the meeting of the breed associations were held and in the Jersey association no new elections were made because of the absence of a considerable number of the members. The Holstein association elected S. H. Bird, of South Farm, president; Carl Brugger, of Fond du Lac, secretary, and Clarence Corcoran, of Fond du Lac, treasurer. The Guernsey breeders elected B. F. Sheridan, of Fond du Lac, president; George I. Berne, of Oakfield, vice president, and F. M. Ingalls, of Fond du Lac, treasurer. The Guernsey breeders elected as an executive committee for the county association the following men: Matt Michels, A. W Hargrave, B. F. Sheridan, F. M. Ingalls. The Guernsey breeders presented Mr. Ingalls with a gold watch as an appreciation of the efforts in behalf of the Guernsey and better dairying.

Charles L. Hill, of Rosendale, spoke to the members on herd production and pointed to the essentials of increasing the yield from dairy cows.

On each day a banquet was served to the members and friends of the association at the Elving Hotel, where ideas were exchanged and good fellowship promoted.

Album of the 1916 International.

A profusely illustrated cloth-bound history of the 1916 International Exposition will be ready for delivery in the near future, according to a statement recently made by B. H. Heide, manager of that great exposition. A nominal price of 50 cents per volume has been fixed, though this is considerably below the actual cost. It has been thought wise to preserve the great 1916 show in this way in order that stockmen who are interested in the improvement of farm animals may come into possession of the record in permanent form. Those who are interested should apply to B. H. Heide, manager International Exposition, Union Stockyards, Chicago, for a copy.

Successful swine breeders invariably feed their sows liberally before farrowing time. It is well to cut down a little the last day, but it is a great mistake to feed lightly for a week or two in advance of farrowing time and then to start in and feed heavily soon after farrowing. This is sure to cause the young pigs to scour and if the weather is cool there will likely be a heavy loss.

There are almost 60,000 silos in Wisconsin. One farmer in three living on a farm twenty acres or larger has a silo.

JOHN DEERE IMPLEMENTS

BOOK FREE 156 page reference book—tells all about a complete line of farm implements and how to adjust and use many of them. A practical encyclopedia of farm implements. Worth dollars.

Describes and illustrates Plows for Tractors; Walking and Riding Plows; Disc Plows; Cultivators; Spring Tooth and Spike Tooth Harrows; Disc Harrows; Alfalfa and Beet Tools; Farm and Mountain Wagons; Manure Spreaders; Inside Cup and Portable Grain Elevators; Corn Shellers; Hay Loaders; Stackers; Rakes; Mowers and Side Delivery Rakes; Hay Presses; Kaffir Headers; Grain Drills; Seeders; Grain and Corn Binders.

This book will be sent free to everyone stating what implements he is interested in and asking for Package No. X-64.

JOHN DEERE, MOLINE, ILL.

John Deere Spreader

The Spreader with the Beater on the Axle

Mounting the beater on the axle simplified the construction, eliminated troublesome parts and made possible a successful low-down spreader with big drive wheels. There are no shafts to get out of line, no chains to cause trouble, and no clutches to adjust. The only spreader with beater and beater drive mounted on axle.

Low down, with big drive wheels out of the way. Easy to load.

Revolving rake, driven by manure moving toward the beater—no bunching of manure. Ball bearing eccentric apron drive—a new and exclusive driving device. Makes uniform spreading certain.

Wide spread attachment for spreading seven feet wide can be furnished for the John Deere Spreader. No chains nor gears. Quickly removed.

Syracuse Chilled Plows—General Purpose Series

Syracuse Plows have an enviable field record among farmers in chilled or combination plow territory.

Syracuse Chilled Plows—General Purpose Series are unsurpassed for use in hard, dry ground, gravelly soils or stony fields where plows ordinarily will not stay in the ground—unusually well balanced.

Long moldboard of good turn and scouring qualities.

Detachable chilled iron, keen edge shin piece. Cutting edge of moldboard can be renewed easily, quickly, and at small expense. Not necessary to renew entire moldboard each time.

Right and left hand styles.

Here is a feature that is appreciated by the man who buys a Syracuse Plow. Extras ordered will be duplicates of the original parts. Bolt holes will be in the right place. Every part will fit. In fact all necessary parts that go into a Syracuse Plow could be ordered as repairs and when received built into a complete plow. Extra parts are exact duplicates—no trouble results.

Remember, Syracuse quality is uniform.

New Deere Light Draft Gang Plow

For twenty years the New Deere Gang has had the good opinion of enough farmers to make it the one best seller—

And, today, it is the same plow it was twenty years ago, with the usual minor refinements added.

Correct in design, always representing the highest development of the plow-maker's art; the New Deere Gang is a leader; and has been every single year for twenty years.

Go to your John Deere dealer's and look this plow over—you will readily see why it is such a popular plow.

The New Deere Gang is the most widely used plow of its type.

It is light draft, durable and is equipped with John Deere bottoms, known all over the world for superior work, easy scouring and light pulling qualities. It cuts and turns full width of furrow.

A simple, practical foot lift and auxiliary hand lift lever—easy to raise bottoms out of the ground.

John Deere Quick Detachable Shares—great labor and time savers. Share can be taken off easily, only one nut to remove.

John Deere Model "B" Disc Harrow

Using a disc harrow before plowing pulverizes surface lumps; works trash into the seed bed and prevents the escape of moisture. Then when the furrow slice is turned, the trash decays rapidly and no large air spaces are left between bottom of furrow and the turned furrow slice. Water in the subsoil can make its way into the seed bed and plant roots can penetrate to deeper soils.

Discing after plowing removes the weeds, and makes the seed bed compact, but not hard. The discs break up lumps of soil.

The Model "B" pulverizes at even depth its entire width.

Patented spring pressure third lever—inner ends of gangs can be given light or heavy pressure to disc over ridges or cut out dead furrows without burying the harrow.

Independent gangs. All tendency of gangs to crowd to one side is easily overcome by giving them the proper relative angle.

Flexible—only that part of the Model "B" harrow passing over an obstruction is lifted out of the ground.

Rear section can be furnished to make a double action harrow.

JOHN DEERE, MOLINE, ILLINOIS

Treat All Seeds

—take no chances. Anyone can apply Formaldehyde. It is endorsed by the U. S. Dept. of Agriculture as *the* standard treatment for seed grain smuts, potato scab and black-leg.

FORMALDEHYDE
The Farmer's Friend

To insure a full yield you must destroy all forms of smuts, rust and fungus growth. Our Formaldehyde sold by your dealer for 35 cents treats 40 bushels of seed. New hand book just issued — *free.*

PERTH AMBOY CHEMICAL WORKS
100 William Street New York

"FARM-WEAR" SHOES for FARM WEAR

"BETTER LOOKS AND MORE MILEAGE"

Question: "What rots shoe leather?"
Answer: "Uric Acid."
Q.: "What causes Uric Acid?"
A.: "Sweaty feet and barnyard service."
But Uric Acid can't harm Farm-Wear Shoes because the leather is double tanned. This makes the shoes wear twice as long as ordinary shoes. Also Farm-Wear Shoes are made especially for farm service. They are better looking and better fitting than other work shoes. Farm-Wear Shoes for men and boys, 6 in., 8 in., 12 in. and 16 in. high, will settle your shoe problem for all time.

Helps For Farm Women.

Some Facts Concerning the Work Which Wisconsin Is Attempting to Do For Women of the Farms of This Great State.

CLASS OF FARM WOMEN LISTENING TO LECTURE ON DIETETICS

THE farm women of Wisconsin have not been neglected in the program of education and assistance that our great state laid out for the advancement of agriculture and embodied in the great institution, the college of agriculture. The women have the same opportunity of learning how to bring their labor to a larger stage of productive ness by modern methods as the men have. Courses and institutes for women parallel those for men. Like for the men and their field operations there are divisions of education for the women covering every phase of the household activities. For the men the departments have been builded and planned according to the increasing interest. For the women a similar interest in the future will also obtain still bigger and ever more efficient forces of instruction.

The responsibility and the development of farm education has been wisely concentrated in the department of home economics. Under the care of Miss Abby L. Marlatt, the director, each course of instruction is given the closest attention. Miss Marlatt is constantly striving—and succeeding—to bring the women of the farm to a greater realization of their importance and usefulness as homemakers. It should be the privilege of the wife to enjoy the best of everything in the way of labor-saving appliances. Unceasing effort is put forth in the home economics laboratories to discover the better things in cookery and sewing. New methods in house decorations and efficient means of household management are tried out by this department. Every angle of housework is under constant study in order that the results can some day be given to the women of the farm for the lessening of their labors and the preservation of their health.

The courses of education for women in the home economics work are divided into credit and non-credit courses. The first refers to regular school work and corresponds to the four-year courses in agriculture. The courses available are open only to students with high school credits and are attended by girls from both the farm and the city.

The non-credit courses are the short courses for the women and they constitute the big thing in home improvement. Results from these courses are direct. They include all subjects vital to the housewife.

Each year a woman's short course is held at Madison during Farmers' Week. A survey of the program shows that in the short period of instruction is crowded a wealth of information for the improvement of the home. Each morning the day is begun with a round-table discussion. The subject on the first might be the baby's health, the next short cuts in serving and so on, covering the most important subjects. Then follow the lectures on household management, on home decorations, child welfare, on planning meals. Demonstrations of new methods accompany each subject. Thus the women can obtain the fundamentals of a great variety of new practices and adapt the new method to their conditions when they return home.

The facilities for instruction include two food laboratories, two applied chemistry laboratories, one dietetic kitchen with a practice kitchen and dining room adjoining, one weaving laboratory, a textile laboratory, a dressmaking laboratory, a house architecture and home decoration laboratory, and one applied arts laboratory. Besides these there is a practice cottage which contains the modern ideas in household arrangement. It contains a living room, library, dining room, kitchen, laundry, three bedrooms and a bath. This cottage is not a model farmhouse, but includes in the main the features that ought to be possible in a majority of farm homes. The kitchen in this cottage is 10x9 feet and designed for the needs of a family of four. It is extremely practical. Its size does not make it hot or uncomfortable, as ventilation

(Continued on page 28)

A GREAT MANY STEPS MAY BE SAVED BY A KITCHEN ARRANGED LIKE THIS.

OTTAWA LATEST DESIGN

Durable, Powerful, Reliable, Massive. Built to last; to do hard, heavy work. Uses Cheapest Fuel. Pull ¼ to ½ horse-power more than rated. *3 Months Trial. Easy Terms.* Sizes 1½ to 22 H-P. Easy to start. No Cranking. No batteries. 10 Year Guarantee. Most practical engine ever built. Engine book free. A Postal brings it.

THE OTTAWA MANUFACTURING CO., 1191 King Street, OTTAWA, KANSAS.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments Diagnosed and Remedies Suggested in this Department.

Questions and Answers.

The Five-Horse Evener.

In your issue of February 1st you give an illustration of a five-horse evener that I desire to make. You did not give the length of the pieces of strap iron marked S and L. Does the long way of the boiler plate A go parallel with the plow?

Answer.—The length of these straps will depend upon the arrangement of your plow. We suggest that you make all three straps about twenty inches long, drilling the holes one inch from each end. Straps SS will have to be bent so as to form a fork to straddle the doubletree, R. The long way of the plate should be parallel with the plow, that is, the clevis is on the narrow end of the plate. The plate should be about three-eights of an inch thick.

Molding Brass.

What process is necessary to mold brass, and what heat is necessary to melt it? Can brass be formed on the anvil the same as other metals?

Answer.—Brass is usually melted in a clay crucible in a special furnace, although it is possible to heat the crucible in an ordinary blacksmith's forge. It melts at a temperature between 1,700 and 1,900 degrees Fahrenheit, the melting temperature depending upon the composition of the alloy. Brass cannot be worked on the anvil, as it is more brittle when hot than when cold. To form brass it is necessary to make a pattern the shape of the desired part, mold it in a box of sand and pour the molten brass into the mold. Your book dealer can supply you with books on molding and pattern making; also on casting brasses and bronzes.

Igniter Trouble.

I have a two-horse-power gas engine with make-and-break ignition. It will not spark at the points, although I have a good battery of eight cells, and a coil that throws a good spark when I snap the wires. What is the cause, and how can I fix it?

Answer.—Your trouble may be due to a poor connection or a loose wire. Corroded or worn-out contact points would cause the same trouble. Examine the wiring, scrape it bright and see that it is firmly clamped at each binding post. Be sure that none of the wires are broken. See that the insulation around the insulated terminal of the igniter is clean and in good condition. If the contact points of the igniter are worn out send to the factory for new ones. If they are not badly worn scrape them bright, file them with a fine file to a good fit and see that they work properly without sticking. Test the wires at the switch to make sure that the current reaches the igniter. The switch might be defective.

Testing a Boiler—Soldering Aluminum.

Can you tell me what is the proper way to test a traction engine boiler? On one engine here, they filled it with cold water and then connected a force pump to it and pumped it up to a pressure of 100 pounds. The steam pressure carried was 130 pounds. Was the test sufficient? Please also tell me how to solder aluminum.

Answer.—While the boiler is empty go over it with a hammer, tapping it and noticing the sound. Thin places in the plates may often be located in this manner. If this test does not show any weak places, fill the boiler nearly full of cold water and build a light fire in it, preferably of wood, and heat the water until it is warm, but not boiling hot. Withdraw the fire and go over the boiler with a straightedge, noting where the plates are flat and where and how much they are bulged. Then attach a force pump to the boiler and pump in enough water to raise the pressure about one-fifth higher than the working pressure. If your working pressure is about 125 pounds the boiler should be tested at 150 pounds. Too great a pressure should not be used, as it will strain the plates. While the boiler is under pressure go over the plates again with a straightedge and see whether the pressure produces any serious bulges. Also look for defective stay bolts

A special solder must be used for soldering aluminum. Ordinary solder will not work. Aluminum solder is an aluminum alloy. It may usually be purchased at a garage. The edges to be soldered should be heated to the melting point, and, while slightly melted, rubbed with a file or piece of steel until "tinned," keeping the flame of the blow torch playing on the parts to retain the heat during the tinning process. Have ready some of the aluminum solder, melted just enough to be mushy, and apply it to the tinned edges of the parts to be soldered, the edges being kept at almost the melting point. A case knife is a handy tool for applying the solder and smoothing it. Considerable skill is necessary for successful aluminum soldering, but if you follow the above instructions carefully you will soon learn to make a good job.

Heider
Made and Sold by
Rock Island Plow Co.

Save Money With This All Purpose Farm Tractor

Heider friction transmission means fewer gears, which means less trouble, easier operation and lower cost of upkeep. Tested by 9 years actual field work.

"The Heider I bought in March, 1911, has been in use winter and summer ever since. It is in good working order today. Does all kinds of farm work."—*William Korrect.*

We have hundreds of letters from Heider owners. They all prove beyond question that the Heider is the **Most Profitable Investment on Any Farm.**

Heider Model C 12-20 for medium or large farms, and Heider Model D 9-16 for smaller farms mean *ample* power for your harvest and tillage tools, and *economical* power for your stationary machinery—down even to the cream separator. Runs just as well on low priced kerosene as gasoline. Famous Heider Friction Drive easiest to operate, least expensive. 7 speeds forward and 7 speeds reverse. Gears enclosed in oil-tight dust-proof case. Get the facts. Write at once for new Heider catalog. Postal brings it.

ROCK ISLAND PLOW CO. 417 Second Av. Rock Island, Ill.

Also manufacturers of the famous line of Rock Island Farm Implements. Send for catalog.

ONE FRIEND TELLS ANOTHER WHY W-B CUT TOBACCO IS BEST AND CHEAPEST

HERE'S something curious about W-B CUT Chewing—it takes less out of your pocket and puts a better chew into your mouth. No big plug sagging your pocket, no big wad sagging your cheek. Half as much of this *rich* tobocco goes twice as far as ordinary plug. W-B saves your *silver* and gives you a silver-lining feeling of happiness all over. You can't help from telling your friends about W-B.

Made by WEYMAN-BRUTON COMPANY, 50 Union Square, New York City

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before you buy a manure spreader (gasoline engine, cream separator or tractor) of any make, or kind, or price, first get Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer manure spreaders, engines, separators direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a manure spreader or any of the other Galloway lines until you first get our prices and our proposition. Get my prices before you buy!

UNDENIABLE PROOF!

I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125.
Geo. A. Kralik, Okla City, Oklo.

I consider it equal to a prominent machine sold for $140. One neighbor who has used both says he would rather have the Galloway. W. O. Crecraft, Eckley, Colo.

I saved $39. Believe I got a better spreader than was offered me here for $135.
A T Miller, Orella, Neb.

It is as good a spreader as money can buy. I kept $85.43 in my own pocket. A team that weighs 1,850 lbs. pulls it easily.
W. H. Adams, Pound, Wis.

THE WM. GALLOWAY CO., 80 Galloway Sta., Waterloo, Iowa

STOP! LISTEN! 80-acre improved farm, $850; terms; [illegible], McGrath, Mountain View, Mo.

In And Around Wisconsin.

At the recent annual convention of the Milk Producers' Association, held in the La Salle Hotel, Chicago, resolutions were adopted along the following lines:

That a trademark be adopted which would identify the products of members of the association.

Opposing any mixture, such as "butterine," and permitting it to be sold as butter, and also opposing the reduction of the tax on oleomargarine.

Reaffirming former resolutions opposing the tuberculin test.

That the members of the association will not sell or deliver milk to any company or station which receives milk from non-members of the association.

The Wisconsin Farmer is advised that there were thirty-five or forty people present at the recent hemp meeting at Waterloo. Mr. A. H. Wright, of the Wisconsin College of Agriculture, agronomy division, gave a talk and presented Mr. A. M. Sheley, of Chicago, who made a proposition to contract for acreage, agreeing to buy all the hemp stalks, and in this manner relieve the farmers of the uncertainty of getting machinery to break hemp. While a number of farmers were interested, they regarded the raising of hemp as something of an experiment. Mr. Sheley wanted 300 acres contracted for to warrant the building of a breaking plant. Those who attended the meeting did not sign up for sufficient acreage, but it is believed that about 250 acres will be pledged. Mr. Sheley agreed to furnish seed at $6.50 per bushel, to be paid for when the hemp is delivered. The farmer is to furnish the land, plant and grow the crop, ret it, and deliver it to central stacks, and receive payment upon delivery. Mr. Sheley offered $15 per ton for the stalks on delivery. The price, according to Mr. Wright, is a little low, but was the best proposition which could be secured, and it provided an opportunity for farmers who desired to try the experiment of hemp raising.

A change of some importance has been made in the state fair premium list on grains and potatoes. The new list has recently been sent out to interested farmers by E. L. Luther, superintendent of farmers' institutes in this state. It includes good prizes for Rural New Yorker and Green Mountain potatoes, being a total of $78 in cash for these varieties alone. Wisconsin pedigree oats No. 1 and No. 5 carry five prizes amounting to $30, and Wisconsin pedigree rye and barley each carry eight prizes, the total value of which is $72. A total of $332 is offered in sixty different premiums on corn, including fourteen different varieties. All are some recognized type grown in this state and favorable for conditions in this state. All corn entries in the fifty-ear lot, of which there are eight varieties listed, must be selected from the 1916 crop. The revision of the premium lists on grains and potatoes is a result of the efforts of Secretary of Agriculture Norgord, to hook up the work of the agricultural department and the state fair with that of the college of agriculture. In the past the college of agriculture experimenters have been urging certain varieties for which no premium was offered at the state fair. This has not been true on corn for some years, but it has been true on some of the other grains and potatoes.

The Banker-Farmer Conference, to be held at Madison March 13th-14th, offers a program complete and interesting. Mr. J. R. Wheeler, of Columbus, president of the Wisconsin Bankers' Association, will be chairman of the meeting to be held at the stock pavilion Tuesday morning, March 13th. Dr. A. S. Alexander, J. G. Fuller and R. E. Vaughn will be the speakers at this session. There will be a box luncheon at 12:30. The afternoon session will be held in the main hall at the agricultural college, and H. J. Maxwell, of Princeton, a member of the agricultural committee of the Wisconsin Bankers' Association, will preside. This session will be devoted to discussion of alfalfa, hog cholera and general live stock topics, and the speakers will be R. A. Moore, L. F. Graber, F. D. Hadley and others. Admission tickets will be provided in the evening to Madison's annual show at the live stock pavilion. Mr. Geo. D. Bartlett, of Milwaukee, secretary of the Wisconsin Bankers' Association, will preside at the morning session, Wednesday, March 14th. The speakers will be Dean H. L. Russell, D. H. Otis, W. J. Geib, C. G. Humphrey and others. On Wednesday afternoon the delegates to this conference will take a trip through the state buildings at Madison. Any delegate who desires information on any particular topic will have an opportunity to confer with some department which will undertake to meet his requirements.

Wisconsin winters prevent leaching of the fertility of the land and render available a greater amount of plant food than in soil not subject to freezing.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. The rate is six cents per word, each insertion. Note the low cost to reach our 90,000 circulation.

FARM LANDS.

NORTH Dakota in all essentials—soil climate, crops, people, is a second Iowa. Because of heat, wet and rust the 1916 grain crop of North Dakota was short, yet government reports show $167,544,000 or $2,255 per average farmer. In last 7 years average farmer in North Dakota produced $1975 worth of crops; in South Dakota, $1,639; Iowa, $1,631; Illinois, $1,437; Minnesota, $1,396; Wisconsin, $901. Now is time to get North Dakota land, while price is low. No commission to pay. Great opportunities open. Write for our direct dealing plan, booklets, maps, etc. J. S. Murphy, immigration agent, Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minn.

GET a farm home in rich corn and clover belt of Northwestern Wisconsin along new Soo Line, 50 miles St. Paul-Minneapolis. Landseekers all say: "I saw nothing better." You'll like this wonderfully prosperous stock and dairy region too. Rich soils, hardwood timber, plenty rainfall, healthful climate, beautiful lakes, fine schools. Creameries everywhere. $15 per acre and up. Map and list free. Bak 1 N-110, St. Croix Falls Wis.

FARMS bought, sold and exchanged. No matter where located I bring buyers and sellers together. If you want to Buy, Sell or Trade any kind of business or property anywhere at any price, write me. Established 1881. Bank references. Address Frank P. Cleveland, Real Estate Expert, 1605 Adams Express Bldg., Chicago.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Breeding Buff Plymouth Rocks.

The following communication has been received from one of our subscribers, Mrs. L. W. Kreischer:

I am a regular reader of The Wisconsin Farmer and read the article entitled "A Few Don'ts and Whys of Mating." I am very much interested in the poultry business and advertise through the columns of The Wisconsin Farmer. I raise the pure-bred Buff Plymouth Rocks and am trying to get them as near standard as possible. Some of my birds are entirely buff and some have smoky tail feathers. How can I overcome this defect? I want to breed pure buff in color. I wish to know how to mate them so as to produce an even buff color throughout, with no mealy or smoky feathers. I had a few last year that had some mealy feathers. Now if I mate a cockerel of good, even buff color that has no smoky tail feathers with hens of good color, but which have some smoky tail feathers, will the chickens of this mating be pure buff or will they have smoky tail feathers?

Would it be desirable to mate the dark buff pullet with the light buff cockerel? Also, the light buff pullet with the deeper buff cockerel? Would the chickens of such matings be of the right good buff color? Or would it be more desirable to mate light color with light, and dark with dark? Will be pleased to receive any information you can give me on matings.

If I should mate a cockerel of good color (buff) but of rather small bone with large hens, would the chickens be large bone or would they be of light bone like their sire?

These remarks will apply to all buff varieties. We note that you have considerable trouble in keeping bronze or smoky tails from showing up too frequently. This is the most noticeable defect that breeders of buff varieties have to contend with, and naturally it is one that is somewhat hard to overcome. Our experience has been that it is very hard to get very much improvement from breeding from birds that have smoky or blackish tails. Our advice would be to select as many females from the flock as possible that show the least smokiness in tail and are of a good, even buff in all sections (not dark) and mate these with males that are perfectly free from the bronze tails, and of a nice, even shade of color throughout. Keep this mating in a nice, large yard and use their eggs only for hatching. If the males are yearling cock birds it would be all the better. If possible, it is always better to mate pullets with a good, vigorous cock bird. It is likely that females that have smoky tails, even though mated with a male that is clean, would produce a large percentage of chicks with the same defect.

You should mate the dark pullets you speak of with a light-colored cock bird that is of even shade. The light buff pullets should not be mated with any but a rich golden buff male. The correct shade of buff is a light golden, so take care not to mate dark, as that influences the smoky tails.

Regarding the mating of the good-colored cockerel which has light bone, will say that he should be mated with hens that are very large and heavy boned, and it is our opinion that the larger percentage of the chicks will be reasonably heavy boned, being so influenced by the stronger of their parents, the hen.

We occasionally see buffs with some white in their tails. Always throw them out of the flock, as it is even harder to overcome than smokiness.

You will realize that it is hard to advise how to mate without seeing or having an accurate description of the birds to be mated. However, much improvement can be made by taking care not to breed from birds that are seriously deficient in any section. Careful selection of the breeders is not to be slighted.

The Implement Blue Book Free.

THE Midland Publishing Co., St. Louis, Mo., has left over a few copies of the 1916 Implement Blue Book, one of which it offers to mail free of charge to any subscriber of this paper who will send 25 cents to pay the packing, postage, etc. The book has nearly 500 royal octavo pages and contains complete classified descriptive lists of all farming implements, tractors, tractor plows, vehicles, wagons, and kindred goods made in the United States, with names and addresses of manufacturers. —Adv.

Ironclad TRADE MARK
Wins in the Two BIGGEST HATCHING Contests Ever Held
Why take chances with untried machines when for only $11 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an IRONCLAD — the incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With the Ironclad — the same machine we offer with Brooder freight, paid for only $11, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.
30 Days Free Trial
Money Back if not Satisfied
150 EGG ironclads are not covered with cheap, thin metal and painted like some do, to cover up poor quality of material. Ironclads are shipped in the natural color — you can see exactly what you are getting. Don't class this galvanized iron covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery — hot water top heat, copper tanks and boilers, self regulator, Tycos Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write TODAY or order direct from this advertisement.

Planning and Equipping the Farm Home.

Building, decorating and equipping a home calls for a deal of planning, foresight and ingenuity. Knowledge of how to use the available materials and how to handle the supply of money to obtain the maximum of comfort, beauty and convenience is the main factor. Many an old farmhouse has been "done over" along strictly modern lines at an expenditure of only a fraction of what a new one would cost, but it takes thought and time.

Whether it is to be a new house or a remodeled old one, the housewife should do her share of the planning, for this is her workshop, and who knows better than she the arrangement that will suit her best? What man would permit another totally unfamiliar with his business operations to map out his work for him, build his shop and supply his tools without consulting him?

The home should be as beautiful, as sanitary, as time and labor-saving as is possible to make it. A sunny, airy, well-arranged house will furnish the basis for a true home. Don't sacrifice a window for wall space—furniture can always be made to fit a room, if not one kind then another, and if the room is right then the furniture that fits it will be right also. If a door can be cut to save steps, put the door in; rarely will it mar the appearance of the room. Of course, there must be system in the planning of a new house or the making over of an old one. Things done in a haphazard manner will not bring satisfaction, but sensible changes may oftentimes be made, thereby adding to the comfort of living.

Once the house itself has been made to conform to one's needs, the furnishing and decorating is the next step, and to the home lover this is a joy. The selection of paper or other wall decorations, the making and hanging of curtains and draperies, the choosing of carpets and rugs, the arranging of pictures and furniture only means the working out of one's ideals in homemaking. Harmony, convenience and comfort are the essentials. The ideal home is the home where each room, through color, decoration and furnishings, exerts a peaceful, restful influence on the occupants.

Furniture should be chosen with due regard to the environment in which it is placed. For instance, one might choose a beautiful piece of furniture and yet place it in unsuitable surroundings. Furniture, first of all, should be strong and comfortable and serve a distinct purpose. That which is placed in a room solely as an ornament is not only in bad taste, but adds to the labor of caring for the house as well. If a woman tries sincerely to arrange her house according to this idea of adaptation to use, she need not worry about its being "pretty." She may not be rich enough to have expensive things, but if she uses harmonious colors for her walls, floors and upholstery, and chooses furniture for its good design and comfort rather than for its ornamentation, her house can hardly fail to be restful and attractive. This does not mean there should be no ornamentation, for it is just as easy to carry the idea of simplicity too far as it is to overdecorate a room. For example, a chair is not necessarily beautiful, comfortable, or easy to take care of merely because it is made up of straight lines. On the contrary, such severely plain furniture is often both awkward looking and uncomfortable. Too many useless ornaments in a room undoubtedly give it an overcrowded, restless look, and have a further disadvantage in making unnecessary work in cleaning. On the other hand, no ornaments at all would make it seem bare and unfriendly. The sensible woman steers between the two extremes and uses a few ornaments, chosen because they are useful things in especially beautiful form, or because they represent the artistic interests of the family, or have the intangible, but none the less real, value of personal association.

Not the least of all this planning should be done in the kitchen. Here, surely, if anywhere, the housewife should take charge. None know better than she the soul-trying effects of a badly arranged, poorly equipped kitchen. Let this room be well lighted and well ventilated, the walls a light and cheerful shade, the curtains sheer and dainty. And don't have the kitchen too big. Some of the most convenient and up-to-date kitchens are small 8x10 and 10x12 affairs, and the space is utilized in such a way that not an unnecessary step is taken. Leave the separate pantry out of your calculations. They are work makers. They necessitate running back and forth between work table and supplies. A kitchen cabinet takes the place of the pantry today. Here you can store all your supplies—flour, sugar, spices, cereals; here is cupboard room for bowls and pans; here are drawers for small utensils such as spoons, knives, tea towels, etc.; here is your molding board; in fact, everything is at hand, so that all the tiresome running to and fro is eliminated.

The bungalow type of house is coming into favor with the farm women who are endeavoring to minimize their household duties.

It is only a step in this well-arranged kitchen from sink to cabinet or stove (which is on the side of the room opposite the sink and not shown in the picture). Plenty of light is furnished by wide windows above the work shelf, and inlaid linoleum on the floor makes scrubbing easy.

Running water is taken for granted nowadays in the farm kitchen. Have a drainboard on each side of the sink, so that dish washing is made easy. And don't forget a high kitchen stool, a fireless cooker, a wheel tray, an oil or gasoline stove. If there is space for built-in cupboards and broom closets they will never come amiss. Cover the floor with linoleum (it is so easy to clean) or leave it plain hard wood. Put as much convenience and comfort in the kitchen as possible. A little extra expense in labor-saving equipment will pay so handsomely in the end.

Uses For Coarse-Ground Wheat.

To the Editor:—I was surely surprised to see in a report from the home economics experts of the department of agriculture that they have just learned (as I have known for several years) about using coarse, home-ground wheat for breakfast food, etc.

Away back in December, 1915, I gave a recipe for making buckwheat pancakes and also said that coarse-ground wheat was the best substitute for buckwheat that we had ever found, but I did not say that the wheat did not need raising overnight as the buckwheat did. Just mix up the wheat (after sifting in a fine corn-meal sieve) in sour milk, putting in half as much fine wheat flour as you have of the coarse. Then put in a proper amount of soda and stir well and bake. For breakfast food use the same coarse-ground wheat the same as for the pancakes, only do not use any fine flour in this case. Sift the same as for the pancakes with a fine corn-meal sieve or a coarse flour sieve. Boil some water in a low, flat kettle, the amount depending on the size of the family, and stir in the wheat. Keep stirring and boiling about fifteen minutes. Prepare it just as you would corn meal mush to eat with milk or with butter and sugar, and your breakfast food is ready to serve to yourselves or the president of the United States. Served with sugar and cream it is equal to any you can buy.

The same coarse wheat with one third fine flour makes fair graham gems, but remember to sift it well to take out the coarse bran.

Most any community has a mill that will grind it, and most any good feed mill that grinds feed for stock will grind it, and if a bushel of corn is run through first it will be clean, too. Any good, plump, clean wheat the same as you would use for flour for bread is all right for pancakes, breakfast food or graham gems and is just as clean without washing or grinding in a coffee mill. A. L. Foote.

Black Spots on Hominy Objectionable.

To the Editor:—I have always been a silent reader of your paper and have had some very good helps from it. I am so interested that I cannot read in silence any longer.

The butchering lesson in your paper this winter was very useful and well worth a year's subscription to anybody not knowing how to care for meat. I have used recipes something the same and I know they are good, because I never could keep meat perfectly until I used them. I have kept your recipes, so I can use them for the spring butchering, as we have a large family of ten and expect to kill four or five hogs. I have canned fifty-three quarts of beef, and this is such a nice way to care for the summer beef, as we like it better than fresh beef.

Well, I got so interested in this

meat question I nearly forgot the question I was going to ask you to put in the paper for me. We like hominy so well, and I have a time getting the black ends to leave the kernels. I wish some of the readers could tell me how they make nice, white hominy, and how they get rid of the black ends.

I also wish someone would send a good soap recipe, as I will have lots of soap to make this spring. I would like to know how homemade soap can be kept white, if it can be done at all. Mine is just as white as can be when I make it, but when it is dried it always turns a dark color. Will sulphur whiten the soap and clothes or not? If any one has used it, can they tell me how much to use? I never have used it, but I have seen recipes where sulphur was one of the ingredients. Mrs. S. Freimuth.

Cauliflower Pickles.

To the Editor:—Will someone kindly tell me how to make plain and mixed cauliflower pickles without oil? We do not like those in oil and I can find no recipe for them the other way, although I have had homemade ones without oil years ago before I ever expected to be where I could raise my own pickling stuff.

Will someone also tell me how to make sweet spiced cucumber pickles? I want to have my recipes ready for the pickling season. Mrs. M. C.

Everything Tastes Better on the Farm

—everybody knows a farmer's wife has a "knack" for making things that taste great.

Why not add to your reputation by using Calumet Baking Powder? There's something about the taste of goodies made with Calumet that makes folks want to eat 'em all day long.

Give more serious thought to your Baking Powder. Try Calumet—follow the directions on the can. New bake-day results will be yours.

Calumet means greater economy, no loss of materials—big, light, flavory bakings—absolutely pure foods and the *same* success *every* bake-day.

Try Calumet at once on our money-back guarantee.

Tatted Wheel For Doily.

This single-thread wheel makes the prettiest of doilies, or, if made of No. 15 thread, three or four wheels may be joined together and set in on a linen table runner, using half wheels for the ends.

The center is twelve picots, separated by 2 d. s., close and tie securely. Large wheel of 6 d. s., 1 p., 3 d. s., 5 p. with 2 d. s. between; 3 d. s., 1 p., 6 d. s., close. Leave short thread and make small ring of 6 d. s., close; leave short thread and make large ring as before, joining at first picot; leave short thread and make ring 6 d s., join to 2d p. of center ring, 6 d. s., and close. Proceed until you have twelve large and twelve small rings around the center one; tie securely and cut threads.

WHEEL FOR TABLE RUNNER, PILLOW TOP, DOILIES, ETC.

Hulled Corn With Soda.

To the Editor:—In answer to a request from one of our number for hulled corn with soda I am sending my recipe. Cover the shelled corn with hot water and let it stand overnight. In the morning drain this water off, cover again with warm water and put on the stove. For each quart of corn add one tablespoonful of soda and boil until the hulls come off readily. Then wash in clear water, rubbing off the hulls with the hands or a whisk broom. When as clean as you can get it, put it on the stove in cold water and let come to a boil. Let boil a few minutes, then drain. Repeat this until the soda taste is gone. Then boil until very tender, adding salt. When done the water should be about boiled away, leaving a jellylike substance when cold, but care should be exercised not to scorch, as that would spoil it. Dollie Merrill.

Quilting Patterns.

To the Editor:—I wonder if some of the readers can give us any new quilting patterns? I have several quilts I wish to quilt this spring and do not want the same pattern for all. I have the diamond pattern, but no others. If someone could send in some diagrams it might help a number of those who are going to do quilting this spring. A Reader.

Recipes.

Delicious Winter Pudding.—One cupful suet, one cupful molasses, one cupful cold water, three cupfuls flour one cupful currants, one teaspoonful cinnamon, one-half teaspoonful each cloves, allspice and salt, one teaspoonful soda. Mix the dry ingredients together, add currants and suet. Then add molasses and cold water mixed together. Poul in a buttered mold and steam two hours. If steamed in custard cups, the time required will be thirty minutes. Serve with sauce made as follows. Two tablespoonfuls flour, one-half cupful sugar, one cupful water, one teaspoonful vanilla and one tablespoonful butter. Mix flour and sugar, add water and butter and let cook until it thickens. Then add vanilla.

Crown Roast of Lamb.—Select parts from two loins containing the ribs; scrape flesh from bone between ribs, as far as the lean meat and trim off the back bone. Roll meat into a circle to form a crown, sewing ends together. The butcher will prepare this when meat is purchased, if asked to. Trim ends of bones even and bind each bone with a thin piece of fat salt pork, or cover them with buttered paper. For small roast allow about fifty minutes for roasting. Remove covers from bones before serving and cover with paper caps, if desired. Fll the center of roast with mashed potatoes or peas. Be sure ribs are separated at points, before roasting, so they may be easily served.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

A New Game.

Dear Young Folks:—I am an interested reader of the Young Folks' page so I thought I would do my best in writing a letter. I am a girl twelve years old. I live on a farm of 360 acres.

Blue Eyes wanted to learn some new games, so I will tell her one we play. We call it "Fairy Godmother." One player is the fairy godmother and she has a number of parcels. Another is a gnome who is blindfolded and has a cane. All who are playing form in a circle. The gnome and the fairy godmother are inside the circle. The circle marches around until the gnome knocks the floor with his cane. Then the fairy godmother points to somebody and that one walks up to take a parcel and says, "Thank you." If the gnome can guess who it was that said "Thank you" he cannot keep the parcel. The game goes on in this way as long as you wish to play it. —Edith.

Went to Stock Show.

Dear Young Folks:—As I have always enjoyed your letters I think I should write to you.

When my father shipped two loads of cattle and one load of hogs to Chicago this winter he took me along to see the live stock show. We reached there Wednesday noon at 12:30. We had lunch, and say, but I was hungry. We first went to see our cattle sold and then went to see the show. It surely was great. We thought our steers were good, but they were nothing like the show cattle. The champion was a college steer from California. Now I am feeding a steer and if it ever gets as good as that one you will hear from me again. —Cecil.

A Santa Claus.

Dear Young Folks:—One day I was visiting at my uncle's. They had a little kitten that had strayed there some days before. At night they put the kitten out of door and during the night it climbed up on the roof of the house and came down the chimney.

My uncle put the fuel in the stove in the evening, ready to light the next morning. When he started to light the fire he thought he heard a noise in the firebox. It sounded like a kitten. So he dropped his match and looked into the firebox, and, sure enough, there was the kitten. They gave it the name of Santa Claus because it came down the chimney just before Christmas. —Melva.

Answers Leonard's Riddle.

Dear Young Folks:—I am a girl nine years old. I live in the country about six miles from town. I have one brother five years old. We go to school every day. We have about a mile to go. We have nine little calves and my brother and I enjoy feeding and playing with them. I am going to have a garden next spring and plant vegetables in it. I can make pies and cakes.

The answer to Leonard's riddle is a wagon, because it has a tongue but cannot talk, and it runs but cannot walk. —Helma.

Our Fashion Department.

All Patterns 10 Cents Each

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to WISCONSIN FARMER Madison, Wis.

1639—A dainty dress for party or best wear. Pattern is cut in 4 sizes: 4, 6, 8 and 10 years. Size 6 requires 3⅛ yards of 44-inch material, with 1⅜ yards of 27-inch material for the bolero and collar.

Waist 2035-Skirt 2020—A gown with new style features. Waist pattern 2035 is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt pattern 2020 is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It will require 4 yards of 44-inch material for a 24-inch size, for the skirt. The waist requires 2½ yards of 44-inch material for a 36-inch size. Two separate patterns, 10 cents for each pattern.

1710—A neat apron for work or play. Pattern is cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires 2¼ yards of 36-inch material for a 6-year size.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Jesus the Bread of Life.

LESSON TEXT—John 6:24-37.

GOLDEN TEXT—Jesus said unto them, I am the bread of life.—John 6:35.

Following the feeding of the 5,000, Jesus saw the design of the multitude (v. 15), and separated himself unto prayer. Following that communion, the disciples went over the sea toward the City of Capernaum (v. 17), but in his supernatural power he followed them, walking upon the water (v. 19). Midway he entered their ship, and immediately they reached the land toward which they had been striving (v. 21; Mk. 6:48-49). The next day (John 6:22) the people who at this period were following him in such great multitudes, took steps to reach him. Finding that he was not at their side of the lake, they took boats and came to Capernaum, "seeking for Jesus" (v. 24). We read that the common people heard him gladly. These people wanted the comradeship of Jesus, and the longest bread line in the world today is that of hungry-hearted men. The question is, are we willing to give them the loaves of comfort?

I. Bread Which Perisheth (vv. 23-24.) "If you think you will always get the loaves and fishes simply because you have followed the Lord, you have handed yourself a goldbrick."—Dr. Griffin Bull. Most of us will go further for victuals than we will for a vision. When the people found Jesus (v. 25) they rather reprimanded him for leaving them, when the fact of the matter was that he was not beholden to them in any sense whatsoever. It looks very well for these people to be "seeking Jesus," but they were seeking the wrong thing (v. 26). It was not really Jesus himself they wanted, but the loaves and the fishes. It was not the "sign" as indicating his divine character that drew them, but simply the wonder as indicated by the fact that they expected a constant supply of bread, nor did they see in that bread the sign but only the bread.

Salvation is the free gift of God apart from works. Nevertheless he commands the exercise of will. "This is the work of God that ye believe on him whom he hath sent" (v. 29). This is not inconsistent with I Cor. 12:3, l. c., "No man can say that Jesus is the Lord, but by the Holy Ghost." Like the two blades of a pair of shears, the executive act of my will in believing on Jesus is met by the regenerating energy of God's spirit making me a son of his.

The Jews demanded a sign as a condition of believing on him, when he, himself, was the greatest of all signs (v. 36). They sought to enforce their demands by reference to Moses and the manna, but Jesus showed them that the manna was a type of "the (true) bread of God." The characteristics of this bread are: (1) It comes down from heaven; (2) It giveth life unto the world. Jesus' hearers did not understand what he meant, and exclaimed: "Evermore give us this bread." Jesus was trying to impress upon his hearers the same diligence in heavenly matters as in the pursuit of earthly meals.

III. The Everlasting Bread (vv. 35-37). Misunderstanding his teaching (v. 34) Jesus said unto them plainly: "I am the bread of life," meaning that he is the true bread of God. He is not only the giver of the bread of life, but he, himself, is the Bread of Life. As bread will satisfy the needs of the physical body, giving strength, vitality and energy, so he will supply the needs of the soul. He will satisfy the deep hunger and longing which is the evidence of need, and he will also satisfy the thirst, which is the more intense desire, the spiritual craving of the soul. Jesus ministers to the never-failing strength of all who come to him and who believe on him. Coming to him is seeking help and blessing from him. Believing on him is an absolute abandonment of self to him. This multitude had actually seen the living bread (v. 36), yet they believed not because they were so occupied with the material and unreal things of this world.

The old struggle with dry cornstalks will soon be on again and the question comes up whether these should be raked up and burned or plowed under. One should hesitate about burning them because the land needs the vegetable matter which results from their decomposition. If the surface is given a good disking with a sharp disk and the work is done crosswise of the way that the stalks are harrowed down this will generally make them fine enough so that they will plow under and not give much trouble during cultivation. It would be a good thing if all land were plowed an inch or two deeper, because, among other things, that would put the stalks down where they belong.

No Engine can be as good as the Galloway that doesn't have these exclusive Galloway Features.

Valve in the Head Type Cylinder
Note large exhaust valve. Engine head perfectly water cooled. Valve stems also, can't warp. Large intake valve, means ample charge of gas, perfect combustion. No fuel waste. Automobile-ground valves insure perfect compression.

Arch-of-Strength Cylinder Head
Positively cannot blow off. Held by steel studs—nuts perfectly seated, insuring the greatest possible strength in a cylinder head. Absolutely gas tight joint with end of cylinder. This type of cylinder head provides nearly double amount of water space found on other styles.

Sure-Fire Make and Break Igniter
Webster oscillating magneto makes blue-hot spark. Needs no batteries. Absolutely sure fire. Weather does not affect it. Eliminates all ignition troubles. Thousands in continual operation for years without replacing igniter points. Gives least trouble from soot or carbon of any type igniter we ever used. You will get results and satisfaction in using this type on your engine at any time of year, winter or summer.

Economy Carburetor
Worth $15 more on any engine, costs nothing extra on the Galloway. Cuts down fuel bills. Simple, positive air valve adjustment—regulated at will—easy starting in any weather. Mixes perfect fuel charge. Makes gasoline most perfect fuel. Has special cold weather valve which makes easy starting in cold weather. Also gets great power from small amount of gasoline. A great saver of high-priced fuel. Our own invention. Used on all Masterpiece engines. The logical carburetor for you to have on your engine, making it cheaper and better than kerosene.

One-piece Cylinder and Base
on all Galloway engines from 4 to 16 h. p. insures perfect alignment of cylinder, piston, connecting rod, crank shaft and flywheels. Absolute uniformity of wear. Only scientific and successful method of construction for large, heavy duty, heavy weight engines. Two-piece cylinders and frames cannot be kept in line.

LOOK! THIS 1917 MODEL!

Go over it point by point, feature by feature, compare it side by side other make of engine of the same rated horse power or the same bore and stroke! You will decide that no better engine is built. For years and years I have told you to compare the Galloway engines with other engines! That's what my customers have done and that's why the annual sales of Galloway engines run up into the thousands upon thousands. For hard, tough jobs, for year in and year out satisfaction they have no equal at higher or lower prices. If you pay less for an engine than a Galloway Masterpiece you could not possibly be getting as good an engine. If you pay more it would only be paying too much. Large bore, long stroke, simple design, heavy weight, mechanical perfection in their building make them power masters in their field. No matter what size or style engine you want I build them here in Waterloo in my own great chain of factories to fill every need. My 1½, 2½, 4 h.p. and other sizes are just as scientifically designed, built, machined and finished as my mogul engines from 1 to 16 h.p.

QUICK SHIPMENT — LOW PRICES — HIGH QUALITY

SIX 1917 SELLING PLANS --CASH OR TIME

No matter which way you want to buy I have a plan that will suit you—Cash, Bank Deposit, Half Cash—Half Note, All Note, Installment, and No Money Down, to responsible people. Galloway's guarantee is absolute satisfaction or your money back, and he pays the freight both ways. Remember my

$25,000 LEGAL BANK BOND ABSOLUTELY PROTECTS

you and every one of my prospective customers and proves my willingness to have every claim and statement I make fully investigated. I want you to try a Galloway engine on your farm—in your own shop. That's why I have prepared my new 1917 special proposition. I want a Galloway Masterpiece 1917 model gas, kerosene or distillate engine in every township in every state between now and June 1st, and my **new 1917 prices** and selling plans will get them.

NOTE 1917 IMPROVEMENTS

Adjustable bearings, no lost motion, develops way above rated horse power. Economy carburetor, worth $15 more on any engine, costs nothing extra on the Galloway—cuts down fuel bills. Large valves in head, exactly like highest class automobile motors, perfect scavenging, admits perfect combustible mixture. Double ball governor. Large, heavy flywheels. Big bore, long stroke, heavy weight, perfect balance, smooth running. Perfect lubrication, winter or summer. Webster magneto (extra) supplies blue-hot spark. Make and break igniter, never misses fire. Easy started, no cranking, needs no batteries. Cylinder and water pot frost proof. Galloway engines honestly rated, scientifically, accurately and handsomely built. Our description the truth. Shipments made from Waterloo, Council Bluffs, Kansas City, St. Paul, Chicago, whichever is nearest you.

GET THIS 1917 BOOK ABOUT ENGINES

I want you to have this new book about the famous Galloway Masterpiece engines. It tells you how to pick out, size up and judge an engine. Gives you engine secrets and facts. Tells why to insist on heavy weight, large bore, long stroke and low speed; why light weight, high speeded engines are not to be compared with Masterpiece engines and why you are asked four profits for some engines no better. Tells why we sell direct from factory to farm or shop at wholesale. How to install an engine and hook up machinery. How Galloway engines are built. How to lay out and build a cheap, efficient power house. Why our prices on high class stationary and portable engines and saw rigs are so low considering quality. The truth about engines is all set down in black and white. This book is a guide to saving money on every farm. That's why I want you to get it. If you expect to buy an engine I'll pay the postage and be glad to send the book. Ask today. A postal will do. Address me as below.

PART IV--One Squaw Man.

CHAPTER VII—Continued.

The praise seemed a very little thing to her. Her bravado was over; she felt as if she must cry if they did not leave her alone. Of what use were words, if he should never come back--never know that he was cleared of suspicion? If they had so many kind words now, why had they not found some for him when he needed them? She did not know the uncompromising surliness that made him so difficult of approach to many people, especially any who showed their own feeling of superiority, as most of them did, to a squaw man.

She heard that term from the Major, a moment after he had shaken hands with her. He had asked what were the other suspicions mentioned against Genesee; she could not hear the answer—they had moved a little apart from her—but she could hear the impatience with which he broke in on their speech.

"A squaw man!—well, what if he is?" he asked, with a serene indifference to the social side of the question. "What difference does it make whether the man's wife has been red, or white, or black, so long as she suited him? There are two classes of squaw men, as there are of other men on the frontier—the renegades and the usual percentage of honest and dishonest citizens. You've all apparently been willing to understand only the renegades. I've been along the border for thirty years, and some of the bravest white men I've ever seen had Indian wives. Some of the men whose assistance in Indian wars has been invaluable to us are ranchmen whose children are half-breeds, and who have taught their squaws housework and English at the same time, and made them a credit to any nation. There's a heap of uncalled-for prejudice against a certain class of those men; and, so far as I've noticed, the sneak who abandons his wife and children back in the state, or borrows the wife of someone else to make the trip out here with, is the specimen that is first to curl his lip at the squaw man. That girl over there strikes me as showing more common sense than the whole community; she gave him the valuation of a man."

The Major's blood was up. It was seldom that he made so long a speech; but the question was one agianst which he had clashed often, and to find the old prejudice was so strong a factor in the disorganizing of an outpost was enraging.

"And do you realize what that man did when he took that trail north?" he demanded impressively. "He knew that he carried his life in his hand as surely as he carried that body. And he went up there to play it against big odds for the sake of a lot of people who had a contemptible contempt for him."

"And cursed us soundly while he did it," added one of the men, in an aside; but the Major overheard it.

"Yes, that's like him, too," he agreed. "But, if any of you can show me so great a courage and conscientiousness in a more refined citizen, I'm waiting to see it."

Then there was the quick fall of hoofs outside the shack, hurried questions and brief answers. One of the scouts from the north ridge rushed in and reported to Major Dreyer.

"A gang o' hostiles are in sight—not many; they've got our horses. Think they carry a flag o' truce, but couldn't spot it for sure. They're not a fighten' gang, anyway, fur they're comen' slow and carryen' somethen'."

"A flag of truce? That means peace. Thank God!" said Tillie, fervently.

"And Genesee," added the Major.

As for Rachel, her heart seemed in her throat. She tried to speak, to rush out and learn their message, but she could not move. An awful presentiment bound her. "Carrying something!"

CHAPTER VIII.

"When the Sun Goeth Down."
"Opitsah!—Klahowya."

THEY brought him—his dark, sad-faced brothers—bearing him on a bed of elastic poles and the skins of beasts; and walking through the lines of blue-coats as if not seeing them, they laid him on the floor of the shack, and grouped themselves clannishly in one corner, near his head. Stuart knelt with trembling hands to examine the cruel wound in the throat, and turned away, shaking his head. He could not speak. There was a slow, inward hemorrhage. He was bleeding to death.

"Determination has kept him alive," decided the Major, when the spokesman of the Kootenais told of the shot on the mountain, and how they had to carry him, with Snowcap in his arms, to the wigwam of Grey Eagle; of the council through which he kept up, and then told them he would live until he reached camp—he was so sure of it! For the body of Snowcap he had asked the horses left in the gulch, and was given them—and much more, because of the sorrow of their nation. He did not try to speak at first, only looked about, drinking in the strange kindness in all the faces; then he reached out his hand toward Rachel.

"Opitsah!" he whispered, with that smile of triumph in his eyes. "I told you I'd live—till I got back to you;" and then his eyes turned to the Major. "I got a stand-off on the hostilities—till your return—inside my coat—I wrote it." He ceased, gasping, while they drew out the "talking paper" with the mark of Grey Eagle at the foot, and on it also were their murderous stains.

"You—treat with them now," he continued, "but be careful. Don't shirk promises. They're easy managed now—like a lot of children, just because they shot me—when I was carrying Snowcap home. But they'll get over—that, and then—be careful. They were ready for the warpath—when I got there."

He saw Captain Holt not far from him, and through the pallor of his face a faint flush crept.

"Well, I've come back for my trial," he scowled, with something of his old defiance; and the Major knelt down and took his hand.

"That's all over, Genesee," he said gently. "It was a big mistake. There is not a soul here with anything but gratitude and admiration for you. It was your own fault you were suspected; Miss Rachel has explained. Why did you not?"

He did not answer—only looked at her, and seemed gathering his strength for some final effort.

"I want someone—to write."

He was still holding Rachel's hand. She had not said a word; only her eyes seemed to tell him enough.

Stuart came forward. "Will I do, Jack?"

Jack nodded, and more than one was astonished at the signs of grief in Stuart's face. Rachel was past speculation.

"This lady here," said Genesee, motioning to her, "has done a heap for me—more than she knows—I reckon—and I want—to square things."

Rachel attempted to speak; but he raised his hand.

"Don't," he whispered. "Let me say it—tillikum." Then he turned to Stuart. "There's a bit of ground up in the hills; it's mine, and I want her to have it—it's Tamahnous Hill—and the old mine—write it."

She thought of that other woman, and tried to protest. Again he saw it, and pressed her hand for silence.

"I want her to have it—for she likes these hills, and—she's been mighty good to me. No one will interfere—with her claim—I reckon."

"No one shall interfere," said Stuart, toward whom he looked. Genesee smiled.

"That's right—that's all right. She won't be afraid of the—witches. And she'll tell you where I want to go—she knows." His voice was growing fainter; they could see he was almost done with the Kootenai valley.

"In my pocket is something—from the mine," he said, looking at Rachel; "it will show you—and there's another will in the bank—at Holland's—it is—for Annie."

Stuart guided his hand for the signature to the paper. Stuart wrote his own, and Hardy followed, his eyes opening in wonder at something written there.

A slight rustle in the group at the door drew the Major's attention, and a young face coming forward made him turn to Stuart.

"I had altogether forgotten that I brought someone from Holland's for you—a boy sent there to find J. S. Stuart. I knew it must be C. S. Stuart, though, and brought him along."

A dark-faced little fellow, with a sturdy, bright look, walked forward at the commander's motion; but his wondering gaze was on the man lying there with such an eager look in his eyes.

"This is Mr. Stuart," said the Major, and then turned to Genesee.

The Stuart's face was white as the wounded man's as the boy looked up at him, frankly.

"I'm—I'm Jack," he said; "and mamma sent a letter."

The letter was held out, and the boy's plucky mouth trembled a little at the lack of welcome; not even a handshake, and he was such a little fellow—about ten. But Stuart looked like a man who sees a ghost. He took the letter, after a pause that seemed very long to the people who watched his strange manner. Then he looked at the envelope, took the boy by the arm, and thrusting the Major blindly aside, he knelt by Genesee.

"This is for you, Jack," he said, motioning the others back by a gesture—all but Rachel—that handclasp was so strong! "and your namesake has brought it."

"Read it," and he motioned Rachel to take it; "read me Annie's letter."

She read it in a low tone—a repetition of that other plea that Jack had left with her, and its finale the same longing request that her boy should at last be let know his father. Stuart was in tears when she finished.

"Jack," he said, "ten years is a long time; "I've suffered every hour of them. Give me the boy; let me know you are agreed at last. Give Annie back to me!"

Jack raised his hand to the bewildered boy, who took it reverently.

"You are Annie's boy?" he whispered; "kiss me for her—tell her—" And then his eyes sought Stuart's—"I held them in pawn for you. I reckon you're earnest enough now—to redeem them. What was that verse about—giving back the pledge when—the sun goes down? You read it. Mother used to read it—little mother! She will be glad, I reckon—she—"

Stuart was sobbing outright, with his arms about the boy. Rachel, with the letter in her hand, was as puzzled as those who had drawn out of hearing. Only the Indians stood close and impassive. Jack, meeting her eyes, smiled. (To be continued.)

The Dreaded Scours Lead Direct to Calf Cholera

The digestive organs are paralyzed; food lies in an undigested mass in the stomach; it sours and ferments and decomposes. Do you wonder that so many calves die in a few hours after cholera strikes?

Dr. David Roberts' CALF CHOLERA REMEDY

overcomes the trouble by righting the digestive organs. It regulates the flow of gastric juice and soothes and heals the sore mucous membrane. It liquefies the poisonous gases already formed in the stomach and prevents fermentation. Digestion becomes normal and the disease is ended. Don't let the trouble go too far. Begin with **Calf Cholera Remedy** right away when scours appear. The disease is contagious.

Dr. David Roberts' Laxotonic

Removes all risk of improper treatment of live stock for stoppage of the bowels Three out of four cases of stoppage of the bowels are due to paralysis of the bowels. This is caused by partial or complete paralysis of the digestive organs. The food and contents of the bowels lie dormant, decomposition sets in and gives off a poisonous gas The result is that the animals show high fever, sunken eyes, loss of appetite and a gradual wasting away until finally death comes. Dr. David Roberts' **Laxotonic** relieves the paralytic condition of the digestive organs, moves the rapidly decomposing matter along and opens the bowels.

Cow Cleaner helps cows at calving time. Cleans and removes the afterbirth naturally; leaves organs in healthy breeding condition. Use ***Antiseptic*** to soothe and heal soreness of the genital organs.

Cow Tonic aids digestion, tones and conditions the cow system, keeps up appetite and prevents falling off of milk.

Breeding Tonic prepares and conditions for breeding. Calves are dropped naturally, complications are avoided. Use also for other animals.

Calf Meal, Diolice, Badger Balm, Laxotonic and Stokvigor are other Dr. Roberts' Prescriptions which mean better live stock.

Get Dr. Roberts' Live Stock Prescriptions at your drug store—nearly 4000 dealers in United States. Don't take anything but the package that has Dr. Roberts' picture right on the front. If you do not have Dr. Roberts' 184-page "Practical Home Veterinarian," treating all diseases of all live stock, enclose $1.00 and receive copy by mail. Address

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Caked Udder.

Please tell me the best remedy for a cow with caked udder. She was fresh about three months ago and the swelling was all gone, but now she is swollen again.

Apply camphorated oil to the affected parts once or twice daily. See that the cow has a good bed at night so the udder can rest easy. If the trouble persists then give three times daily the following: Fluid extract of phytolacca, two drams, and nitrate of potash, one dram. Give this as drench.

Affected Eyes.

I have a ten-year-old mare that is bothered with her eyes. In the summer time she is all right and we cannot see that her eyes bother her at all, but in winter she gets spells in her eyes. Can you tell me what causes this? I had her examined by a veterinarian last winter and he gave me something to put in her eyes, but it did not help and this winter she has those same spells again.

From the limited description you have given of the case it would be hard to say what the trouble can be. We would not care to prescribe unless a better description was given.

Scrotal Fistula.

I had a colt castrated last spring and afterward it got a sort of fungous growth about the size of a man's fist. We had a veterinarian remove the bunch, which nearly took the life of the colt. He is now looking fine, but has still a little opening from which matter runs at times. Can you tell me what to do for it?

The first condition was that of schirrhus cord. It may be that the operator did not get quite all the diseased tissue the first time, as it is sometimes difficult. About the only way out of the difficulty is another operation.

Poor Quality of Milk.

We have a Jersey cow that calved November 20th. For five weeks her milk was all that could be desired. Then we noticed a decided falling off in the quality of the milk, but the quantity is as before. She will leave hay to chew cobs and pick over the manure from the horse barn. Have been feeding corn and mixed clover and timothy hay. She seems to be in good health though a little thin. She has no cough. Would appreciate any help you can give us, as we never had anything like it before.

This trouble may be because of the cow neglecting her better feed for poorer feed. This animal seems to crave something in the cobs and manure. Give her some bran and chops and a small amount of salt each day and see if she doesn't improve.

Rheumatism.

I have ten head of Poland China gilts. I was feeding them all the good alfalfa hay they wanted in a rack, a little slop (about one pound of bran and one to one and a half pounds of meat meal) in the morning and about three or four good ears of corn at night. They were all bred in December. Three weeks ago one of them was seriously lame in the left fore quarter. I removed her to a separate lot. Her bowels were in excellent condition, her nose moist and she ate with a good appetite and has continued in the same way ever since. After she had been lame in the left fore quarter for about ten days she got better and then the trouble changed to the right fore quarter and the left seems all right. She comes out at feed time, but lies in the nest quite a bit. The lame shoulder seems to hurt her when she is moving around and she goes on three feet. I believe this is a case of rheumatism, although I have never seen it in hogs before. These gilts are all pure breds and were given the double treatment for cholera before they were weaned. This gilt has been bred about five weeks now and I believe is with pig. What do you think ails her and what should be done to aid her to get well?

Provide good quarters and administer some laxative and also laxative food. Give one-half dram doses of salicylate of soda in slop every four hours for a short time. The outcome of the disease is uncertain and if the animals are in butcher condition they should be disposed of several days after the cessation of the symptoms of an attack.

Care of the Heifer at Calving Time.

To the Editor:—The first parturition is a critical period with the heifer because at this time she may be easily spoiled. Some of the worst kickers I have ever known have been made so by being handled in a wrong manner during the first lactation. I have broken a good many heifers to milk and have never spoiled any of them. The person who does the milking at this time should have infinite patience and forbearance. He knows the heifer is pretty sure to kick when he goes to milk her and he must not permit the fact of the kicking to excite him in the least. I have always followed the practice of standing by her side trying to milk her with one hand and caress her with the other. The milk is a secondary consideration and it does not matter if it goes onto the ground. The chief point is to accustom the heifer to being milked.

When the heifer sees that her kicking does no good she will little by little give it up. But the milker generally gets several kicks before this stage is reached. His compensation comes afterwards in having a cow that never kicks. As I have never failed to attain that end I have great faith in the process.

Those who have had experience in handling dairy cows know that until about the fourth week after calving the cow does not come to her highest and best flow of milk. During these first few weeks of the lactation period I do not give her all she will eat and a part of the ration is of a laxative nature. I usually place her on full feed at the end of a month at which time the flow of milk is generally at its best.

The heifer, however, with her first calf may not come to her fullest and best flow until the fifth or sixth week after calving, owing to the fact that bringing forth young for the first time is a more severe physical strain than later in life, hence a longer time for recovery from the weakness caused by gestation will be required. For this reason the heifer coming fresh should be fed more carefully than older animals at the same period. When the heifer has reached the point of giving her fullest flow of milk I feed her with the idea of keeping her milk flow up through the dry time of summer and well toward the time when she will drop the second calf.

The pasture in which the heifer is kept should have good fences. This will prevent her from learning breachiness. A cow kept in a pasture that is poorly fenced will acquire the habit of getting out much more quickly than when kept under proper conditions.

Subscriber.

How to Skim the Milk.

Experience has shown that in general practice the churning of whole milk results in butter of a poorer quality and in greater losses of butter fat in the buttermilk than if cream is churned, says the South Carolina College of Agriculture. It is, therefore, best to skim the milk and churn the cream.

The best way to skim the milk is by means of a separator. A farmer who has only two or three cows, but no separator, may put the milk into deep, narrow cans (shotgun cans) and set them in cold water, and when the cream rises it can be removed with a shallow spoon.

Where this system is used it usually takes about twelve to eighteen hours for all the cream to rise. Care should be taken to keep the milk cold, in order to make the cream rise rapidly.

The old method of setting the milk in shallow pans should not be used, as the cream does not rise so completely as when set in deep cans in cold water; furthermore, the quality of the cream is not so good and there are more vessels to wash and care for.

Waukesha, Rock, Jefferson, Dodge and several others of the old and established counties of Wisconsin are considering the county agent plan.

SAFEGUARD your stock, tools, hay and grain. The farmer needs fire protection even more than the city dweller. Most of the great "skyscrapers" of America are fireproofed with Natco Hollow Tile. Fireproof your farm the same way. Natco Barns need practically no repairs—age and weather-proof. The Hollow Tile walls do not hold moisture or odors. Dead-air spaces prevent sudden changes in temperature. And the cost—but a trifle more than frame construction. You will soon save the difference in reduced insurance, coal and repair bills.

Build with Natco Hollow Tile

Corn cribs, milk houses, garages, poultry houses, etc., may be made fireproof and permanent with Natco Hollow Tile.

Send for our new book "Natco on the Farm." Fully illustrated from photographs. Tell us what you plan to build. We have many farm building plans to submit and will help you—*free.*

Natco Imperishable Silo is the ideal silage preserver. The glazed hollow tile walls are moisture and acid-proof and fire-resisting. Stoutly reinforced with steel bands laid in mortar. No hoops to tighten. Any mason can erect a Natco. Fully guaranteed. Truly, "The Silo that Lasts for Generations."

Write *today* for our book, "Natco on the Farm," also ask for Silo Catalog.

PUFFER-HUBBARD MFG. COMPANY

3205 26th St. MINNEAPOLIS, MINN.

Simple Single Unit — Built by Practical Dairymen

"Success for 9 Years"

You can't afford to accept a milker that has done less than HINMAN MILKERS

Milked 140,000,000 cows the last eight years. Milks valuable registered cows throughout this country and the world. Over 24,000 sold—more than all other milking machines combined. So simple that a boy can milk eighteen to twenty-five cows an hour. This simplicity also means low first cost and low upkeep cost.

No complicated pulsating mechanism—no air pipe lines—no vacuum tanks.

Simple combination of pump, vacuum in valve chamber and natural action teat cups—no upward squeeze.

Write for Big FREE Catalog if you milk ten cows or more.

WHAT EVERY FARMER WANTS

Cheap and Efficient Transportation His Great Need--How It Can Best Be Assured

THE present situation of the railroads presents two alternatives, efficient federal regulation or federal ownership.

The experience of other countries proves conclusively that government ownership of railroads is more costly and less efficient than the system of private ownership in this country. The railroads of the United States have the lowest freight rates, the smallest capitalization per mile, the highest operating efficiency and pay the highest wages of any railroads in the world.

High Rates on Government Roads

The charge for hauling a ton of freight one mile on the government owned roads of various countries and on the privately owned roads of the United States is shown in the following table.

	Average Freight rate per ton mile
Germany (Gov't Railways)	1.24 cent
France "	1.30 cent
Australia	
New South Wales "	1.59 cent
South Australia "	1.75 cent
Switzerland "	2.63 cent
Canada (Private ownership)	.76 cent
United States "	.73 cent

No railway system under government ownership can show a record for cheapness and service approaching that of American Railroads under private ownership. What the railroad situation needs is the adoption of a system of national regulation that will encourage initiative and investment and enable the carriers to meet the growing requirements of American business.

Keep Railroads Out of Politics and Politics Out of the Railroads

It is to the interest of the railroads and the interest of the whole country that the railroads keep out of politics and that politics be kept out of their management.

Government ownership under our political system would make the control of the railroads a partisan issue at every election. It would bring political and economic disaster.

No man in the country stands to lose more by the adoption of a political system of railroad management than the farmer. None will profit more from efficient national regulation that will do away with the present conflicts and waste of local control and enable the railroads to make the extensions and improvements necessary to keep pace with the business progress of the nation.

We invite discussion of this question and shall be glad to answer questions and to supply information on request.

Financing the Legislative Representative.

In connection with our report of Farmers' Week, The Wisconsin Farmer mentioned the fact that Mr. Geo. McKerrow, of Waukesha county, had been named by several agricultural and live stock organizations to represent them before the Wisconsin legislature. The appointment of Mr. McKerrow and the work which comes under his direction was first discussed in the meeting of the Wisconsin Live Stock Breeders' Association, held early in February, and it was unanimously agreed at this meeting that some person, sufficiently posted on state affairs, should be in readiness during the session of the general assembly to provide such information as the legislators require concerning bills of interest to farmers.

Of course, it costs money to keep a man at Madison during the session of the legislature. While a number of the societies receive state aid, they could not expect to use any of the funds received from the state to aid them in getting more funds from the state. Hence, it was the decision of the members of the Wisconsin Live Stock Breeders' Association and other organizations interested in this work that the needed funds might be received by popular subscription, and an appeal be made to the farmer who feels that it is right and proper to have a representative of his interests constantly on hand during the legislative session. Interests not half so important as farming have representatives before the legislature. Within the past few days the Wisconsin Live Stock Breeders' Association has received the following subscriptions:

M. B. Goff, Door county, $4.50; J. B. Ahlers, Washington county, $5; L. A. Wright, Columbia county, $3; Wm. F. Renk, Dane county, $10; James Fisher, Crawford county, $5; August H. Vogel, Waukesha county, $10; J. W. Gehl, Washington county, $1; Charles L. Hill, Fond du Lac county, $5; J. W. & H. A. Martin, Richland county, $10; D. W. Emerson, Ashland county, $5; W. H. Houser, Buffalo county, $5, and Arthur Broughton, Rock county, $10.

Others are invited to send in their subscriptions in any amount they may see fit. These should be sent to the Wisconsin Live Stock Breeders' Association, Madison, Wisconsin. They will be properly credited and due accounting made.

Duroc Jersey Interests Flourish.

Sec. J. R. Pfander, of the National Duroc Jersey Record Association, calls attention to the fact that there were 1,532 pedigrees recorded in January and ninety-six new members were received. All reports indicate that breeders are getting better prices for their breeding stock than ever before. The association is planning on rather an elaborate program for 1917. Last year it conducted fourteen futurity shows and this year it is the intention to put on three different kinds of futurity shows, namely, the national at Omaha, state futurities and district futurities. Any breeder is eligible for the national, one state futurity and one district futurity.

State futurities carrying classifications of $400 each will be promoted at the California State Fair, Illinois State Fair, Iowa State Fair, Topeka, Kansas, Louisiana State Fair, Minnesota State Fair, Missouri State Fair, Montana State Fair, Nebraska State Fair, Oklahoma State Fair, Oregon State Fair, South Dakota State Fair, Texas State Fair and Wisconsin State Fair.

District futurities, carrying classifications of $200 each, will be promoted at the Colorado State Fair, Boise, Idaho; Caldwell, Idaho; Hutchinson, Kansas; New Orleans, Louisiana; Columbia, Missouri; Grand Forks, N. D.; Childress, Texas; Utah State Fair; Burlington, Iowa; Cascade International; North Yakima, Wash.; Malvern, Iowa; Mt. Pleasant, Iowa; Peoria, Illinois; Sioux City, Iowa; Janesville, Wisconsin; La Crosse, Wisconsin, and Owatonna, Minn.

Full information about these futurities may be obtained by writing J. R. Pfander, office of National Duroc Jersey Record Association, Peoria, Illinois.

A Supreme Court Judge's Opinion on Compensation

SPEAKING before the Yale Law School in 1891, Justice Brewer of the United States Supreme Court, said:

"I am here to say to you in no spirit of obnoxious or unpleasant criticism of any tribunal or judge, that the demands of absolute and eternal justice forbid that any private property, legally acquired and legally held, should be spoliated or destroyed in the interests of public health, morals or welfare, without compensation"

It is conceded that the United States Supreme Court is composed of the ablest judicial minds of America, therefore we believe that Justice Brewer's opinion is a safe guide to follow in determining what is fair, right and just.

Surely what is fair for *one* is fair for *all*.

If one class or many classes are entitled to *compensation* when damaging legislation becomes law, are not all classes, equally within the law, entitled to protection under the principle of *compensation?*

When any ordinary business partnership is dissolved, the law requires a fair and equitable division of the assets. Inasmuch as the United States Government, our State Government and *your* Local Government receive taxes and license fees (profits) through the Brewing Industry, should not just *compensation* be made if this partnership relation is annulled?

Can one partner give up or abandon the business—destroy its value, its income producing power—without making a fair and honest settlement with the other partner?

The State compensates for diseased cattle destroyed by order of the State.

The City compensates for private property taken over for public use.

The Town, City or County compensates anyone who may be injured (deprived of his income-producing ability) on the public highway through neglect or carelessness of highway officials or employes.

Compensation prevails *practically* everywhere—with all individuals—with all industries, *except one;* that one exception is brewing and allied industries

Why this discrimination?

Can you explain it?

Should not the industries that pay the heaviest taxes have as much *right* under the law as those that pay the smallest taxes?

Property is property. Mine is as good as yours. The law that protects *your* property should give *mine* equal protection.

The Brewers of Wisconsin

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Chesney Farm Guernseys.

THE Chesney Farm Guernsey herd at Lake Villa, Ill., owned by O. W. Lehmann, is one which is fast making Guernsey history. It is almost a Wisconsin herd, being only five miles across the line in Illinois, and, therefore, is of interest to Wisconsin breeders. The herd consists of some 115 head of imported and home-bred animals. Semi-official testing is continually being carried on. There are already 26 A. R. O. cows in the herd, and eight now on test with four more ready to go on test in the very near future. The buildings are models of convenience and sanitation. A new test barn is now being erected with 14 steel pens. They are equipped with feed racks, water buckets and wood block floors. At the present time they are advertising on page — eight registered cows and one bull for sale. Three of these cows were imported, one is from an imported sire and dam and the other four are home-bred cows. Two of the imported cows are due to freshen soon. One of the imported cows is a daughter of Imp. Gov. of the Chene 2d. These cows are all bred to the good herd bulls on the farm, viz.: Pinecrest King France, Dairymaid's Stanford of Pinehurst, or Peerless of Midlothian. The last-named bull is also for sale. He was sired by George Washington of Fairfield Farm 10866, a son of Imp. King of the May. The dam of George Washington of Fairfield Farm was Imp. Hayes Richesse 2d, that has an A. R. O. record of 10,630 pounds of milk and 642.43 pounds of butter fat in a year. The dam of the bull for sale is a daughter of Pretor 9346, that has 13 A. R. daughters, several of which have records over 600 pounds fat. Send for pedigrees and information in regard to these cows, and this bull, if you are in need of high-class breeding stock. See page 29.—Adv.

Dispersion Sale Linscott Jerseys.

R. J. LINSCOTT, Holton, Kan., will disperse his herd of register of merit Jersey cattle at public auction, June 5th. The Linscott herd consists of over 100 head, including about 70 cows and heifers in milk or springing, also 30 head of young heifers and 10 bulls, including the herd bulls, all of which go in the sale. The bulls in use include Jacoba Irene's Premier (his dam, Jacoba Irene, 1,191 pounds butter, one year; 2,927 pounds and three calves, 37 months). Another bull in use is Gamboa's Knight, son of the unequaled Gamboge's Knight and out of a register of merit granddaughter of Flying Fox. Back of these sires, the bulls which have been in service in the Linscott herd include Flora's Golden Fern, son of Golden Fern Lad (31 tested daughters and 29 sons, sire of R. O. M.); Eminent's Coronet by Eminent 2d, sold for $10,000, sire of 88 tested daughters and 28 sons, sires of R. O. M. cows; Imp. Oakland's Sulta, pize bull in Island of Jersey and America, first sire of register of merit in Kansas; Tommie Tormentor, St. Lambert of Idylwild and others. With the herd bulls, Jacoba's Irene Premier and Gamboa's Knight, together with the 30 cows bred to these bulls and young things sired by such bulls, breeders who attend this sale will have the opportunity to purchase the blood of the world's champion butter cows close up. The catalog of historical pedigrees will be sent any address upon application to R. J. Linscott, Holton, Kan.—Adv.

Percheron Dispersion.

THE dispersion of two of Wisconsin's best studs of Percheron horses will take place at the Wisconsin State Fair ground at Milwaukee, on Wednesday, March 21st. These two studs are that of Louis Lewellin & Son, Waterloo, and Sutter, Delavan, Wis. The former stud needs no introduction to Wisconsin breeders as it has been one of the heaviest winners at the Wisconsin State Fair for several years past. All of the prize-winning stallions and mares will be included in this sale, as well as their offspring. The Sutter stud is composed entirely of imported stallions and mares, and their offspring, and is one of the few opportunities that breeders will have to secure imported stock. Every farmer and breeder should make it a point to attend this sale and supply himself with seed for his future "pulling power." Catalogs giving a complete description of these horses are now ready and may be obtained from J. A. Boyd, Milwaukee, Wis. When writing for catalogs kindly mention that you saw their advertisement on page 28 of The Wisconsin Farmer.—Adv.

Herefords at St. Paul March 23d.

ATTEND the Hereford sale at South St. Paul, Friday, March 23d. This is under the auspices of the Minnesota Hereford Breeders' Association and some good cattle have been listed. There will be 53 bulls (see advertisement) and 34 females. Seven bulls are by Standard 13th, three by Prince Rupert 58d, two by Jerome Fairfax, and one by King Fairfax. All are of the very best breeding. They have been tuberculin tested and every animal is guaranteed to be a breeder. You should get a catalog and attend. Write for one to J. S. Montgomery, sale manager, University Farm, St. Paul, Minn. Please mention The Wisconsin Farmer.—Adv.

Wiegands' Jersey Bull.

B. & K. T. WIEGAND, Cleveland, Wis., are offering a fine yearling Jersey bull at a very reasonable price. The bull is a splendid individual with the best of conformation, and is a sure breeder. He is a son of Wisconsin's champion three-year-old Jersey. See the advertisement on page 28 and write the Wiegands for further particulars.—Adv.

National Incubators Built on Government Specifications.

THE National incubator is built on specifications as outlined by the United States Department of Agriculture, in Farmers' Bulletin No. 236. This incubator has been on the market for many years, and has stood the strongest tests in every state in the Union. Many owners of this incubator praise it because of its hatching ability in variable weather. It is built of only the best

high-grade material, is metal covered, and equipped with a special high-grade rolled copper tank, and is especially set up ready to operate. One of the leading features of the National is its exceptional lamp, which produces a steady blaze, without smoke or fume. The National is offered for sale on forty days' trial, which shows the exceptional confidence the manufacturer has in the machine. You are thus allowed to secure your first hatch during the trial period. This is an unusual offer. Their advertisement appears in this issue on page 5. We call the special attention of all our readers interested in poultry to this exceptional machine, which costs only $10, and is shipped freight prepaid. Their big new poultry book will be sent you free if you will simply address the National Incubator Company, Box 504, Racine, Wis.—Adv.

Dr. Truman Brophy's Guernseys.

WISCONSIN Guernsey breeders are familiar with the name of Dr. Truman Brophy, who owns Ingleside Farm, at Edison Park, near Chicago. His herd of Guernseys was established in 1904 and for the past 13 years has been one of the best and most progressive herds in the middle West. Great care has been taken in the selection of breeding stock, both for ideal type and heavy production ability. By careful mating and good care a herd of extraordinary ability and type has been developed. Official testing has been conducted from the time the herd was established, and a large number of very creditable records have been and are being made. Wisconsin's leading breeders are familiar with the lines of breeding, the conformation and the production ability of the animals in this herd, and have purchased herd sires. Among the Wisconsin herd sires from Ingleside Farm are Fox Bros., Geo. W. Brown, and Fruit Bros., three of the largest breeders in Waukesha county. On page 29 Dr. Brophy is advertising an exceptionally good bull for sale in Miriam's King of Ingleside 34140. He is a double bred King of the May, as both his sire and dam were sired by sons of Imp. King of the May. His dam May King's Miriam of Ingleside has an A. R. record of 444.76 pounds of fat (in class E.) This bull comes from a long line of heavy producing cows on both sides of his pedigree. His five nearest dams average 10,812.46 pounds of milk and 580.28 pounds of butter fat in a year and eight dams close up average 645 pounds fat in a year. In his pedigree we find such names as Imp. King of the May, Dolly Bloom, Rutilas Sheet Anchor, Imp. Hayes Richesse 2d and others equally noted. Send for the extended pedigree of this well-bred bull, as he is being priced very reasonably. When writing kindly mention The Wisconsin Farmer.—Adv.

Shekletons' Draft Stallions For Sale.

FRANK P. SHEKLETON & SONS, Lawler, Iowa, well-known importers, breeders and exhibitors of Percherons and Belgians, write as follows: "Within the last ten days we sold to Morris Dwyer, Wadena, Iowa, a dark gray two-year-old Percheron stallion. Mr. Dwyer purchased this horse to head his band of pure-bred mares. E. A. Krusemark, Welcome, Minn., purchased a four-year-old dark gray Percheron stallion weighing a ton. Bray & Jackson, Grinnell, Iowa, purchased a five-year-old imported Belgian stallion weighing 2,100 pounds. This horse was of our last importation and is an outstanding good one. Max Kreigel, Kilbourn, Wis., selected a five-year-old imported sorrel Belgian stallion weighing a ton. T. G. Mosher, Elkton, S. D., purchased a four-year-old Clydesdale stallion. White & Day, La Crosse, Wis., selected a very fine four-year-old black Percheron stallion weighing a ton. Hugh Jones, Eddyville, Iowa, selected a dark gray four-year-old Percheron stallion weighing over a ton to head his band of mares. A six-year-old Percheron and a good Belgian stallion were sold to James Harding, of St. Paul, Minn. We have in our barns a large number of big two-year-old ton stallions, some of them weighing up to 2,100 pounds, and some extra good matured stallions weighing up to 2,400 pounds each. We are making very reasonable prices on our stallions at present. We have a number of stallions that have been in service a few years ranging in age from six to ten years and weighing up to 2,200 pounds each on which we are making very attractive prices. Our stallion business has been very active up to the present time and we look for a heavy business during the spring months." See page 28 and write for prices, kindly mentioning this paper.—Adv.

Thompson's Mule-Foot Hogs.

CHARLES D. THOMPSON, the breeder of Mule-Foot hogs at Letts, Ind., reports that he has recently made shipments to 14 different states, and is preparing a shipment of 12 head for Central America. The Thompson Mule-Foots are sired by or bred to champion boars, are cholera immune, and will be priced worth the money. Mr. Thompson also breeds Hereford cattle, and if you are interested in Herefords or Mule-Foots write him your wants. See page 31.—Adv.

Adam Lorenz Holsteins.

WHEN we first saw the Holstein herd of Adam Lorenz, Sheboygan Falls, Wisconsin, a few years ago, we were convinced that he had a herd of heavy-production ability. Our convictions of that time were verified last winter by the advanced registry records which were made by individuals in this herd. Sixteen cows were put into the advance registry and all with creditable records. Among these records were those of Parthenea Jolie Clothilde De Kol, that as a three years old gave 560.5 pounds of milk (an average of 80 pounds a day) and made 2,664 pounds of butter. This will be recognized as a wonderful record. Another cow made over 28 pounds in an older class and several others made records well over 20 pounds. At the present time Mr. Lorenz has a bull calf 10 months old for sale, out of the 26.64-pound three year old. He also has four other young bulls from seven to ten months old and eight yearling heifers for sale. These were sired by Sir Parthenea Champion, an outstanding bull of excellent conformation, large size and choice breeding. This bull is also being offered for sale, as Mr. Lorenz has a great many of his daughters in his herd. He is a son of Piebe Champion and is out of Pinehurst Grace, that made an A. R. O. record of approximately 24 pounds of butter in

FOR SALE AT A BARGAIN—A fine driving mare 8 years old, weight about 1,000 pounds. Colt 9 months old, a natural born pacer. This colt is perfect and is from fast stock. Cutter, buggy, cart, harness, etc., will go with this outfit. (Answer) in care of Wisconsin Farmer.

BERKSHIRE SWINE.

CORTTE'S BERKSHIRES

FEBRUARY and March pigs of either sex for sale. These are sired by Pabst Rivalcer 3d—King of Rivals, well grown. Good prospects for next fall show rings. Reasonable prices on singles, pairs or trios. Address
A. P. CORTTE LOMIRA, WISCONSIN

RICHLY BRED BERKSHIRES

A CHOICE lot of June boars of best breeding at little more than pork prices. Can spare a few gilts of same age. Booking orders for March pigs. For prices write, O. R. Frauenheim, Random Lake, Wisconsin.

The Farmer's Concrete Mixer
SHELDON Batch Mixer Price $11.50 Up

The Sheldon was designed especially for the farm. Highly praised by users. Farmers everywhere call it the ideal mixer. Used today all over the United States. A big success. Small enough to be easily moved—big enough to keep 6 men busy. Low in price. Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer.

Read What These Sheldon Owners Say

I and my hired man laid a feeding floor for my hogs, 24x24, in one day; also put floor in my cow barn. My neighbor liked it so well I am not able to keep it at home.—ANDREW CHRISTENSEN, Hancock, Minn., Rt. 1.

We have used the mixer during past year for putting in cement foundations for a complete set of farm buildings, including silo, and likeit very much.—DANA WRIGHT, Jamestown, N. D.

Last year I bought a cement mixer from you with which I am well satisfied. It did not take long for it to pay for itself and I surely can recommend it to anyone needing a *big mixer at a small price*.—WM. PARKS, Martinton, Ill.

I am more than busy with my Sheldon Concrete Mixer. Have more work than I can do. *I get $10 a day when I work out*.—JESSE L. WITTER, Wellsville, N. Y.

The machine works fine. Have already *got the job* of mixing concrete for the bridges in this township.—JOHN ROSE Spartansburg, Pennsylvania.

Last spring we purchased of you a set of castings to make a concrete mixer. It was constructed per the plans furnished and it *surely worked great*.—D. M. BAUPARER, Freeport, Ill.

FREE PLANS

Make your own concrete mixer. You can do it at a cost so low you can not afford to mix concrete by the shovel method. Along with our iron parts we send Free Plans and permit for making your own machine. A good way to get a practical mixer at a small expense. Or, we will sell you the complete machine, ready built.

Make Big Money at Concreting

If you buy a Sheldon Mixer for your own use, you can make many times its cost in a season by renting it to your neighbors. Or, if you want to go out with the mixer on contracts, you can easily earn $8 to $20 a day. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time.

Write For Our New FREE Catalog

Shows our full line of mixers which are sold direct to you on strong guarantee. *Thirty days trial* privilege. No other like it. Patented. Two styles, hand and power. Mixes 2 1-2 cubic feet at a batch. One man can operate it, but it will keep 2, 3, 4, 5 or 6 men busy. Continuous chain drive. Tilting dump. Easily and quickly moved. All parts guaranteed. Does work equal to $400 mixers. Be sure to get the catalog. Write today.

My New Special Offer

I want to tell you about my co-operative plan by which you can get my time-tried, thoroughly proven Sheldon Batch Concrete Mixer at little or no cost to you. I want ten men in every county to accept my special co-operative offer right now. Are you going to be one of the ten? Write and say: "Send me special offer."

The Sheldon will pay for itself on first small jobs. Takes the back-ache out of concrete. Makes possible those many small improvements that add so much to the value of your land.

SHELDON MANUFACTURING COMPANY, Box 5703 Neiawka, Neb.

STOP FEEDING $1.00 CORN TO WORMS

If you SAW thieves robbing you of wagon loads of your $1.00 corn, you'd stop them quick! But, right now UNSEEN thieves—thousands of them—are not only stealing your feed, but imperiling the very lives of your animals. I refer to the feed-eating, blood-sucking, disease-breeding worms. I'll show you how to rid your animals of these expensive pests; how to STOP the feed loss and have thrifty, healthy, profitable live stock. I'll show you how to do it with

A Great Sale of Percheron Horses

Complete Dispersion of Two Great Percheron Studs

Wednesday, March 21, 1917, at the State Fair Grounds, Milwaukee, Wis.

60 Head Comprising the Studs of Louis Lewellin and Sons, Waterloo, Wisconsin, Lewis P. Sutter, Delavan, Wisconsin

THE L. P. SUTTER OFFERING

CONSISTS of a high-class lot of imported stallions and mares. These horses were personally selected in the famous Percheron horse breeding districts of France and imported by Mr. Sutter in 1914 for his own private stud purposes at Delavan, Wisconsin. The stallions are coming four and five. They are the big, ton kind with tremendous bone and substance. The mares are coming four, and under. Only two over five. They include a nice lot of big, drafty animals. The colts in the sale will show the kind they are capable of producing. It's an exceptional opportunity to buy imported Percheron stock, very little of which is now on the American market. By all means come and look them over on sale day. You will find something to suit your wants. Don't miss the sale.

THE LEWELLIN & SONS' OFFERING

THIS offering consists of a grandly bred lot of home bred stallions and mares, the result of years of careful selection and mating at the Lewellin Percheron studs at Waterloo, Wisconsin. Also two grand imported mares. This offering requires no introduction to the Wisconsin horse breeding public. Its frequent appearance and successes at the Wisconsin State Fair have made it well known to every horseman in the state. In 1915 and 1916 it won the Wisconsin bred and owned championship on stallions, and also on mares; and in 1915 the championship on mares in the open to the world classes. Besides these, it has won many first and second prizes both in singles and groups. All of these prize-winning mares, stallions and colts are included in this sale offering. They are proven quality and regular producing stock.

Helps For Farm Women.

(Continued from page 16.)

has taken care of that. In actual tests it has been found that the person doing the cooking walks less than a mile a week during the preparation of the twenty-one full meals for four persons. The whole secret lies in its arrangement. From the picture it is evident that with the stove on the right hand and the sink on the opposite side, with a table in front containing the spices and with the cereals and flavors on the shelves above, all running to and fro between pantry and kitchen table, between stove and sink, is almost eliminated. The sink is adjusted to the height of the worker in that the bottom of the sink can be touched without stooping. This eliminates the backaches incident to working where constant bending is necessary.

In the basement the laundry is located, fitted out with the labor-saving devices. An electric motor drives the washing machine, a reversible ringer and the mangle. The double stationary tubs allow for plenty of water with which to give the clothes adequate rinsing. An electric iron and a free swinging, adjustable ironing board complete the equipment. Having a laundry in the basement, though desirable, is not practical on most farms because of insufficient drainage.

In the arrangement of the rooms the decorations are chosen according to the principles taught in the classroom. Simplicity is the keynote. There is no overcrowding of the walls or floors. The furniture, while good, is not out of tune with the general plan.

Upstairs are the three bedrooms. This arrangement, likewise, is of the simplest and in accordance with the conditions likely to be found in a household of moderate means only.

This cottage is used by the four-year students in dietetics and household management and each week a group of four girls must plan and serve for a family of four persons three meals a day at a cost of 35 cents per person per day. With no fuel, lighting, water or rent charged, the cost for raw materials amounts to $500 per year.

In the homemakers' schools or home economics short course the program is similar to the work described in connection with the week's course given during Farmers' Week. In order to arrange for such schools and a force of extension workers a list of from seventy-five to 100 signatures must be submitted. The hall where the school is to be held must be arranged for and paid for by the signers and the incidental expenses vouchsafed. There is no charge for the expenses and services of the extension people. At the conclusion of the schools housewives' clubs are encouraged and the essentials of a successful continuation of the home studies are outlined. The club study consists of four main topics --food, clothing, shelter and child welfare. Each topic is divided into subjects as follows:

Outline for Study.—Food: This includes bread, cake, meat—meat substitute—custard, vegetables—starchy, vegetables—succulent.

Clothing: This includes practical house dresses, little touches that make a gown dressy, care of clothing and removal of spots and stains.

Shelter: This includes ice boxes and ice box substitutes, planning a convenient kitchen, methods of putting in running water, devices for the laundry, sleeping porches and table service.

Child Welfare: This includes care of infants, general care and training of children—hygiene of the mouth, nose, throat and skin; colds and their dangers, care of skin, fresh air, care of contagious diseases, need of exercise and play and children's school lunches.

The topics are taken up in rotation so that one subject of each topic has been studied after every four meetings. The clubs have proved their worth in more ways than one.

There are, furthermore, the girls'

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

MR. STALLION BUYER

WE still have on hand a large number of two coming three Percheron stallions, those colts now weigh up to 2,110 pounds, and if you are looking for an outstanding good one to head your herd of mares you should write and get prices on those colts. Our three-year-old and aged Percheron stallions are the best lot w ever had on hand. They weigh up to 2,300 pounds. In Belgians we offer a very strong lot from one to six years old. Among them is Bizarrie, a five-year-old sorrel chestnut stallion weighing 2,300 pounds. This stallion is as good as money can buy and fit to go any place. He must be seen to be appreciated. We have on hand a number of stallions from six to ten years old that have made seasons. Those horses weigh up to 2,100 pounds, and we will sell them very reasonable. We have a horse for every purse and know we can save you money. We want to buy 50 head of one coming two Percheron and Belgian stallions. Write us what you have. Send 25 cents in stamps for large horse hanger. Address

canning club and the mothers' clubs. The canning clubs are well known in the state. They have for their object the encouragement of canning for home consumption such products as the farm offers in excess of the summer needs. Vegetables are healthy and when made from the farm surplus decidedly cheaper than boughten goods. There are sixteen canning clubs now in existence and the number will be increased in the coming year.

The correspondence courses of the university extension division are spreading the light of better farm life for the women. These teach all of the subjects of the regular college home economics course by mail for a small fee necessary to cover expenses. They comprise the family dietary, the child's health, canning and preserving foods, household management, studies for the prospective mother, household management, dressmaking and designing and home furnishing and decoration.

Connected with the university extension division is the package library. This library accommodates by mail and express requests for any agricultural information desired. They gather the necessary references and place it at the disposal of the farmer and his wife. Each package contains the best material available in pamphlets, selected magazine articles, clippings, typewritten excerpts from books and government bulletins. An endless stream of incoming and outgoing packages keep the forces here employed working overtime. In one month nearly a thousand such packages were sent out. Before any package can be shipped all the information on any one subject must be gotten together. One cannot well imagine the many books and magazines that must be read before all the information has been compiled unless one tries it.

Besides all these branches of education there is still the private information service. Requests come in by the hundreds every month to the members of the department for help on many different subjects. But the department has been built up of people who love to work for the betterment of everything in and about the home and they are glad to be able to do more all the time than their regular program calls for. Miss Marlatt spends much of her extra time in assisting people in planning farmhouses or remodeling old homes.

A COMBINATION OF SIZE, IDEAL TYPE AND PERSISTENT PRODUCTION

A 31.02-POUND bull, that comes from a long line of cows of large size, ideal type, heavy-production ability, which are persistent. **Racine Johanna Piebe Mercedes 188460.** Born December 8, 1915. His dam, **Ella Mercedes of Elm Court, made 31.02 pounds of butter in seven days;** 130.47 pounds butter in 28 days (an average of 32.69 pounds butter per week for four weeks); 829.78 pounds butter in a year. She weighs over 1,600 pounds. **His sire's dam** made 27.70 **pounds butter in seven days; 808.82** pounds butter in a year and weighs close to 1,600 pounds. His dam's dam, sisters and his parents' sisters are big cows of good type and heavy producers. Come to our farm and see them—and see the kind of cows his daughters will develop into. Am also offering a straight and well-grown yearling heifer out of Lady Johanna of Elm Court and sired by Count of the Pontiacs.

HOLSTEIN-FRIESIAN CATTLE.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. **WAUKESHA, WISCONSIN**

HOLSTEINS FOR SALE

MEQUON FARM offers Holstein bull calves sired by a 23-lb. grandson of King of the Pontiacs, out of high-testing cows, at very reasonable prices. One bull ready for service. Address

C. F. DINEEN, CEDARBURG, WISCONSIN

REGISTERED HOLSTEIN BULL

AND heifer calves sired by Pabst Canary Pontiac Champion 142885, and out of well-bred heavy-producing cows. Call and see our herd or write

WM. FENNER, SHEBOYGAN FALLS, WIS.

REG. HOLSTEIN BULLS

SIRED by Cedarlawn Champion 3d, whose two nearest dams average almost 24 pounds butter in 7 days with first calf. One bull out of a granddaughter of Sir Johanna De Kol, sire of the 40-pound cow, Johanna De Kol Van Beers. Address

Fred Kohlwey **Grafton, Wisconsin**

HOLSTEIN

BULL calves, sired by Johanna Bonheur Pieter 113138, whose 14 nearest dams average over 27 pounds butter in 7 days, out of dams with 7 day and yearly records. C. Teckterman Jr., Monroe, Wisconsin.

Purebred Registered

HOLSTEIN CATTLE

The highest prices ever paid in the St. Paul yards for a cow or a bull for beef were paid within a year for Holsteins. Two grade Holstein cows 13 years old brought $187, one 12 year old registered Holstein cow $116, and a registered 4 year old Holstein bull $168.00. In considering Holstein cattle as a dual purpose breed, the above authentic facts render further comment unnecessary. There is big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America

F. HOUGHTON, Sec'y Box 165, Brattleboro, Vt.

HIGH grade Guernsey and Holstein calves, 2 to 3 weeks old, $20. Crated to ship anywhere. 31.32 pure. Chas. Blott, Mukwonago, Wis.

RED POLLED CATTLE.

RED POLLS

YOUNG bulls for sale. My herd bull is a son of J. D. Diana 2d Proctor 23929. Write your Wants. Address L. C. Underwood, Avoca, Wis.

HEADQUARTERS FOR

Red Polled Cattle

THE Dual Purpose Kind. Have for sale bull calves, 3 to 6 months old. Can spare heifers

J. W. SALTER & SONS - **UNITY, WIS.**

RED Polled bulls. Eight choice bulls from calves to yearlings, all sired by a first prize International bull, Liza Lad 23108. His dam has A. R. record, av. 515 lbs fat. Price $75 to $150. Also a few females. Byron R. Curran, Taylor, Wis.

RED POLLED CATTLE

A FEW nice young bulls and heifers for sale. Address WM. WULFF, Grafton, Wisconsin.

RED Polled cattle for sale, both sex and different ages, also Poland China hogs, prices right. Cloverbelt Stock Farm, Hamburg, Wis.

GALLOWAY CATTLE.

30 GALLOWAY bulls for sale, 14 to 18 months of age, sired by Standard, Favorite and Stanley's Othello. Also cows and heifers and Oxford rams for sale. C. S. Hechtner, Chariton, Iowa

POLLED DURHAM CATTLE.

POLLED DURHAM CATTLE Registered bulls for sale from 2 to 8 months of age. Address Ph. Lang, West Bend, Wisconsin.

How Mitchells Differ

Because of What John W. Bate Has Done

Hundreds of Extras

Factory efficiency has been made a fine art in this plant. John W. Bate, our efficiency engineer, has spent millions to attain it.

This entire plant, covering 45 acres, was built and equipped to secure it. Now our new body plant completes it. We urge you to learn where these tremendous savings show in extra value.

For a Lifetime Car

Part of this saving pays for 100 per cent over-strength. Our margin of safety used to be 50 per cent. It has now been doubled.

Steering parts, gears, axles, etc., are made oversize. Our rear springs are built so that, in two years, not a single spring has broken.

Over 440 parts are built of toughened steel. Parts which get a major strain are built of Chrome-Vanadium. The steel in Mitchells costs us up to 15 cents per pound. And we do not skimp on weight.

The result is safety, freedom from repairs and troubles. And a car which probably will serve men for a lifetime. Time will prove, we believe, that this double strength is worth half the price of the car.

$4,000,000 in Extras

There are 31 extra features in Mitchells, most of them exclusive. On this year's output these extras cost us about $4,000,000.

They are things like a power tire pump, an easy control, a ball-bearing steering gear, engine primer on the dashboard, a light in the tonneau, a locked compartment, etc

Every one is a wanted feature. Yet they are impossible, at a modest price, without Mitchell factory efficiency.

Extras in Luxury

The Mitchell has long been considered by experts one of the handsomest cars on the street. The output is largely sold in metropolitan centers.

Yet this year we have added 24 per cent to the cost of finish, upholstery and trimming. We are giving you heat-fixed finish, extra-grade leather, and scores of new dainty touches.

TWO SIZES

Mitchell —a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.
Price $1460, f. o. b. Racine

Mitchell Junior —a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.
Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

All this results from another economy. We now occupy our new body plant. All Mitchell bodies, open and closed, are built here now, under Bate efficiency methods. And this added luxury clearly shows the result.

What So Important?

What else is so important?

Extra values like these, without extra price, come only through efficiency. Under other methods, all these values are wasted in the shop.

Mitchell stands unique among fine cars in respect to efficiency. For a dozen years John W. Bate has worked here to attain it. Go to your Mitchell dealer and see the results. Compare it with cars built otherwise. If you can, take an engineer with you, and we will abide by his verdict.

$1150 Mitchell Junior

Note that this year's line includes two sizes—the Mitchell and the Mitchell Junior. But the Mitchell Junior—for five passengers—is still powerful and roomy.

This is also for efficiency. So the man who wants a 5-passenger car need not pay for more power or more room than he needs.

THE WISCONSIN FARMER

VOL. XLVI. NO. 11. THURSDAY, MARCH 15 1917. WHOLE NO. 1833

Reading Room of A. Urbana Ill.

Ten Years' Success With Guernseys.

WHEREVER Guernsey breeders thrive the name of Fox Bros., of Waukesha, Wis., is known. The brothers, Frank and Al, have only been in the business ten years, but in this short period they have built up a herd which has both show-ring and production records to its credit. It is a wonderful demonstration of what energy and intelligence can accomplish. Located about a mile from the city of Waukesha in the county of the same name, the 300 acres of the farm are an excellent location for the establishment of a dairy herd. The Fox Bros. realized this when they took over the interest of S. A. Fox, their father, quite a few years ago. Frank runs the half nearest the city and Al the 150 acres on the other end. It was only natural that at first they should continue in the way of Fox, Senior, and milk cows which had no especial breeding and of whose profit-producing powers they had no conception. An experiment with a grade cow, however, soon showed them the advantage of breeding for a special type of dairy animal. As a consequence a visit to the National Dairy Show at Chicago was made in 1907 and four cows of the Guernsey breed purchased. These cows gave such splendid results during the year 1907 to 1908 that there remained no doubt in the minds of the brothers of the superiority of pure-bred dairy cattle over scrub and grade cows. Several carloads of Guernseys were therefore imported from the east in the following year and these with the first cows and some other purchases formed the foundation of what is known as the Fox Bros. Guernsey herd.

F. E. FOX.

A. W. FOX.

The boys realized at an early date that advertising through proper channels was a sound investment. They used both the farm papers and the show ring to good advantage. The show ring has given them honors and has taught them to believe more firmly than ever in breeding for a proper type of animals. There have been won by animals shown by them more than 500 prizes with no prize lower than fourth place. They have carried away championship after championship at all the leading fairs of the Mississippi valley. Thirty-eight animals have won first prizes and championships and seventy others have collected ribbons from fourth place and up. The brothers have not shown their stock since 1914, but show points are still kept in mind in their breeding operations. Some of the best records on their farm are being made by heifers out of cows that have won premier honors at the fairs. The regular herd consists of 150 head of cattle, though at times this number is exceeded. Four cows have done especially well on the farm and back to these cows trace a great number of the animals now in the herd. One of these was Selma Pinehurst 2d, a cow of larger size, with exceptional dairy type and temperament. She was first-prize cow at the Wisconsin State Fair and at the National Dairy Show in the junior and senior inheritance class in 1913. She has made two advance register records, one at the age of two years, with 430 pounds of butter fat and 7,078 pounds of milk; the other at the age of five years, when she made nearly 500 pounds of butter fat and 8,728.9 pounds of milk. She was sired by Glenwood Boy of Haddon, out of Selma Pinehurst.

Another cow that has an exceptional record in the herd is Essie Jeweler. This cow was first in 1913 in every class but one and was senior and grand champion female in the aged class at four of the seven fairs where she was shown. She was also in the first-prize aged herd at Wisconsin in 1910. Her breeding record is as exceptional as her show-ring record. She produced twelve heifer calves and only one bull calf in fourteen years. A granddaughter of this cow is showing exceptional powers of production. She began a test in October, 1916, and has averaged about two pounds of fat daily and shows every indication of keeping up this record. This would make make her total better than 600 pounds of fat for the season.

The herd was until lately headed by King Talladeen of Chestnut Hill. He was bought when he was only a few weeks old and used extensively in the herd. He took first prize as a yearling bull at the Minnesota and Wisconsin state fairs in 1909 and has won no less than twenty other ribbons in the open classes in the years that followed. He was sired by Skeezicks, that has ten advanced registry daughters and brought at one time a price of $1,000. He was out of the cow, Talladeen, that has a record of 11,907 pounds of milk and 635.2 pounds of butter fat and several tested daughters with large records.

Another one of the herd bulls is Benton's May King of Ingleside, that is a grandson of Imperial King of the May, whose dam has a record of 632 pounds of fat and 12,024 pounds of milk. She in turn is a dam of Dolly Bloom, with 16,507 pounds of milk and 816 pounds of fat. Dolly Bloom is the mother of Dolly Dimple, the famous heifer whose record as a two year old of 705 pounds of fat and 14,009 pounds of milk has been surpassed only by Cherry of Edgewater. On the dam's side this herd sire has Benton's Lady with 13,305.1 pounds

(Concluded on page 8.)

First-prize young herd at the 1914 National Show. These cows were all caught in the quarantine and passed through the crisis successfully. They are all on the farm of F. E. Fox. The third one in the line is Dairymaid of Waukesha, one of the best cows ever produced on the place.

4 H.P.—190 lbs.

The 4 H. P. Cushman Handy Truck is the most useful outfit ever built for farm work. Engine weighs only 190 lbs., and entire outfit only 375 lbs.

Besides doing all farm and household jobs, this 4 H. P. Cushman may be lifted from truck and hung on rear of binder during harvest to save a team. In wet weather it saves the crop.

Light Weight Cushman Engines

Built for farmers who need an engine to do many jobs in many places instead of one job in one place. Throttle Governed, with Schebler Carburetor. Run very quietly and steadily—not with violent explosions and fast and slow speeds like old-style heavy-weights. Engine Book free.

CUSHMAN MOTOR WORKS
855 N. 21st Street Lincoln, Nebraska

8 H.P.—320 lbs.

Columbia Batteries

From bells to blasting, and toys to tractors—the battery of day-in and day-out, all-the-time *service* is Columbia.

National Carbon Co
Cleveland, Ohio

Fahnestock spring-clip binding posts, no extra charge.

E-B PLANTER

Gauge shoe on the runner insures even depth of planting—increases the yield. Edge drop—accurate—no slips even at high speed. Automatic as hill or drill drop. Foot lever control of runners. E-B Corn Planters are one of the many implements in the E-B line. Ask your dealer. Look for the E-B trade mark on the implements you buy. It's our pledge and your guide to quality.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments Diagnosed and Remedies Suggested in this Department.

Questions and Answers.

Sal Ammoniac Solution.

How can one make the sal ammoniac solution for a wet battery as you suggested in your issue of January 25th? What parts do you mix? Would this kind of a battery do to run a gas engine with? How many would it take to run a six-horse engine so as to last? What is the difference between connecting in parallel and in multiple series?

Answer.—The solution is made by dissolving sal ammoniac in water. An exact proportion is not required. A good solution may be made by dissolving as much sal ammoniac as possible in a pint of water and then add three pints of water. If the dry cells are not too badly worn out six cells in this solution should be sufficient to operate an engine for some time. The outside pasteboard cover must be removed from the cells and several small holes punched in the zinc can so that the solution can soak into the inside of the cells. The cells should be placed in glass jars containing enough of the solution to come up within an inch of the top of the cells.

Six cells in parallel, when new, will produce a current of 1.5 volts and deliver a continuous current of 2.1 amperes. The same cells if connected in series would deliver a continuous current of .35 amperes at nine volts. Connected in series-multiple, two in a series, the continuous amperage would be about 1.05 amperes and the voltage three volts. Connected in series-multiple, three in a series, the continuous amperage would be about .7 and the voltage four and one-half volts. When cells are connected in series the carbon of one is connected to the zinc of the next. When connected in multiple all the carbon terminals are connected to one wire and all the zincs to the other. Series-multiple is a combination of the two.

Changing Two-Cylinder Engine.

I have a two-cylinder Rambler auto engine. I would like to know whether I can make a one-cylinder engine out of it. It has the flywheel on the side. Would I have to balance it on one side?

Answer.—You would have a better balanced engine if you leave both cylinders just as they are, closing up the intake of the cylinder you do not wish to use. A single cylinder engine cannot be balanced as perfectly as a two-cylinder engine. If you disconnect one cylinder you will need to rebalance the flywheel, making the side opposite the crank heavy enough to balance the action of the piston and connecting rod. The amount of weight that should be added would have to be found by experiment. This can best be done by drilling and tapping some holes in the side of the flywheel rim and fastening washers to the rim by cap screws.

Four-Cylinder Magneto on Single-Cylinder Engine.

Can a Splitdorf high-tension magneto be installed on an Olds gasoline engine having jump spark ignition?

Answer.—It can. Connect the magneto to the engine by gears or a chain so that the magneto armature runs at crankshaft speed. It must be connected so that the breaker contact points open just after the end of the compression stroke. With the engine in that position, remove the distributor cover of the magneto and note the position of the distributor brush. Connect the high-tension terminal with which the distributor brush is in contact to the spark plug. Ground the other three high-tension terminals on the engine frame.

Ascending and Descending Hills.

I have a new Ford car and it is not equipped with any batteries. In descending hills, is it not a good method to push the clutch pedal into neutral at the same time with the brake pedal? If so, should the spark and throttle levers be fully retarded? As soon as I have descended the hill, could I not let the clutch pedal back into high again when releasing the brake pedal without stalling the car? In ascending the hills, how far should the spark lever be advanced on low gear?

Answer.—The following instructions for driving down hill are given by the Ford Company:

In driving down long, steep hills the speed of the car may be checked by allowing the engine to run against compression, rather than by using the transmission brake. Throw off the switch and close the throttle. If this does not slow down the car sufficiently, throw the clutch into low speed. Upon reaching the bottom of the incline throw on the switch again and open the throttle. If the throttle is left open while descending the hill the fresh gas is apt to work back through the exhaust pipe and cause an explosion in the muffler when the switch is thrown on. Using the engine as a brake should not be attempted until the driver becomes familiar with the car, however.

In ascending a hill place the spark lever in such a position that the engine has the greatest power. This can only be found by experiment.

Carbon Prevention—Gasoline Economy.

What is the best preparation to put into an automobile engine to prevent carbon from forming? What make of car of the same horse power uses the least gasoline per mile?

Answer.—The best carbon preventive is a good set of piston rings and a proper regulation of the oil supply. Carbon is usually caused by the oil working up past the rings. This may be due to poor rings; too high an oil level in the crankcase, where the splash system is used, or too much pressure and poor-fitting bearings where forced feed is used. Carbon may also be due to too rich a gasoline mixture. In any case, an ounce of prevention is worth a pound of cure. There are some compounds on the market that claim to prevent carbon if used with the gasoline, but we have never tried them.

It would be impossible to say which car has the best fuel economy on account of the different weights and horse powers of the cars. Much depends upon the adjustment of the carburetor, the timing of the spark and the judgment used by the driver in controlling his spark and throttle.

It Can't be Clogged

The Moline Line Includes

Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers, Manure Spreaders, Mowers, Plows (chilled and steel), Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Vehicles, Wagons.

For 60 years, Moline-Adriance Mowers have been cutting grass in all parts of the world. Especially in remote lands—far from a source of repairs—are Moline-Adriance Mowers famous for enduring, satisfactory service. They are the mowers you will like.

Knives start instantly—can't clog.

Flexible Cutter bar follows the ground closely—cuts an even stubble on uneven ground.

High wheels, exposed driving pawls and ratchets, long wearing, easy running gears, automatic spring draft, correct balance and easy riding are features you'll appreciate.

Ask your Moline dealer to show you this mower or write us for illustrated literature.

MOLINE PLOW CO., MOLINE, ILL. DEPT. 30

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before you buy a manure spreader (gasoline engine, cream separator or tractor) of any make, or kind, or price, first get Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer manure spreaders, engines, separators direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a manure spreader or any of the other Galloway lines until you first get our prices and our proposition. Get my prices before you buy!

UNDENIABLE PROOF!

I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125. Geo. A. Kralik, Okla. City, Okla.

I consider it equal to a prominent machine sold for $140. One neighbor who has used both says he would rather have the Galloway. W. C. Cracraft, Eckley, Colo.

I saved $39. Believe I got a better spreader than was offered me here for $135. A. T. Miller, Orella, Neb.

It is as good a spreader as money can buy. I kept $35.43 in my own pocket. A team that weighs 1,850 lbs. pulls it easily. W. H. Adams, Pound, Wis.

THE WM. GALLOWAY CO., 80 Galloway Sta., Waterloo, Iowa

A ROLLER-FEED MILL

WILL GRIND A WAGON LOAD OF FEED FOR 10 CENTS.

THIS is the **Famous Howell Roller Mill** you have heard so much talk about. The new improved mill for the scientific grinding of grain. Old style Burr and Stone Mills are out of date. Thousands of them are being annually replaced by the Famous Howell Roller Mills. Grind twice as fast as the best burr mill made. Does not heat the feed. Grinds Graham and Rye flour as well as feed. Has big capacity. Requires little power. No burrs or stones to wear out. Guaranteed to last a life time. Made in 13 sizes suitable for any size engine. Save one-half your time, gasolene and money by using a Howell Roller Mill. Write for Catalog F-16. We will send it free, together with the **Famous Howell Roller Feed Mill Puzzle.**

R. R. HOWELL & CO., Manufacturers, Minneapolis, Minn.

All garage and repair men can give you immediate service. If you have any difficulty getting them, write us. We'll see you are supplied.

Send for Free Booklet

"To Have and to Hold Power." You need it.

McQuay-Norris Mfg. Co.
2820 Locust St., St. Louis, Mo.

Money In Your Ideas

C & C PATENTS PROTECT THEM FOR YOU

Books "What to Invent" and "How to Obtain a Patent" sent free. Send rough sketch for **free** report regarding patentability. A C & C patent on your idea today may mean independence tomorrow. Manufacturers constantly writing us to buy patents. Patents advertised for sale at our expense.

CHANDLEE & CHANDLEE, Patent Attorneys Est. 21 Years. 1140F Street, Washington, D. C.

Fine Grinding

Letz Feed Mills grind ear corn, snapped corn, oats, wheat, rye, alfalfa, kafir corn with stalk, oven oat hulls. Self-sharpening, silent running, self-aligning. Ten days free trial. Book free.

LETZ MFG. CO.
208 East St., - Crown Point, Ind.

The Wisconsin Farmer

THURSDAY, MARCH 15, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

A NONPARTISAN WISCONSIN FARMERS' ORGANIZATION.

AS I READ the call issued recently by the stockholders of the Farmers' Co-operative Packing Company for a meeting of Wisconsin farmers at Marshfield on March 22d, for the purpose of organizing a nonpartisan political league, I was reminded at once of what Abraham Lincoln said to an audience of Wisconsin farmers in 1859. Referring to the importance of good government to the farmers of such an agricultural state as this, he said:

> Farmers as a class are neither better nor worse than other people, but their interest is the largest interest. It also follows that that interest is the most worthy of all to be cherished and cultivated and if there be inevitable conflict between that interest and any other, the other should yield.

It was one of the evidences of Lincoln's greatness that the sentiments which he uttered were true, not only for his own day and generation, but for all time to come, because they were based on fundamental principles and eternal verities which do not change. And in nothing did he speak more truly than in the words given above.

In a state like Wisconsin, where agricultural interests are paramount and 57 per cent of the population is listed by the federal census as rural in character, the farmers should always exert themselves along political, though never along narrow, partisan lines. They are the largest stockholders in the largest business institution in the Badger state, which is the state government itself, and it is directly to their advantage to exercise the influence and power which they possess by co-operating in a spirit of harmony for the common cause.

From a purely dollars-and-cents standpoint it will pay them, because it is just as important in arriving at a balance on the right side of the ledger at the end of the year, that the public funds, to which they are the largest contributors, be handled economically, honestly and efficiently, as that their acres be made to produce a little more and their live stock earn them a little larger profits. But there is a matter involved over and beyond that of dollars and cents, and that is the question of public morals and the example which the public servants set to the rising generation of Wisconsin farm boys.

The heart of any agricultural community is sound on public matters which it once grasps. The farmers of Wisconsin are capable of solving the questions of public policy along right lines, and they have the patriotism to do so. All that is needed is to arouse their interest, to give them the information, and when they once grasp the equities of any proposition, they will hold on like grim death and fight it out along those lines, if it takes all summer and all winter, too.

That is why I rejoice at this movement to arouse greater interest and activity among the farmers of this state along nonpartisan lines. Lack of organization among the farmers for the promotion of unified action is always the main reliance of those whose aims and efforts are opposed to the vast agricultural interests of this and other grain-belt states. The powers that prey on the farmer's divisions and prejudices never sleep, and it takes some great issue, like the granger movement of the seventies, to arouse the farmers to a realization of their influence in bringing about good government.

Nor is this present movement confined to Wisconsin. It is sweeping across the grain-belt states with all the fervor of a religious revival and upsetting old political alignments, as it ushers in a new order of things. In North Dakota it has completely smashed an old and corrupt political machine by electing the farmers' nonpartisan candidate for governor, and other state officers, controlling the legislature and writing its views into the state platform. The farmers of North Dakota are in the saddle and they will not be easily replaced. The movement spread from North Dakota to Minnesota, and there it is causing much fear and trembling in the seats of the mighty, as the politicians contemplate the future. In Iowa a similar organization of embattled farmers played a big part in the last state campaign, electing many officials and having great influence on party policies. Now, Wisconsin is beginning to feel the stirrings of this farmer's nonpartisan political movement, and the end is not yet.

The Wisconsin Farmer believes that the thoughts and hopes of Wisconsin farmers should be centered in the gathering at Marshfield on March 22d, and that just as many as possible should plan to be present and join in the discussions and the actions of the meeting. There is no state in the Union where the farmers are better organized for social and economic advancement than Wisconsin, and it is fitting that they should also be united for political progress, along nonpartisan lines. The experience of neighboring states demonstrates that in the idea is sufficient political dynamite to rock the Badger state from one end to the other, and to compel any interest which comes into inevitable conflict with the farmers' interest to yield, even as the martyred president advised a Wisconsin agricultural gathering over half a century ago.

A BRIGHT OUTLOOK FOR WISCONSIN FARMERS.

SELDOM have we, in Wisconsin, passed through a more severe winter than the one just closing. Not only have extremely low temperatures frequently prevailed, but there has been an unusually large amount of snow, the fall ranging from twelve to fifty inches at times. Several of the storms have been among the worst on record, recalling the historic winter of 1863-4 and the New Year's Day blizzard of 1864, which is still regarded as the worst day within the memory of the oldest Wisconsin inhabitant.

But far from being the proverbial ill wind that blows nobody good, the severity of the winter just passed has in some respects been a decided blessing, lending hope and encouragement for the coming season. It is an old adage that "a good crop follows a hard winter." Whether or not there is any scientific connection between the winter's cold and the summer's crops I do not know, but it is certain that a season of abundant snowfall is of great benefit. Snow is a good protection for grains and grasses against winterkilling; from it spring moisture is obtained that means early grass; it also contains some ammonia that is of value in adding nitrogen to the soil.

All that it is necessary for us to do here in Wisconsin is to put ourselves in position to take advantage of present conditions and to make the most of what a bountiful nature has done for us. Making hay while the sun shines is a policy that commends itself to every far-sighted business man, and I advise my readers to bend all their physical and mental energies to making the most of this year of grace 1917. It should be a year of heavy crop production, of mortgage clearing, of better stock raising, and of more intensive farming. Wisconsin has set a high mark in former years to aim at, but 1917 should, and I confidently believe will, be the very best of them all. Nature has done her part this winter. Let us, each one of us, do ours until another winter rolls around.

WOULD NOT BE WITHOUT WISCONSIN FARMER.

ONE of the valued subscribers of The Wisconsin Farmer is Albert W. Komis, of Clark county, who has written to me as follows:

> Dear Mr. Pierce:—I am sending in my renewal, in response to your offer. I would not be without The Wisconsin Farmer at any price. I am renting a farm of 120 acres at present, with twenty milk cows on the farm and farm machinery. I furnish the horses. The winter with us here in Clark county has been very cold. Stock is doing fine, notwithstanding the cold weather. Feed is plentiful. Butter sells for thirty-nine cents a pound; cheese, twenty-two cents; eggs, thirty-two cents a dozen, and I have received $2.86 per 100 pounds for my milk, this price being paid to me by the J. Nuetrish Cheese Factory.

Who said anything about a hard winter up-state this year? Of course, it has been cold at times, and there have been some heavy snows. Train service has been good, except during a couple of storms, and factories have been able to ship away their butter and cheese and get the cash. What would the farmers of a few years ago think of $2.86 per hundred pounds for whole milk? I am especially glad to note Mr. Komis contradicts some reports about scarcity of feed. There is plenty of feed in his neighborhood, he says, and I am inclined to believe that it will be a pretty rare day, indeed, when good old Clark county is unable to furnish plenty of feed for her dairy cattle. I have seen some pretty good corn produced in Clark county and am convinced that corn can profitably be raised there.

Here's hoping the heavy snows of the past winter will help put Mr. Komis' soil, and that of his neighbors in Clark county, in good shape for a wonderful harvest in 1917. The soil and dairy cattle in Clark county ought to produce a big pile of money at present prices for agricultural and dairy products.

THE LOYALTY OF WISCONSIN'S ADOPTED SONS.

THESE are moments of great national stress. We confront a crisis the far-reaching magnitude and importance of which few among us realize. Its shadow hangs low over the farms of our fair state of Wisconsin fully as much as over the factories of New England or the mines of the Rocky mountains. At such a time we are all Americans, no matter what our geographical location, no matter what our individual situation.

One thing impresses me above all else in the situation as it exists today. That one thing is just this: The true-blue patriotism of the people from across the seas who have come to Wisconsin, Minnesota and the Dakotas to become real Americans. There is no wavering among them. They have been through the melting pot and have come forth refined gold. They went in as Germans, Austrians, Scandinavians, all manner of nationalities; they came out one people: Americans. Among them are men and women of widely varying walks in life. Some till their little handful of acres in a meager manner, being like the immigrant-farmer in northern Wisconsin, whose letter I gave you for a New Year's message, who, instead of riding in an automobile, is well content with his wooden wheelbarrow. Others see their far-flung acres stretching clear to the horizon and the golden wheat billowing, around harvest time, like a veritable sea of gold. But no matter what their financial or social standing, all unite in being one thing: Honest, loyal, patriotic Americans.

This thought has come to me a great many times lately as I have read the hundreds of letters from subscribers which pour into the office of The Wisconsin Farmer every week. I decided to pass it on to you when I read the following letter from one of my subscribers, Mr. Albert Enzmann, of Ray, Minnesota, secretary of the Ray Farmers' Club. Here is a letter which makes us, who are native born, thrill with pride for the men and women who have come from across the seas to stand shoulder to shoulder with us in our present national crisis. Mr. Enzmann writes me as follows:

> My dear Mr. Pierce: Enclosed herewith find my check for another year's subscription to The Wisconsin Farmer. I wouldn't think of being without your paper for twice the amount you ask for it.
>
> Having been born and raised in Germany I have naturally sympathized with that country during this terrible war, and it made my heart ache when I read some of the editorials of the daily newspapers and farm magazines in their efforts to prejudice their readers against Germany. It was then I noticed with satisfaction that The Wisconsin Farmer was the only true neutral publication which came to my eyes, not excepting the German papers, of which I read several. In spite of the fact that I didn't approve of the action of our government in the beginning of the war, to allow the exportation of arms and ammunition to the belligerents, I am ashamed now of my action in not supporting Mr. Wilson for re-election last fall. I am further ashamed of the fact that I attributed the president's actions to selfish reasons only, which I now know to be far from the truth. There is no man whom I would rather see at the head of this nation today than Mr. Wilson, as I know if he cannot prevent war with Germany honorably no one can.
>
> I have perhaps more reason to be thankful to this country for what it has done for me than the average emigrant, as I landed here from one of the interned auxiliary cruisers, when she was making regular peaceful trips across the ocean, with 67 cents in my pockets. But should the president decide that the rupture cannot be prevented, I don't think there will be a citizen of German blood disloyal to the Stars and Stripes. Yours very truly,
>
> ALBERT ENZMANN.

Is there not an example set here for all of us by this transplanted farmer, who is now neither German nor German-American, but all American? I am not asking you to be for any man or against him, for any policy or against it. I am simply asking that you be a true-blue American and give to your country the full measure of your patriotic loyalty. This full measure need not consist in carrying a musket—I pray God it may never be this. It may consist merely in making your fields yield abundantly and your herds multiply prolifically, so that the world may be fed and clothed. But wherever duty calls any of us, in such a crisis as this today, may we all face it with as shining a face, as loyal a heart and as unconquerable a spirit as this Wisconsin Farmer reader, who was German, but is now American.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer — Madison, Wis.

Wisconsin Feeding Problems.

With the present high cost of feed and no prospect of turning the cows onto pasture for two months at least, Wisconsin dairymen are facing a difficult feeding problem. Cutting down the quantity of feed is not practical, since the greatest profit is made by feeding cows up to their maximum capacity. It reqiures from 40 to 60 per cent of the feed a cow can consume to keep her alive, and that which is over this amount is available for production. Thus it is poor economy to provide a maintenance ration and not furnish the additional feed which she can turn into milk at a profit. The best practice is to allow the cows all the feed they will clean up without gaining in weight.

The heaviest milk production takes place when cows are on grass and the winter feeding problem is largely a matter of getting a combination of feeds to take the place of grass. Succulent feed has a beneficial effect on the digestion of the animal and for this reason silage or root crops, such as mangel-wurzels or carrots, should form an important part of the winter ration. It is a common practice among dairymen to allow the cows all of this feed that they will clean up, which is usually about twenty-five or thirty pounds per head daily, depending, of course, upon the amount of other feeds in the ration. Since silage and root crops are comparatively inexpensive, a liberal feeding of them seems advisable at this time.

Clover and alfalfa are probably the best roughages for cows, because they furnish a liberal supply of nitrogenous material necessary to keep up a good flow of milk. Cowpea hay is also good, but timothy is not so desirable because it is low in nitrogen. No fixed rule can be laid down as to which of these feeds is best to use because conditions vary so much with regard to cost and available supply. Most dairymen will feed whatever dry roughage they have on hand, because it is usually more economical to do so than to buy something else. Since roughage can be grown at less cost than grain it is good feeding practice to include an abundance of it in the ration. In some cases, however, the cost of shipping and handling bulky feed when it has to be purchased makes a relatively larger use of grain more profitable.

With regard to the amount of grain to feed, some dairymen make it a practice to feed one pound of grain daily for every pound of butter fat produced per week. The idea is to allow as much grain as the cow will convert into milk. Another method is to feed one pound of grain per day for every three or four pounds of milk produced.

In this state wheat bran, oats and corn are among the more commonly used concentrates. Cottonseed meal is a good supplement to corn because of its high percentage of nitrogen, but considering both the cost and the effect on the cows, it is not advisable to feed more than three or four pounds of this material per day. The kind of grain on hand and the cost of each kind on the market will determine that which can be fed most profitably, but care must be taken to see that the total ration has sufficient nitrogenous material in proportion to its starch and fat or oil content. If a good supply of clover or alfalfa hay is included in the ration, there is apt to be little trouble in this respect.

Good care and stabling of the cows, plenty of salt and fresh water of the right temperature and regularity in feeding are also factors in milk production that cannot be overlooked at this time when every effort is being made to keep profits above the high cost of feeding.

Wisconsin Farm Names.

The Wisconsin Farmer is in receipt of a letter from Harry Setz, Jefferson county, Wisconsin, asking for suggestions for farm names. Inasmuch as spring and summer improvements will soon begin and many of our readers will want to take advantage of the new law to adopt farm names, we have decided to republish a list which was given in The Wisconsin Farmer about two years ago. The following is the list:

FARMS WHICH OVERLOOK LAKES VALLEYS, STREAMS, ETC.	
Lakeview Farm	Grandview Farm
Valley View Farm	River View Farm
Brook View Farm	Overlook Farm
Village View Farm	Riverdale Farm
Lake Overlook Farm	LaBelle Lake View Farm
Lakeside Farm	White Birch View Farm
Greenview Farm	Hillview Farm
City View Farm	Pleasant Hill Farm
Maple Grove View Farm	Cedar View Farm
Elmhill Farm	Brookside Farm
Fairview Farm	Brook Farm
FARMS DISTINGUISHED BY GROVES, LOCATED ON HILLS, ETC.	
Airy Knoll Farm	Hill Croft Farm
Springdale Farm	The Alps Farm
Elmgrove Farm	Prairie View Farm
Burr Oaks Farm	Maple Wood Farm
Sunny Slope Farm	Wildwood Farm
Rocky Ridge Farm	Chicken Ridge Farm
Maple Lane Farm	Elmwood Farm
Pleasant Point Farm	Lone Oak Farm
Royal Oaks Farm	The Maples
Oak Grove Farm	Pleasant Knoll Farm
Honeywood Farm	Long View Farm
Hillside Farm	Rockhill Farm
Hillcrest Farm	Upland Farm
Point Breeze Farm	Oak Lodge Farm
FARMS WHICH SPECIALIZE	
Shamrock Holstein Farm	Long View Fruit Farm
Ivycrest Stock Farm	Roadside Stock Farm
Happy Home Chicken Farm	Jones' Percheron Farm
Rose Lawn Poultry Farm	Homewood Jersey Farm
Wayside Produce Farm	Fairview Guernsey Farm
Duroc Jersey Farm	Greenview Stock Farm
Cloverleaf Stock Farm	Meadow Lawn Dairy Farm
Happy Hollow Stock Farm	Spring Hurst Swine Farm
Oak Grove Horse Farm	Ideal Dairy Farm
GENERAL FARM NAMES	
Elderberry Park Farm	Homeland Farm
The Everglades Farm	Cedar Lodge Farm
Home View Farm	Rosendale Farm
Park Farm	Fair Acres Farm
Pinehurst Farm	Honeysuckle Park Farm
Bellemont Farm	Cloverdale Farm
Pleasant View Farm	Plain View Farm
Prosperity Farm	Edgewood Farm
Evergreen Heights	Daisy Farm
One Mile Farm	Clover Nook Farm
Fairview Farm	Clover Heights Farm
Pilsen Farm	Quietdale Farm
Allswell Farm	Sweet Brier Farm
Golden Prairie Farm	Waveland Farm

The Wisconsin Farmer will be glad to receive any other suggestions for farm names. Perhaps some of our readers will be able to write us a letter about their farm name and how they happened to select it. In nearly every case there is some sort of an interesting story behind the selection of a farm name.

In Walworth County.

The LaGrange Community Club, of Walworth county, recently entertained the baby beef institute conducted by Mr. W. L. Houser through the coöperation of the Wisconsin Live Stock Breeders' Association. It was a very practical meeting at which important points to be considered in the selection of baby beef were fully discussed. Mr. John Taylor exhibited three calves which were used by the speaker in his demonstrations. These calves were of three distinct types—one of them a splendid baby beef individual, one a splendid typical Short-horn with heavier frame than the other and a good example of the best kind of a two-year-old feeder. The third was an example of a typical dairy steer and carried the points and appearance that made him such. The crowd was quick to note this and received a lasting impression from the demonstration. At the evening program Mr. L. L. Oldham, Walworth county agent, gave an instructive address on alfalfa inoculation and liming.

The baby beef institute is the second big thing which has been arranged this year by the Community Club of LaGrange. On January 27th a public demonstration and post-mortem on tuberculosis in a dairy animal and its relation to the tuberculin test was given by Dr. Eliason, chief of the state veterinary department.

These activities speak well of the possibilities of a community club and its relations to its neighborhood. Particularly is this true when one considers that the LaGrange Club was organized but a short time ago, November 23, 1916.

Walworth county, under the able guidance of the county superintendent of schools and the county agricultural agent, is fast assuming the leadership in the state for community clubs. Fifteen such clubs are now numbered. Among those in the county holding regular monthly meetings four of them conduct their meetings in club houses of their own, erected at an expense of from $5,000 to $8,000. Two others are contemplating building in the spring, the remainder hold their meetings in town halls and the larger of their school buildings. The atmosphere in the county is thoroughly charged with subjects such as "Better live stock," "Better grains," Pay attention to your fertility," "Ventilate and save veterinarian bills," etc. Old and young alike are interested and this is evidenced by the fact that this county led the attendance of the counties of the state with the single exception of Dane county at the 1917 Farmers' Week. A party of some seventy made up the delegation which wore the purple ribbon carrying the aluminum letters as an advertisement for their county and an endorsement of the community club idea.

Using Small Potatoes For Seed.

With present high prices of potatoes the question of seed stock is in many instances a most important one. Undoubtedly many of our readers are in the same position as is one of our subscribers, who asks the following questions:

What do you think of planting small potatoes that were culled from the sale stock last fall? The tubers I have on hand range in size from that of a hen's egg to considerably smaller. Last spring I planted large tubers, so what I now have came from good stock. On account of high prices I don't like to buy a lot of expensive seed. I have enough large tubers to plant two acres from which I can select seed for next year, but I want to plant ten acres more and have enough small tubers for that. While I would not approve of planting cull potatoes every year, I would be glad to have your opinion of using the small ones this year.

In a year like this with potatoes selling at $3.20 a bushel, the retail price here, we would not hesitate to use small or cull tubers for seed if we had them, but, of course, it would be unwise to follow such a practice from year to year. A number of tests might be cited to show that the yield from cull tubers is usually smaller than that from medium size tubers of the same kind. Some years ago, for example, the South Dakota Experiment Station tested out this matter quite thoroughly with the following results: Early Ohio potatoes planted with pieces from tubers averaging about two ounces each yielded 119 bushels per acre, while the same variety planted with pieces from tubers averaging six ounces produced 126 bushels per acre. In the case of Carmen No. 3, plots planted with pieces from tubers weighing two ounces yielded 103 bushels, while the same variety planted with pieces from eight-ounce tubers yielded 108 bushels per acre. Thus the general average was six bushels per acre in favor of the large tubers. In another experiment at the same station, small tubers averaged 174 bushels; medium tubers, 271 bushels; and large tubers, 298 bushels per acre.

Seed potatoes are seldom selected as they should be. Selection should begin in the field during the summer months while the potatoes are growing. One should go through the patch and place a stake by the most vigorous plants before they ripen and while one can examine them carefully. At digging time one should then select the most productive hills of those staked during the growing season and preserve them for seed. This method of selection, carried on for a number of years, has shown a remarkable increase in yielding capacity, especially for the first two years.

One reason why it is not a good plan to select the small tubers for seed is because the weakest hills invariably produce the greatest number of small tubers. In other words, a given number of small potatoes represents a greater number of weak hills than the same weight of potato in the larger sizes. There is always a remarkable difference in the production of individual hills of potatoes in a given field. Sometimes this variation is due to soil conditions, but very often it seems to be due to inheritance. This means that a small tuber from a very productive hill is more desirable for seed purposes than a large one from an unproductive hill.

Renew Before It Is Too Late.

With active farming operations for another season now almost upon us, it behooves every reader to see that he is assured of weekly visits from The Wisconsin Farmer throughout the entire year. The important matter of renewing subscriptions should be attended to before cropping operations make time for letter-writing next to impossible.

We wish to urge upon all our readers that they send in their renewals promptly, so as to insure themselves receiving every copy of The Wisconsin Farmer for the entire year. We wish, moreover, that before the spring work takes up all their time they take a few minutes to inquire among their neighbors as to whether or not they, too, are receiving and reading this paper. If not, a little boost for The Wisconsin Farmer will be a favor to the neighbor and to ourselves and will be the means of making our already large subscription family still larger.

We propose to make The Wisconsin Farmer more practical, entertaining and valuable this year than ever before. Will you do your share by attending to your subscription renewal promptly and securing the subscriptions of as many of your friends and neighbors as you possibly can?

Long-Term Leases Needed

That there is a tenant problem in this country is an admitted fact by everyone who understands the situation. Tenancy is steadily increasing. The 1910 census shows that 37 per cent of the farms in the United States are operated by tenants, 1 per cent by managers and 62 per cent by owners. Tenant farms, however, average smaller in size than the others. In other words, when speaking of acres instead of farms we find that 26 per cent of the land is operated by tenants, 6 per cent by managers and 68 per cent by owners.

It would unquestionably be better for society if all land could be operated by owners, but so long as land has as great a speculative value as it has had in recent years this seems practically impossible. Under our one-year lease system the tendency is for the tenant to mine instead of conserve the fertility of our soils and for that reason it is a bad one. That tenant farms have been losing fertility is not the fault of the tenants, but of the landowners. The reason why tenants are not soil builders is because there is no incentive for them to improve the soil they till or even maintain its present fertility. This is due to the one-year lease system.

A tenant system of land tenure is not necessarily a bad one so far as the conservation of soil is concerned. Of this we have ample proof. Nine-tenths of the land in England is operated by tenants and the fertility of the land has been increasing during the past fifty years. This shows that tenants, as a class, are just as good farmers as landowners, provided there is an incentive for them to become soil builders. Long-time leases prevail in England. A man may lease a farm for ten, fifteen or ninety-nine years. The lease, however, stipulates how the land shall be handled with reference to soil fertility, how often certain fields shall be fertilized and to what extent. Furthermore, if at the end of the lease the farm has been improved—if more fertilizer has been applied than the lease called for—the

tenant obtains a rebate for the value of the extra fertility he has left in the soil.

Such leases encourages the tenant to raise live stock, and it is under this system that English live stock farming has surpassed that of all other countries in the world. This is not intended as a defense of the English system of land tenure, but rather a statement of the facts as they exist in that county. In our opinion they prove that it is up to the landlords in this country to change the present short-term leases and then demand that their land be tilled according to some approved plan that has for its purpose the retention of the soil fertility.

The tenant question is of much greater importance than most people realize and should be given immediate attention. The acre yield of our crops is diminishing and if that continues our civilization cannot last.

Death of Pioneer Wisconsin Farmer.

In the death of George Cook Hill, who died on February 27th, Wisconsin has lost one of its pioneer farmers and builders. He was the kind of man that made Wisconsin great in farming and education.

He was born on a Connecticut farm in 1837. Reared in a Christian home and working on his father's farm he had the simple but healthy ideas formed in his mind, which he later so splendidly developed. He attended district school, but never enjoyed any education higher than this. In 1853 the family moved to Wisconsin, settling in Rosendale, Fond du Lac county. The next year Mr. Hill, at the age of seventeen years, had acquired forty acres upon which he started farming for himself. The high ideals which his outdoor life had given him he followed out on this farm. He early went into improved live stock breeding and was always a ready worker for the elevation of the country's social life. Realizing his need of education he did some private studying with the village minister during the winter months. For twenty-

GEORGE C. HILL.
Pioneer Wisconsin farmer who died recently in Fond du Lac county.

five years he was an active worker in the Rosendale Farmers' Club, which he founded in 1860. He served as officer for this club and through his industry made it of more than local significance. In 1890 he started the Rosendale Guernsey herd in partnership with his son, Charles L. Hill.

For fifteen years Mr. Hill worked for the Wisconsin Farmers' Institute and his speeches and heart-to-heart talks are still remembered by the farmers throughout the state. Ever modest and unassuming, he nevertheless spoke with a conviction that comes from an honest desire to help. Throughout his entire life the model farm and the farm home with comfort was uppermost in his mind. In the sixty-four years he spent on Brook Farm, as he called his place, he has realized in a large part the early ideals to which he adhered unto the last. Nor were his efforts unrecognized. In 1910 the college of agriculture gave him the special recognition which has only been awarded to a limited number of the great men in our state.

Good Lettuce in May.

Good, early lettuce may be had in any quantity, and very early, if one has the "know how," and gives attention. It is not advised to use hotbeds for this crop, for the heat, with the necessary moisture, cause decay; the plants will, many of them, damp off and rot. Still, you must start them earlier than is possible in open ground, and to do that take the cold-frame plan. This is simply a rich patch of garden soil with a frame about to hold a hotbed sash. It should have a slope toward the noonday sun. Then you should bank up the frame as protection against late freezes, and have mats or blankets ready to cover on cold nights. These cold frames, for the latitude of forty-two to forty-four, should be gotten ready in March.

The soil should be rich, but light with a mixture of humus and sand. Sow the seed thinly and cover about one-fourth inch, pressing the soil down firmly. Water daily with a fine sprinkler. If the sun shines hot, you must, of course, give ventilation in the middle of the day. By this method you can have good, strong plants ready as soon as it will do to plant out of doors. The plants will be about two inches tall. Well hardened, stocky plants of that size will stand some frost with no injury. But, of course, continued heavy freezing will destroy them.

Sort the plants, using only the best for field setting. Don't crowd them, for, remember the rule: All plants need room if you desire good development. Let the rows be not closer than sixteen inches, and plants in the row some six inches apart. If you wish to force growth after transplanting, use liquid manure. If you do this and have a rich, porous soil to start with, you will get a vigorous, succulent growth. When short of glass for your cold frames, muslin makes an excellent substitute. By this method of work you may have lettuce heads six inches over in May, good to eat and good to sell.

Summer prices for milk were discussed by representatives of the locals of the Milk Producers' Association in the Chicago district at a conference held in Chicago February 2d. The following schedule of prices was submitted: April, $2.40 per 100 pounds; May, $2 per 100 pounds; June, $1.60 per 100 pounds; July, $2.12 per 100 pounds; August, $2.30 per 100 pounds; September, $2.30 per 100 pounds. Nearly all of the 214 locals in the association were represented. The advance proposed, it was stated, is due to the increased price of feeds.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production

THE demand for farm labor in Canada is great. As an inducement to secure the necessary help at once, Canada will give **one hundred and sixty acres of land free as a homestead** and allow the time of the farm laborer, who has filed on the land to apply as residence duties, the same as if he actually had lived on it. Another special concession is the reduction of one year in the time to complete duties. Two years instead of three as heretofore, but only to men working on the farms at least six months in 1917. This appeal for farm help is in no way connected with enlistment for military service, but solely to increase agricultural output. A wonderful opportunity to secure a farm and draw good wages at the same time. Information as to low railway rates may be had on application to

This Coupon Will Bring You Expert Heating Advice FREE

L. J. MUELLER FURNACE CO.,
204 Reed St., Milwaukee, Wis.

Gentlemen: I intend to { build a new house / remodel my house / install a heating system } this spring or summer. I will have ..... rooms to heat, ... downstairs and ..... upstairs. There are ..... outside doors and ..... windows. Please send me your floor plan charts on which I can indicate dimensions and general arrangement of rooms. I am now heating my house with.....

..... I have been considering a { warm air / hot water / steam / pipeless } system.

It is understood that sending in this coupon does not obligate me in any way.

Name ..... State .....

Postoffice .....

Clip and Mail it NOW

HOT WATER, warm air, vapor, steam or pipeless furnace? Which will heat your house the best? Only heating experts can answer this question for you. This coupon will bring their answer, free.

Depends on Conditions

Each one of these different types of heating systems is best adapted for use under certain conditions. Give our engineers the necessary information and they will tell you which one will work best in your home. Their advice will be entirely unprejudiced — they favor no particular type of heating system, since we manufacture all kinds. They will simply tell you what system will heat *your house* most efficiently and economically.

Of Vital Importance

The selection of the type of heating system that fits your house means comfort, fuel economy, convenience, health, years of reliable service. A system that does not fit your house means discomfort, waste of fuel, trouble, danger to health, heavy expense.

To know what kind of a heating system is best adapted for your conditions requires not only a thorough scientific knowledge of certain physical laws, but also a lot of sound common sense and practical experience. The number of square feet of radiating surface required to heat your house properly must be figured with due allowance for exposure, glass surface, construction, location, ventilation and other conditions. Our heating engineers know how to figure it all out with absolute accuracy.

MUELLER HEATING SYSTEMS

Our experience of 60 years as manufacturers of heating systems makes our advice especially valuable. Over 119,000 homes are heated with Mueller heating systems, all giving perfect satisfaction, because each is of the type and size exactly suited to the house in which it is installed. Mueller heating systems are sold only through dealers.

An efficient warm air heating system costs less to install than a steam or hot water system. It provides heat quicker than any other system and is easy to regulate. With it you can keep your rooms comfortable even in the coldest weather.

Hot water, steam or vapor systems are recommended where the size and number of rooms to be heated and other conditions make their use most economical and desirable. The correct design and superior construction of Mueller Heating Systems have made them standard throughout the United States.

The Mueller Pipeless Furnace has exactly same construction as the old reliable Mueller line, but without pipes or flues. Ideal for installing in old or new houses and buildings with small or partial cellars. Will heat whole house comfortably, dependably, cleanly and economically from one register. Saves 35 per cent in fuel.

Will Not Obligate You

Filling out and mailing this coupon will not obligate you in any way. It will bring you what this advertisement says — expert heating advice, which will tell you with absolute certainty just what type and size heating system will be best suited to your house — will give you the most permanent value and satisfaction for the money. This advice will cost you nothing. So you need have no reluctance about sending in the coupon. — Clip and mail it NOW — before you forget it.

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

The Conrath Homemade Stump Piler.

To the Editor:—Up in the north woods of Wisconsin two brothers, Frank and Charlie Conrath, began clearing some logged-off land. The big white pine stumps that studded the land after the underbrush was cleared they found to be their real problem. With dynamite and pullers the stumps could be gotten out of the ground, but what then to do with them was the question. The big, charred chunks and roots could be piled and burned, but how? Necessity became the mother of invention and the Conrath homemade piler resulted.

Any farmer can build one of these pilers. The woods will furnish the timber and any blacksmith or hardware merchant the blocks, iron fittings, etc. And Messrs. Conrath say their idea is free to all.

THE CONRATH STUMP PILER IN ACTION.

The illustration gives an idea how to build the piler, and materials will cost $25 to $30. The construction is shown and is very clear, except the detail showing how the boom is pivoted on the crossbeam. At the center of the crossbeam an iron plate one-fourth inch by four inches by twelve inches with a one and one-fourth inch hole drilled in the center is fitted. Just below the holes in the iron a two-inch hole is bored in the crossbeam.

The end of the boom is cut at an angle to accommodate raising and lowering the boom. Around this end is then strapped the one-fourth inch by four inches by twenty-four inches strap of iron drilled in the center with one and one-eighth inch hole and fitted with the one-inch by six-inch bolt with the head between the end of the boom and the strap.

The boom is then set on the crossbeam, the bolt fitting in the iron plate so that the boom will swing around to the right or left.

The "trip" shown in the illustration is very simple and can be made by any blacksmith. When the stump is ready to be dropped the driver releases the trip, the cable runs back, lowering the stump exactly where the boom tender desires.

While it is possible to pile large stumps with this piler, it is not good practice. Stumps should be broken up with dynamite into smaller pieces that will burn more readily, making a hotter fire, insuring complete destruction. Alfred Mathewson.

Dane Co., Wisconsin.

Axle Grease For Warts.

To the Editor:—Some time ago I saw a question asked about warts on calves and what to do to cure them. Now, if I am correct, these are not properly warts, although they look very much like them. They appear around the eyes and on the nose first, but if not cared for they will spread all over the body, greatly to the detriment of the calves. Also, they are infectious, and, all in all, they are a great nuisance.

Now, if these warts or ringworms are treated as follows they will disappear in short order. Catch the animal and daub on thick any axle grease. Rub it well in and let them go for three or four days. Then take a cob and rub off the whole wart. If it does not all come off, put on more axle grease and repeat. This will surely fix them. Sometimes it takes three or four applications, but it never fails to cure. D. B. Harmon.

Law Questions.

Drainage Across Another's Land.

A Subscriber, Westfield, Wis.—My neighbor and I own adjoining farms in Wisconsin. There is a low, soft marsh on my land with a ditch leading from it towards my neighbor's land. There is a marsh on my neighbor's land with a ditch running from it about twenty rods from the division line between our farms. Last spring I offered to construct a ditch from my marsh and empty it into his ditch at my own expense, but he refused to allow me to do so, and now the surface water from my marsh overflows on my neighbor's lands, which is nearer to a stream than my land. There is a good fall from my land to said stream. (1) How can I ditch from my marsh and get an outlet? (2) How near the line can I outlet such a ditch?

Answer.—(1) You cannot outlet your ditch so near the line that the water will flow upon your neighbor's land and injure it. If you do so you will be liable to him for damages. Your only way to get an outlet to the stream across your neighbor's land is to petition the circuit or county court for a right of way, and if the same is granted, pay to him the amount of damages fixed by the court.

Qualification of Town Board.

Mr. Frank Stoker, Elroy, Wis.—Have the supervisors of any town in Wisconsin any right or authority to go outside of their town to qualify after being elected, and if they do so, would they constitute a lawful town board?

Answer.—They can qualify outside of the town, that is, take the oath of office and have same filed with the town clerk and this would not prevent them from constituting a lawful board.

Auto Accident Caused by Dog.

A Subscriber, Beaver Dam, Wis.—About two months ago, a party of three were traveling on the public road to Beaver Dam, in a Ford car, at a speed of twelve miles an hour, and while passing a one-horse rig near a farmer's house, the farmer's dog ran out in front of the car and was struck by the left front wheel which caused the car to tip over completely and severely hurt two of the occupants, and shook up the other one. The owner of the dog took no notice of the accident and offered no aid until assistance came from two miles away and then he offered help, but he claims that the dog is not to blame for the accident. Is the owner of the dog liable for damages?

Answer.—This is a doubtful case. If the dog was in the habit of running out when vehicles were passing and the owner knew of this habit he would be liable for damages, otherwise he would not be liable. Damage for such injuries must always be based on negligence.

Boundary Line—Lawful Fence.

A Wisconsin Subscriber.—I own land bordering on a lake in Wisconsin. My boundary line was surveyed up to high-water mark along the lake. Some people claim that the government owns six feet of ground along the lake shore. (1) Is this correct, and do people have a right to travel along the lake shore? (2) What is a lawful line fence in Wisconsin?

Answer.—(1) The government does not own six feet of ground along the lake shore. People have no right to travel over private property along the lake shore. Your land extends to high-water mark. (2) A fence made of strong woven wire, the strands to be of not less than No. 12 wire, cross wires or meshes to be not less than No. 16 wire; if cross wires are used, they are to be not more than twelve inches apart, and if meshes they are not to exceed eight inches square, the height to be not less than twenty-six inches, with three barbed wires at the top, the top wire being not less than fifty inches from the ground, attached to posts not more than sixteen feet apart, is a lawful fence in Wisconsin. There are seven other kinds of fences which are lawful, but the description of them is too long to be published in these columns. See laws of Wisconsin 1909, page 473, section 1390-a, for full description.

The HICKORY Dealer Says:

"Get the Hickory Horse Collar. Prevents shoulder troubles. Permits sore shoulders to heal rapidly while the horse goes right on working. The Hickory is designed to fit and places the draft where it should be. *Can't sag, roll, move up or down or pinch.* Made of the best bark-tanned, soft, pliable leather, stuffed with long rye straw, which will not rot, and faced with dampness-repelling, soft, pliable *buckwheat hulls.* No pads necessary."

CURRENT EVENTS

NOTWITHSTANDING the fact that congress adjourned without passing the bill authorizing the president to arm American merchant ships so as to protect them from unrestricted submarine warfare by Germany and Austria, President Wilson has been informed by Secretary of State Lansing and Attorney-General Gregory that he has the power to arm ships as he desires or finds necessary under the rapidly-changing circumstances. Whether the president will act immediately in accordance with this opinion or will wait to call a special session of congress to pass a resolution similar to that killed by a filibuster during the last session has not been revealed. It is taken for granted in all quarters that before July 1st President Wilson will summon an extra session of congress. The only question open now is whether it will be called immediately.

AS a result of the filibuster in the closing hours of the recent congress, by which the armed neutrality bill desired by President Wilson was talked to death, the United States senate, after more than 100 years of unrestricted debate privileges, has put power in the hands of two-thirds of its members in the future to limit discussion and to say when a vote shall be taken on a pending measure. The bill thus limiting debate was passed by the senate by a vote of seventy-six to three, the negative votes being cast by grain-belt senators: LaFollette, of Wisconsin; Gronna, of North Dakota, and Sherman, of Illinois. The exact use of the rule will not be apparent until it is enforced, but it probably cannot be successfully used to prevent the spectacular one-man filibusters by which senators have talked bills pending in the closing hours of a session to a legislative grave. Such filibusters probably cannot be prevented, unless they are foreseen, but an organized affair which must be planned two days or more ahead of a session's end, can be disposed of easily. Heretofore the limit of debate in the senate has been the physical endurance of the senators, but henceforth, on vote of two-thirds of the members, these long-talking debates can be brought to an end.

COUNT ZEPPELIN, inventor of the dirigible balloons which bear his name, died in Germany last week, at the age of seventy-nine years. He had been working for the mastery of the air since he was eighteen. It was the American civil war, in which he participated, that gave Zeppelin his ambition. He saw from the limited use of captive balloons in that war what an advantage an army would have with control of the air, enabling it to observe and follow all the enemy's movements and to drop explosives upon defensive positions from directly overhead. It was not until 1898, however, when the count was sixty years old, that he achieved his first flight of three and three-quarters miles, the longest ever made at that time. On July 2, 1900, he astonished the world with a flight of twenty minutes over the surface of Lake Constance. Following his first success Zeppelin passed through year after year of disappointment. He built in succession five ships. Each gave him a brief triumph—and a long interval of depression. All were destroyed by fire or storm or accident. Being some 400 feet in length and constructed of material that was very expensive they soon bankrupted their inventor. The German government and public stepped in, however, and made it possible for Zeppelin to continue, until the final success crowned his efforts and the dirigible balloon of immense proportions became an assured fact. During the first two years of the war the German flying navy was able to attack English and Scotch towns with impunity, but within the last eight months or so the British have destroyed five or six of the invaders and now seem better able to defend themselves. But the Zeppelin has been the only weapon by which the central powers have been able to touch British property on shore or attack Englishmen in their homes.

ENTERING upon his second term as president, Woodrow Wilson delivered an address notable mainly as a delineation of his Americanism and his ideas on war and peace. In the course of this address the president outlined the following American platform: "These, therefore, are the things we shall stand for, whether in war or in peace. That all nations are equally interested in the peace of the world and in the political stability of free peoples and equally responsible for their maintenance. That the essential principle of peace is mutual equality of nations in all matters of right or privilege. That peace cannot securely or justly rest upon an armed balance of power. That governments derive all their just powers from the consent of the governed and that no other power should be supported by the common thought. That the seas should be equally free and safe for the use of all peoples under rules set up by common agreement and consent and that so far as practicable they should be accessible to all upon equal terms. That national armaments should be limited to the necessities of national order and domestic safety. That the community of interests and of power upon which peace must henceforth depend imposes upon each nation the duty of seeing to it that all influences proceeding from its own citizens meant to encourage or assist revolution in other states should be sternly and effectually suppressed and prevented." The president was sworn into office, for the second time by Chief Justice White. After his inaugural address he reviewed a large and brilliant parade, in which the military dominated. The inaugural ball was dispensed with, as was done four years ago when President Wilson first took his high office. The inauguration was made notable this year by reason of the fight between the president and the twelve senators who had filibustered the "armed neutrality" bill to death the day before the inauguration, the president characterizing these twelve senators (most of them from the grain belt) as a "little group of wilful men representing no opinion but their own" who "have rendered the great government of the United States helpless and contemptible."

AUSTRIA has joined (in a rather half-hearted manner, to be sure) with Germany in unrestricted submarine warfare and the attempted defense thereof. The American ambassador to Austria has been handed the Austrian government's reply to the American note inquiring as to the position of the dual monarchy on this important subject. The reply declares that neutrals are responsible for losses they suffer by entering territory where warlike operations are taking place. After a lengthy discussion of the British blockade, which it declares is illegal, the Austrian reply continues: "The principle that neutrals should enjoy in war times the advantages of the freedom of the seas refers only to neutral vessels and not to neutral persons aboard enemy vessels." It goes on to contend that belligerents are entitled to decide for themselves what measures should be taken against an enemy in sea traffic and concludes: "In such cases neutrals have no other legitimate interests and, therefore, no other legal claim than that a belligerent inform them in time of a prohibition directed to an enemy, so that they can avoid entrusting their lives and their goods to enemy vessels." In official circles in Washington it is held that the Austrian reply holds out little, if any, hope that a break between the United States and Austria can be avoided. The United States always has contended, and still contends in the present crisis, that neutrals aboard enemy merchant ships are entitled to safety. Germany and Austria take a directly opposite stand and on this rock the three countries seem likely to shatter their friendly relations.

AS a direct result of the German blockade decree of January 31st, which also closed to neutral shipping the British ports of Kirkwall and Falmouth, fifty-three steamers of American, Swedish, Danish, Dutch and Norwegian registry have been prevented from sailing from the port of New York or having sailed, now are tied up for an indefinite time at Halifax for examination. According to figures, these ships, had they sailed as scheduled, would have taken approximately 296,000 tons of cargo. Fourteen would have carried passengers and United States mail. The heaviest sufferer has been Holland. Agents reported that twenty-five vessels that would have sailed under conditions prevailing prior to February 1st, are tied up in New York, or have been detained at Halifax. Ten freight ships of neutral nations also are held in New York for orders.

Why Rule No. 1 Comes First

There's no use in spending good money on a battery that won't respond to proper care.

But how can you tell a good battery from a poor one—they all *look* much alike on the outside.

Do what you would do if you were planning to buy a new piece of farm machinery, ask those who have tried it out and *know*.

Four-fifths of all car builders agree on Willard Batteries as the best they can put into their cars. The other fifth are divided among all other makes of batteries.

With such a showing no car-owner need hesitate.

Rule No. 2 Prevents Battery Thirst

These two simple rules are the biggest part of battery care. Observance of them means long life and good health for your battery.

Keep the liquid up to the top of the plates by adding pure water (preferably distilled) every week in summer, every two weeks in winter.

Rule No. 3 Prevents Battery Starving

To know when you need to charge your battery you must test it regularly with a hydrometer. It is a wonderful preventive of battery trouble. If you don't own one, we'll be glad to ship a Willard Hydrometer, with instructions for use, postpaid on receipt of a dollar bill. Address Willard Storage Battery Company, Cleveland, Ohio.

Free Booklets Tell All About Your Battery

Write us for a set of the Battery Health Books telling all about your battery and how to get the most out of it, sent free on request to our Cleveland address.

Ten Years' Success With Guernseys.

(Continued from page 1.)

of milk and 690.69 pounds of fat. He has the size and the depth that go to made up a strong sire. His use will result in a continuance of a policy of raising vigorous calves that are a big point in favor of Fox Bros.

Several of the cows have produced creditable records under difficulties. Bridget Sequel, a mature cow, recently finished a record of 11,293 pounds of milk and 562.63 pounds of fat. Under unfavorable conditions she finished strong with better than one pound of fat per day after twelve months of milking.

Maid of Richmond produced in 230 days 400 pounds of fat and 8,000 pounds of milk. She was imported in dam and is of Raymond de Prehl breeding. At the Illinois State Fair she won the three-day butter test in 1913.

Thelma Glenwood 2d, champion at the Illinois State Fair in 1913, has a record of 680 pounds of fat and 14,752 pounds of milk. She is the dam of Snippy Glenwood, which cow at the age of two years made 510 pounds of fat and 10,549 pounds of milk.

Rosalind of Waukesha, half sister to King Talladeen of Chester Hill, has a record of 8,760 pounds of milk and 408 pounds of fat as a two year old. She was sired by Skeezicks, one of the famous bulls of the Guernsey breed.

Shopgirl of Haddon produced at the age of two years 9,307 pounds of milk and 340 pounds of fat. She is sired by imperial Spotswood Sequel, which has fourteen A. R. daughters to his credit. Her half sister made 13,582 pounds of milk and 787 pounds of fat as a four year old. Shopgirl at the age of five years made 11,820 pounds of milk and 631 pounds of fat.

The Fox Brothers have a special method in caring for their bulls. They keep their animals in a healthy and vigorous condition by making them work and exercise. They hitch and harness them to a vehicle the same as a horse and thus keep the bull gentle and trained to obey besides keeping him in better breeding condition. The Fox Brothers do not pasture their cows in spite of the large amount of land on the farm. The animals are let out of the barn on nice days for several hours each day and allowed to exercise. All of the acres on the farm, however, are used for the production of feed for the herd. The manure from the stable has proved to be a fertilizer second to none, as the yield has increased generally since barn feeding was started. Oats very frequently reached the eighty-bushel mark. Rye averaging in Wisconsin around twenty bushels to the acre produces on the Fox farm better than fifty bushels. Alfalfa and clover are grown in abundance for roughage. Such barley as is sown is usually sown as a nurse crop with alfalfa at the rate of one bushel per acre. Besides placing the young alfalfa on even terms with the world, the crop will yield thirty-five bushels of barley for the season. All the corn that is raised on the place practically finds its way into the four silos that are on the farm. All of the animals receive silage the year around together with mangles, which are chopped and mixed with the grain feed. The feed of each cow is weighed out separately each day. Though this is troublesome, as it requires a considerable part of one man's time each day, it is in the estimation of the owners nevertheless a profitable practice. Both men think that a cow in order to yield properly must be handled and fed as an individual and they attribute no small part of their success in the show ring and in production to the individual care they have given each animal in their barns.

Under the care of these two men the business has assumed considerable proportions. About seventy-five head of cattle are sold from the farm each year. Hardly a day goes by but that letters and inquiries do not have to be answered. The herds are still tested regularly and with the breeding records stenographic help is a necessity.

The Fox Brothers have been active in advancing the interests of the Guernsey breed throughout the state and as members and as officers of the Waukesha County Guernsey Breeders' Association their efforts have been highly successful. Waukesha county has a live organization and throughout the United States the county is known as the Guernsey capital of America.

In the herd of Fox Brothers and in the success which has accompanied their operation the young breeders of any pure-bred strain of animals can find a lesson. Thrift and the spirit of sticking to a resolve and giving each enterprise a thorough trial will always result in final and complete satisfaction.

Dairymaid of Waukesha, now milking since the 16th of October and averaging two pounds fat daily since the start of the test. She is a granddaughter of the famous Essie Jeweler, in her day grand champion cow at all the fairs of the middle West.

Like Wisconsin Cattle.

E. G. Bennett, dairy commissioner of Missouri, heading a delegation of farmers from his state, is visiting several of the leading live stock centers of Wisconsin in search of dairy animals. The delegation has been commissioned to buy between seventeen and eighteen carloads of grade Guernsey and Holstein cows and heifers as well as a car-lot shipment of pure-bred sires.

Representatives of the college of agriculture and the Wisconsin Live Stock Breeders' Association have placed them in communication with officials in districts where cattle of the breeds, ages and character desired are for sale.

La Crosse Happy Farmer Tractor

MODEL A
8-16 horse power
$585.00

MODEL B
12-24 horse power
$735.00

F. O. B. FACTORY, AT LA CROSSE, WIS.

Any Farmer Can Afford One—

Even the tenant farmer can buy and use one of these models profitably. Cut the cost of feeding idle horses. Speed up spring work—get crops started *on time*. One La Crosse Happy Farmer Tractor can do the work of 6 to 8 horses, and do the work better.

Two models, built with highest quality materials—simple construction—only two-thirds the parts used in other tractors. Model "A"—8-16 h. p.—guaranteed to pull 2 plows—Model "B"—12-24 h. p.—will pull 3 plows under practically any conditions. Either model will do your belt work. La Crosse Happy Farmer Tractor-Drawn Implements for all farm work. Write for Catalog.

Model B is strictly a kerosene burner; equipped with Hyatt Roller Bearings. Twin Cylinder Motor. Really a sensational value at a low price.

LA CROSSE TRACTOR CO.
Dept. 17 Minneapolis, Minn.
We have a Distributor in your vicinity for prompt service.

The Tractor To Buy

EAGLE

YOU want a tractor that not only gives you dependable traction, but belt power for your silo filling, threshing, etc. The Eagle is an all-round engine, as well as tractor. Has the famous two-cylinder engine with valve-in-head motor. The outgrowth of years' experience in motor and tractor manufacturing. Runs as well on **kerosene** as gasoline. Ideal for medium-sized farms. Simple in construction; all parts easily accessible. Easy to operate. 8-16 H. P.; 12-22 H. P.; 16-30 H. P. Sold under an absolute guarantee. For complete details send for our descriptive catalog today.

EAGLE MFG. CO. 640 Winnebago St., APPLETON, WIS.

A real furnace. Exactly same construction as the old, reliable *Mueller* line, but without pipes or flues. Ideal for old or new homes and buildings with small or partial cellars. Saves 35% in fuel; burns hard or soft coal, coke or wood. Heats whole house comfortably, dependably, cleanly and economically *from one register*

Made of solid cast iron, has triple jacket, substantial firepot and radiator, best type grate. Designed right, built right; 60 years of experience and the *Mueller Guarantee* behind it.

Tear out this ad, write your name and address on margin and mail to us for valuable free book on pipeless heating and name of nearest Mueller dealer.

Rack Body for Hay, Straw, Loose Grain

High Side Flare-board Body

Hog Rack Body

Flat Rack Body

Stock Rack Body

Basket Rack Body

Flat Rack Body, scoop board down

Grain Body

4 Times the Work at Same Cost

In all heavy farm hauling this is what users of Smith Form-a-Truck are doing. Hauling twice the load three times as far—saving feed charges, veterinary bills and farm labor — and doing its work in all kinds of weather at the lowest cost for hauling that has ever been reached.

Keep Horses for Farm Work Only

Use your horses for plowing, seeding and harvesting. But not for hauling. You delay farm work—lose time and money.

Let Smith Form-a-Truck carry your manure — hay — fertilizer and do all other hauling on the farm. It will do the work of four teams. *And at half the cost!*

Use the Smith Form-a-Truck for hauling milk, grain and other farm products to town. It will haul as much as two teams. *And in half the time!* That alone will save two to three hours' time for two drivers. In a year it amounts to 1200 hours—120 days—$240 pay. And it gives you the use of those four horses for farm work.

20 More Acres

Your Smith Form-a-Truck is as good as 20 acres of land to you. Government figures show that in a single year four horses eat all the feed that can be grown on 20 acres of land. Smith Form-a-Truck will save that. 20 acres of land for $350! Think of it!

Unbeatable for Dairy Farm

All over the country dairy farmers are replacing expensive horses with economical Smith Form-a-Trucks. It will haul 2,000 pounds of milk ten miles and return with the empty cans in less than 2 hours. And the total cost for the round trip is but $1.50 — gasoline, oil, tires and everything. Think of it! Two teams and two drivers would require a half a day for this work.

And in every other line of farm hauling Smith Form-a-Truck is showing equal economy.

Travels Anywhere

Smith Form-a-Truck will travel anywhere horses will go—through mud, sand, snow. No hill is too steep.

Famous 8-in-1 Convertible Farm Body

Change to any one of eight types of bodies is made instantly with the famous 8-in-1 farm body. No tools required. Merely pull the lever. This is an exclusive Smith Form-a-Truck feature.

Amazing Strength Smith Form-a-Truck combines with any Ford, Maxwell, Overland, Dodge Brothers, Buick or Chevrolet to make a fully guaranteed one ton truck. When the chassis of these cars is telescoped on the Smith Form-a-Truck frame, the wonderful strength of these cars is reinforced. A double construction feature is provided — the strongest construction known to engineering.

And the rear axles of these cars merely become jackshafts for the chain drive. The strong, sturdy Smith Form-a-Truck axle carries 90% of the load.

Unequalled Economy Note these wonderful records of Smith Form-a-Trucks in daily use on hundreds and hundreds of farms. 12 to 15 miles on a gallon of gasoline—6,000 to 8,000 miles on a set of tires — 12 to 18 miles per hour. The first Smith Form-a-Truck ever built is still in daily service. It has traveled over 20,000 miles. And total repair cost has been less than $8.00.

Send Coupon Now Every day's delay in putting the Smith Form-a-Truck on your farm costs you hard earned money. Send for the big FREE Book *today*.

Write your name on the coupon *Now*. Never mind pen and ink. A pencil will do. But mail it at once.

UPPER WISCONSIN

How a Wisconsin Farm Girl Got a Piano.

[Editor's Note.—The following very interesting letter was submitted in the boys' and girls' club contest work in Oneida county, Wis., and we are indebted to County Agricultural Representative W. D. Juday, for a copy. The letter not only gives some good pointers on what a bright farm girl can do if she tried, but also speaks some important truths concerning the raising of potatoes.]

I am a farmer girl thirteen years old, living in Oneida county, Wisconsin. In the year 1916, a few days before Thanksgiving, a letter came from my cousin in a near-by town asking my brother and me to come over Thanksgiving Day and spend a few days with her.

Thanksgiving morning I got up at half past four and we were taken to a small town nine miles from Three Lakes so we might catch the eight o'clock train. About noon we reached our destination.

My cousin had a piano, and, as I was eager to play on any piano, I spent most of my time playing. At home I had only an organ, and when I played on pianos the keys seemed to press very hard, but this piano was very easy to play and sounded well.

After reaching home I began to talk of nothing but pianos. I was continually teasing my father to buy me a piano and one day he said, "Florence, you may raise potatoes and buy your own piano. I will give you twenty bushels of the only certified Triumph seed in the state of Wisconsin and the best acre on the farm to grow them on." I thought my father was saying it in fun, for he had always said the house was too small for a piano. My mother saw that if I was going to play much I would need a piano to encourage me, so I readily accepted my father's offer.

We soaked the seed in a formaldehyde solution of one pint formalin to thirty gallons of water. The seed was hand cut by my father and myself and planted May 18, 1916.

My father says most growers cut the seed pieces too small and do not use enough seed.

We planted in three-foot rows with a two-horse, two-man planter, set on a sixteen and one-half inch drop, planting one seed piece at each drop. All two and three-ounce seed was planted whole. The larger seed was cut in two or three pieces, always cutting through lengthwise, from seed end to stem end, so as to get some of the strong seed end on each piece. My father says the seed end is the business end of the potato. We planted on about a seven-inch spring plowing of an alfalfa, clover and June grass sod which was pastured the previous season. The winter before pasturing the land was heavily coated with stable manure. We also used 600 pounds of 3-8-1 commercial fertilizer. The fertilizer was dropped in the rows at planting.

The potatoes came up in about three weeks and grew very rapidly. When they were coming up they were dragged with a spike-tooth drag and we hand hoed most of them once and some of them twice. I did as much of this work as I could.

My father and brothers cultivated them four times with a one-horse, seven-tooth, spring-tooth walking cultivator. I rode the horse and guided him so they could give all of their attention to the cultivator.

They were also hilled up by a shovel plowing twice. We have too much rain here to permit level culture. I exchanged work with my father and brothers by riding horse for them to cultivate their eleven acres.

They were sprayed twice with ready-prepared Bordeaux, to which we added Paris green at the rate of two pounds to 100 gallons of water. My father uses a two-horse, six-row sprayer, but, as my field was too small, I hired a man to spray with our three-gallon knapsack sprayer, going over each row twice at one spraying. I frequently used dry arsenate of lead in a hand blow gun whenever I saw any scattered bugs.

Late in July the vines covered the ground and looked fine giving promise of a large crop.

On July 3d our local banker, who has a 3,000-acre farm, saw my field and proposed to buy them on contract for fall delivery. With my father I closed the contract at $1 per bushel and received $100 at signing of same. My mother taught me how to do business at the bank when I deposited the money and opened a checking account in my own name. In the contract we reserved the right to select what snow stock we wished for our own use. My father also had to have the entire acre hand dug and personally hill selected the entire crop for special seed stock.

We dug the potatoes late in September.

The total yield was 336 bushels. We delivered on the contract 302 bushels, for which I received the total of $302 and also had seven and one-half bushels of show stock. The twenty-six and one-half bushels of small potatoes and culls were fed to our cows.

I exhibited at our Oneida County Fair and won the first premium of $10. At the Wisconsin State Fair I won first premium of $7 and the blue ribbon. I won third at the Oneida County Potato Show, the premium being a good fountain pen, and the Wisconsin State Show also I won first in the general class of Triumphs, which was $5 and the blue ribbon, and the same in the children's class. This exhibit had to be twenty-five potatoes picked out by the exhibitor without any help.

I sold three bushels of show stock at $3.50 per bushel, making total receipts of $352.50. I paid out for fertilizer $9 and for Bordeaux $7. Having exchanged work with my father and brothers, I only paid $33.44 for hired help at digging.

Professor Wirtley, from the Bermuda Islands, who came with the potato inspectors, said that my field was the finest field of Triumphs he had seen in his travels.

I have my piano and music bench and still have several dollars in the bank to help pay expenses when I go to a conservatory of music. If you will come to our farm next summer when the potatoes are in bloom I will play for you on my piano.

Appreciate Value of Good Sires.

Langlade county farmers are more and more coming to appreciate the value of high-class sires. Since the first of the year three high-class dairy sires have been purchased from breeders in the southern part of the state, also as many registered Short-horns of milking strain. In addition to the above, three farmers purchased registered Guernseys in the county since the first of the year. A number of others are now in the market for good young sires and are making effort to get something to their liking. The better sire spirit is in the air and farmers who not long since were satisfied with a grade are now on the lookout for pure breds.

"No use talking," declared one farmer recently, "if a man wants to make headway toward getting a good herd he must have something better than a grade bull."

Among the Langlade county farmers who recently purchased pure breds are the following: Guernseys—Anton Follstad, Elcho; Head & Jackson, Antigo; Matt Wachal, Ackley; Louis Heimler, Peck; Jerseys—Chas. Parsons, Polar; Blaine Stewart, Antigo; Holsteins—Chas. Stengl, Ackley, and Chas. Nelson & Son, Ackley; Short-horns—Malcolm Hutchinson, Geo. Carlson, Henry Buboltz, Bryant; Dan O'Brian, George Gallenberg, Antigo.

Putting up Frozen Fish.

To the Editor:—I have seen that one of our Wisconsin Farmer sisters asks if anyone can tell her whether frozen fish can be put up in salt for the summer. I will give you my experience in this line and I have had good success. Take a little hardwood barrel or stone jar. Take out the insides of the fish, leaving on the scales and cutting off the heads. The fish may be cut in pieces if they are too big. Do not put in any water—let the brine come on itself. Soak the fish in fresh water before using. I also take the fish and take out the insides, soak them in the strongest salt water for a few hours or sometimes overnight in water not too strong with salt, then I hang them up so the water drains off and smoke them for three or four hours in a home-made smokehouse. They are fine. Pack them in an ice box and keep in a dry place. I have smoked fish all summer this way.

Oneida Co., Wis. Red Wing.

Currant bushes are poor neighbors for white pine trees, as the currant bush catches the fungus which causes white pine blister rust.

Get Our Special Offer on the Faultless Stump Puller

We want to put a Faultless Stump Puller to work in your field, under your own direction. Put it to any hard-work test you like for 30 days—clear from 10 to 50 acres.

It Must Satisfy You

If the Faultless does not do the work to your entire satisfaction, return it to us and we will refund the purchase price and pay the return freight.

The Favorite of Big Land Owners
20 Years a Record Breaker for Work

Skidmore Land Co., Marinette, Wis., write: "We feel indebted to you because we own thousands of acres of unimproved land and your Faultless Stump Puller has solved the problem of putting this land under cultivation."

E. W. Graves, Horticultural Supt. and Mgr., Mexican Plantation Assn., Chicago, Ill., writes: "The Faultless never fails to do the work quickly and thoroughly. The manner in which the cable is handled saves much time and labor.

In and Around Wisconsin

Kilnford Bell 3d, the famous champion Ayrshire cow owned by Adam Seitz, Waukesha county, Wisconsin, died recently at Mr. Seitz' Spring City Ayrshire Stock Farm. Kilnford Bell 3d was imported by Adam Seitz. She was the mainstay of the Seitz Ayrshire herd for many years and has probably traveled more miles and been exhibited at more fairs than any other animal of any breed. A winner wherever shown, she invited competition from other breeds and in 1913 and 1914 after winning first and grand championship Ayrshire at the National Dairy Show, she competed with the champions of the Jersey, Guernsey, Holstein and Brown Swiss breeds and was awarded the Valentine Trophy, valued at $500, symbolic of the world's championship of all dairy breeds. The winning of such an honor for two consecutive years is proof in itself of her greatness. An animal of outstanding merit, she has graced the arena of every state fair of any consequence and also the International, National, Dairy Cattle Congress and southwestern dairy shows. First and grand championships were awarded her wherever shown. She was active, alert and walked off briskly, truly an aristocrat of the bluest blood. Her record in Scotland as a two year old was 12,000 pounds of milk in nine months, testing 4.4 per cent, and as a mature cow 13,565 pounds of milk and 625 pounds of butter in ten months. Show ring enthusiasts will miss the great Ayrshire cow in 1917 and breeders of dairy cattle the world over will continue to refer to Kilnford Bell 3d when emphasizing dairy type.

The Pabst Stock Farm, Oconomowoc, Wisconsin, has recently sold to Mr. Luther W. Smith, Manteno, Illinois, bull calf No. 165, Pabst Maplecrest De Kol King, born May 24, 1916. This calf is by Maplecrest King De Kol, by whom they have a large number of heifers which they will test in the near future and he is the bull that was recently sold to Mr. Joy Morton to head his herd on his farm. Maplecrest King De Kol is by Friend Hengerveld De Kol Butterboy, the sire of numerous 1,200-pound cows, and the young bull is out of Pabst Forgetmenot, with a three-year-old record of 22.48 pounds of butter, by Pabst De Freule Pontiac, a young son of the senior sire, King Pontiac Champion and out of a twenty-nine-pound cow. The second dam of this young bull is Edith De Kol Burke Hengerveld, with a record of 33.86 pounds. Pabst Forgetmenot is a large, growthy heifer and we are positive that she has capacity to equal the record of her dam. This youngster is a wonderful individual and Mr. Smith ought to show good results by having selected this young bull for his herd.

The North Sharon Creamery Company, Walworth county, has discontinued the making of butter and it is manufacturing cheese exclusively. This factory at one time cared for 35,000 pounds of milk per day, but recently has been receiving only about 2,500 pounds, due to the competition from the condensery. For the month of February the North Sharon factory paid $1.43 per 100 pounds for milk, while the American Milk Company at its Sharon plant paid $2 per 100 pounds for 3.5 per cent milk. A creamery at Slade's Corners, also in Walworth county, which has been in operation for twenty-seven years, closed because of lack of patronage. In spite of the high price of butter, condenseries seem to be able to pay more for milk than the creameries can pay. Owing to this condition a number of creameries have changed to cheese factories and others which come in close competition with condenseries are being forced to close.

William F. Renk, secretary of the Wisconsin Sheep Breeders' Association, has been selected by the Shropshire breeders as judge of all Shropshires at the 1917 International. Mr. Renk's appointment is a good one, as there is hardly a man who has been so consistently successful with sheep as Mr. Renk, and, both in the ring and in the feed lot, he has shown that he is a sheepman who knows the game from all angles. For years he has added to the reputation of the state by his many championship entries in the sheep classes at the leading fairs of the middle West. His alternate will be J. C. Duncan, of Lewiston, N. Y.

Meetings have been arranged in several counties in Wisconsin for reports on farm management. Dunn county farmers will meet at Menominie, March 9th. Other dates announced include Jefferson county, Jefferson, on March 15th-16th; St. Croix county, at Roberts, March 19th; Polk county, at Osceola, March 20th; Barron county, meetings at Barron, Chetek and Rice Lake on March 21st, 22d and 23d respectively; Douglas county at Superior, March 24th; Oneida county, at Rhinelander, March 26th; Taylor county, at Medford, March 28th.

The Sauk County Holstein Breeders' Association recently held its meeting at Reedsburg with about forty present. Professor Gunn, of Madison, talked on farm management and better dairying. The following officers were elected for the ensuing year: President, L. E. Stone, Prairie du Sac; vice president, E. H. Koenecke, Reedsburg; secretary and treasurer, Orrie Kirkpatrick, Reedsburg. Directors: Frank Powell, Ed Rusch, Reedsburg, and John Alexander, Baraboo. The annual June picnic will be held at the L. E. Stone farm near Prairie du Sac.

W. H. Jones, proprietor of Oak Grove Stock Farm, east of Juneau, Dodge county, Wisconsin, recently sold three pure-bred Holstein cows to A. B. Spooner, prominent Holstein dealer of California. Mr. Jones' sale included Clothilda Canary Homestead, Lady Canary Pontiac and Canary Girl Pontiac, all bred to Canary Pontiac Butter Boy 166112. The price was $250 per head. Another well-known Dodge county herd from which selections were made by Mr. Spooner is that of Meadow Brook Farm, in the town of Clyman, owned by O. E. Sette, the purchase here including six head of young stock. These Holsteins are of advanced registry breeding. In the lot were two young bulls, Sir Mutual Fayne, whose dam has a butter record of 20.6 pounds in seven days and a record for three years of eighty pounds of milk per day, and Sir Fayne Duchess, whose dam gave 589 pounds of milk and 23.8 pounds of butter in seven days.

More than 1,000 people attended the sixth annual farmers' course at Rochester, Racine county, the last week in February. This course was supervised by Prof. C. E. Fawcett and there was a fine exhibit of grain by members of the Racine County Agricultural Experiment Association. This is one of the most successful farmers' meetings ever held in southwestern Wisconsin.

The Wisconsin Historical Society has gathered some information relative to the "hop craze" which swept over Wisconsin between 1860 and 1870. In 1861 the best Wisconsin grades of hops sold on the New York market at 15 to 25 cents per pound. In 1865 they had advanced to 50 and 65 cents per pound and in 1867 some sold as high as 70 cents per pound. Sauk county farmers are said to have realized from $800 to $825 per acre by raising hops. One farmer is reported to have sold a portion of fifteen-sixteenths of an acre for $1,600. The big crops of hops in Wisconsin, however, lasted for only a few years on account of the inroads made by the louse. In addition to this the New York market was glutted and the hop business soon passed out of existence.

The introduction of tractors is bound to result in stimulating interest in tile drainage. The tractor does not work well on wet ground, but it is very effective when the soil is in good condition. A subscriber to this paper purchased a small tractor last year and his sixteen-year-old son plowed 300 acres with it. Most of this plowing was done when the soil was too dry to be worked by horses. He feels that he practically paid for the tractor last year.

SOW STERLING SEEDS for BETTER GARDEN CROPS

IMPROVING the yield and quality of your garden crops is important this year. Beans and many other food products are worth more now than at any time during the last quarter century. Yet you can raise a large portion of your family's food in your own garden and keep your table bountifully supplied with all kinds of delicious fresh vegetables at very slight cost.

Greatest success in gardening is attained only by sowing reliable seeds. Northrup, King & Co.'s garden seeds have been bred and selected for trueness to type, superior quality and heavy yield. They are carefully tested for germination and are especially adapted to sowing in the Northwest.

That's why it will pay you to be particular this year in asking your dealer for

NORTHRUP, KING & CO.'S SEEDS

NORTHRUP, KING & CO., MINNEAPOLIS, MINN.

The Hickory Dealer Says "Tines Can't Slip Out"

HE *knows* because his best customers all tell him so, season after season.

The Hickory Guaranteed Thresher Fork

Furthermore the fork is backed by the binding guarantee of the Kelley - How - Thomson Company—and there's a special reason. The HICKORY

Thresher Fork has tines forged in one solid piece with tang that runs up into handle where it is riveted solid with handle and straps. Shrinkage can't loosen tines—no danger of dropping into thresher.

Made of high carbon steel, oil tempered and thoroughly tested. Handle second growth white ash, thoroughly seasoned, smoothed and polished.

Ask Your Hickory Dealer

Hickory Line includes tools, cutlery, hardware, harness, horse collars, paint, etc.—all guaranteed. Send your name on a postal and we will tell you more about Hickory Goods—and also the name of nearest Hickory dealer.

When writing to advertisers kindly mention The Wisconsin Farmer

Studying Farm Management.

Pointers on This Important Division of Farming, as Outlined by D. H. Otis, of the Wisconsin College of Agriculture.

THERE is a story in each of the farm management reports which Dean Otis, of the farm management department of the college of agriculture, is returning to the farmers that have kept accurate records of their farm operations during the last year. The work has found new recruits in all of the counties where it is now being carried on. In 1915 there were 365 records kept. In 1916 this number increased to 450. This year will probably see still more farmers computing the cost of their farm operations down to the last cent.

The value of Dean Otis' work lies in the fact that through these records each farmer can compare his results with the average results from all the records for the year. Exact figures are available through the accurate system which is employed.

At the recent meeting of the Fond du Lac County Order of the Wisconsin Experiment Association the reports for Fond du Lac county were distributed. The results are given in Table 1. On the left hand the reader will notice the blank column under the heading "Your Farm." Those who have kept this record have in their copies this column filled in with the results from their farms. Thus they can compare very closely what the average was and whether they were above or below in any of their operations. The reason for success or failure can then be traced to the profitable or unprofitable enterprise. It is a fact that without books few can tell where the profits or losses of the year's business come from.

TABLE 1—EFFICIENCY FACTORS, FOND DU LAC COUNTY, 1916.

	Your farm	County average 1916, 21 farms	County average past 5 years 91 farms
Labor income		$ 1,207	$ 1,282
Size of business:			
1. Size of farm		130	
2. Total investment		$27,016	$22,030
3. Operating capital		7,834	7,853
4. Investment in cattle		4,161	
5. Number of cows		20	20
6. Farm receipts*		5,021	4,918
7. Farm expenses*		2,402	
Diversity of business:			
1. Dairy products		1,688	1,679
2. All live stock			
A. Sales		2,400	2,102
B. Inventory		367	
3. Crops			
A. Sales		630	736
B. Inventory		66	
4. Miscellaneous		254	323
Quality of business:			
1. Dairy receipts per cow		85	85
2. Live stock receipts per cow		82	

*Permanent improvements and live stock purchases are not included.

In Table 2 are given the standard or average crop costs as they have been computed by Dean Otis by careful and extensive averaging of all the records available. In Table 3 the application of the method of using standard costs to determine actual costs on an individual farm is given. Taking the standard cost of barley from Table 2 plus the rent of the land (6 per cent of the value of land to cover interest and taxes) we would have with $100 land the charge of $52 for raising four acres of barley. Thus all the enterprises of the farm can be computed and the total for column C would give us the standard cost—what it would cost according to the figures of all farmers. Now the actual cost is known at the end of each year, as the total for the farm operations has been kept track of during the year. This total ($3,963) in column D is, however, lower than the standard cost. Dividing one by the other the per cent of accuracy is established. In this case the table gives it as 95.7 per cent normal. Taking this per cent of our individual items in column C we get the correct cost to us of each enterprise. Thus instead of the standard cost of $52 for four acres of barley the cost is only 95.7 per cent or $50. We know what the yield and the price received for barley was so we have column E complete. Subtract the $50 from the $131 income and we have the profit we made on our barley. To find the profit per acre the number of acres are divided into the profit. In this case the four acres of barley bringing a profit of $81 would credit each acre with a profit of $20.50.

Table 2a gives the cost of the cattle for one year. These are figured on the basis of units. A mature cow or steer classes as one unit. All other smaller animals are figured a unit when they equal the expense of keeping a general-purpose cow.

With each enterprise thus analyzed there can be no better proof for the banker than the figures when the farmer wishes to make a loan for additional cattle or hogs. The farmer can also tell where he is not making money and be more careful in his investments in that particular direction next year.

Dean Otis has worked for many years to devise a system of accurate bookkeeping for the farm that would be simple enough to allow for quick and accurate entries. He accomplished this about two years ago. For this book the farmer pays cost price and can keep in it the entire farm transactions for the year. At the end of the year he can send this book to the farm management department and have the totals figured if he does not care to do this himself. An analytical study will be made of his accounts as outlined above so that the real value of the accounting is accomplished.

TABLE 3—SAMPLE APPLICATION OF METHOD OF USING STANDARD COSTS TO DETERMINE ACTUAL COSTS ON AN INDIVIDUAL FARM

A	B	C	D	E	F	G
Crop or class of live stock	Acres or units	Standard costs	Actual cost computed	Income	Profit computed	Profit per acre or unit computed
Barley	4	52	50	131	81	$20.50
Oats	17	204	195	327	132	7.76
Alfalfa	17	204	195	525	330	19.41
Clover	12	108	103	350	247	20.58
Clover and timothy	20	160	153	420	267	13.35
Silage	17	374	358	472	114	6.70
Pasture	54¼	163	156	156		
Cattle	26¾	2,675	2,560	3,658	1,098	41.05
Hogs	2.7	202	193	107	—86	—31.84
Total		$4,142	$3,963	$6,146	$2,183	

Actual expenses, $3,963, divided by standard expenses $4,142, equal 95.7 per cent of normal.

A cost accounting system is as necessary on the farm as in a city business. Men with not half the investment a farm represents will go to much trouble to find out just where the profits are made and where the business is not doing them much good. There is no reason why the farm should not be given the same consideration.

TABLE 2—STANDARD OR AVERAGE CROP COSTS PER ACRE.

Grains:	
Barley—Rent* plus	$10
Corn— " "	15
Oats— " "	9
Peas— " "	13
Rye— " "	7

*Rent—Six per cent on value of land, to cover interest and taxes.

TABLE 2A.—STANDARD OR AVERAGE LIVE STOCK COSTS PER ANIMAL UNIT.

Cattle (1 cow, 2 heifers or 2 calves=animal unit)	
General dairymen	$ 75
Pure-bred dairymen	100
Market milk producers (special)	125
Sheep (7 sheep or 14 lambs=animal unit)	75
Hogs (1,500 pounds=animal unit)	75
Poultry (100 hens=animal unit)	75

SUMMARY OF RESULTS FOR FOND DU LAC COUNTY FOR THE PAST FIVE YEARS.

TABLE I—RELATION OF CROP AREA TO LABOR INCOME.

Group	Crop acres	Labor income	No. of records
1	Below 40	$ 984	3
2	40 to 100	1,218	32
3	Over 100	1,743	30

TABLE II—RELATION OF OPERATING CAPITAL TO LABOR INCOME.

Group	% operating capital	Labor income	No. of records
1	Below 20%	$ 936	23
2	20 to 30%	1,088	9
3	Over 30%	2,480	16

TABLE III—RELATION OF INCOME FROM DAIRY PRODUCTS TO LABOR INCOME

Group	Income from dairy products	Labor income	No. of records
1	Below 1,500	$ 766	51
2	1,500 to 2,000	1,403	11
3	2,000 to 2,500	1,946	11
4	Over 2,500	2,328	17

TABLE IV—RELATION OF NUMBER OF COWS TO LABOR INCOME.

Group	No. of cows	Labor income	No. of records
1	Below 15	$ 895	34
2	15 to 25	1,057	39
3	Over 25	2,001	14

TABLE V—RELATION OF MILK RECEIPTS PER COW TO LABOR INCOME.

Group	Dairy rec'ts per cow	Labor income	No. of records
1	Below 80	$ 750	50
2	80 to 100	1,310	25
3	Over 100	1,951	19

TABLE VI—RELATION OF LIVE STOCK RECEIPTS PER COW TO

Group	Live stock rec'ts per cow	Labor income	no. of records
1	Below 30	$ 767	19
2	30 to 50	1,156	15
3	Over 50	1,479	35

The summary of results over a longer period of time is always of more value than short-time averages. The first results of the farm management department have not in any way been weakened by the averages for the past five years. Above are given some of the interesting figures which the work in Fond du Lac county brought out. It is plain after the records have been looked over that some forms of enterprises cannot be considered profitable. Small acreage is not always, but quite frequently only, profitable to a very limited degree.

Farm Hands Wanted

Western Canada Farmers Require 50,000 American Farm Laborers AT ONCE

Urgent demand sent out for farm help by the Government of Canada. Good wages. Steady employment. Low railway fares. Pleasant surroundings. Comfortable homes. No Compulsory Military Service. Farm hands from the United States are absolutely guaranteed against Conscription. This advertisement is to secure farm help to replace Canadian farmers who have enlisted for the war.

A splendid opportunity for the young man to investigate Western Canada's agricultural offerings, and to do so at no expense.
Only those accustomed to farming need apply.

For particulars as to railway rates and districts where labor is required, or other information regarding Western Canada, apply to

George A. Hall, 123 Second St., Milwaukee, Wis.
Authorized Canadian Government Agent

Wizards of Transportation

George Stephenson is rightly called the father of the steam railway. He ran the first successful steam engine on the 25th of July, 1814. In September, 1825, he opened the first railway over which passengers and goods were carried by a locomotive.

The Human Interest In Progress

THE man who is responsible for a system by which the world enjoys safer, easier, quicker and cheaper transportation, is a determining factor in progress.

When George Stephenson started the first locomotive on its way he pushed the world forward centuries. Today we see the automobile with all its possibilities made practical and its energy made effective by the rubber tire.

The leading example of highly specialized and efficient tire service is found in Firestone Non-Skid Tires.

The miles of reliable wear on any road at all seasons, the car-protection and easy-riding, make Firestone Tires a world-wonder in transportation.

And as there is a man-power behind every big work, so this service is vitalized and given the personal element by the name on every tire of the founder and present head of the business, Mr. Firestone. That name on the tire is your assurance of quality.

Your dealer can get Firestones for you, and this quality will cost you no more than ordinary tires. Because Firestone Tires are widespread in use and the output is tremendous and efficiently handled by the Firestone Organization. Your dealer will serve you.

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before buying a gasoline engine (manure spreader, cream separator or tractor) of any make, or kind, or price, please ask for and read Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer engines, separators, spreaders direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a gasoline engine or any of the other Galloway lines until you first get our prices and our proposition. Get my price before you buy! Cash or time.

HERE'S THE REAL PROOF!

I can't give it praise enough. I had a 6 h. p. Galloway engine belted to my 16 in. corn mill and it does the work, where an 8 h.p. of another make did not. M. P. SHOEMAKE, DEFEATED, TENN.

It has not cost me one cent for repairs. Am now buying a 2 1-4 h. p. engine and washing machine for the home. Consider the Galloway simplest engine made. ADOLPH DRINOVSKY, TRAER, IA.

My 6 h.p. Galloway was 5 yrs. old this fall. Works perfectly—good for 15 yrs. yet. HAROLD W. BARNES, DELPHI, IND.

I found the 16 h. p. Galloway simplest, most powerful, best governed engine I ever saw and $225 cheaper. HENRY WENHAM, MILTON, WIS.

THE WM. GALLOWAY CO., 35 Galloway Station, **Waterloo, Iowa**

Fruit and Garden

It Pays to Spray the Orchard

No Principle in Horicultural Practice Is More Firmly Established Than That Sensible Spraying Improves Fruit.

SPRAYING is necessary if good fruit is to be expected. Many growers think they spray when in fact they only start the operation or only half execute it. Know the pest! Know what to use! Know when to use it! Apply it thoroughly! If these injunctions are followed successful spraying is assured.

Owing to the limited time at their disposal, many growers do not have the opportunity to inform themselves concerning these requisites. Because of the fact that the pests which commonly attack fruits to a serious extent are comparatively few in number, spraying operations can be largely confined to more or less definite times. The materials to be used and the time of their application form what is popularly known as a "spraying program." Even with the spraying program the grower must study his conditions in order to apply it most successfully.

In giving a program for spraying common fruits it must be clearly understood that there are certain pests which are not controlled by the application of the materials recommended. Certain pests demand special treatment.

Common pests of the apple are codling moth, aphis, curculio, scale insects, apple scab and fire blight.

Fire blight is first noted by the leaves at the tips of the branches turning a reddish brown. This discoloration extends downward along the branches as the season advances. A close examination will reveal a blackened, shrunken and frequently shriveled appearance of the bark. When peeled off the inner portions will be found to be discolored. This brown discoloration will often be found to extend beyond a point where the bark shows any sign of the disease on the outside. It may also appear as sunken or "cankered" areas on the trunk or larger branches.

The disease is most prevalent on rapidly growing trees, although there are varietal differences as to resistance to attack. There is no spray for the control of fire blight. Cut out the infected twigs six to eight inches below any sign of the disease and burn. Cut cankered areas back to healthy bark. Disinfect the wound with corrosive sublimate or formalin and treat as for wounds in pruning. It is best to disinfect the knife after removing the infected part by dipping it in strong formalin or corrosive sublimate. The latter is a deadly poison requiring care in handling it. The other pests may be successfully controlled by spraying, accompanied by orchard sanitation.

If trees are seriously infected with scale insects spray with lime sulphur shortly before growth starts. To make a fifty-gallon barrel of material for this spray use from five to five and one-half gallons of commercial lime sulphur to which is added enough water to make a barrel of material.

If plant lice were prevalent the past season spray with 40 per cent nicotine sulphate (Black Leaf-40), one part to 1,000 parts of water (one pint to 125 gallons of water) to which should be added three pounds of soap in solution. Apply just after buds begin to show green.

The regular annual spraying of the apple will consist of four applications: (1) spray with a fungicide and arsenate of lead when blossoms show pink (add nicotine sulphate if plant lice are present); (2) spray with (1) from three to five days after most of the petals have fallen; (3) spray with (1) about ten days to two weeks later; (4) spray with (1) on late varieties about June 20th to 30th, depending on location and whether season is relatively early or late. In seasons favorable for the development of fungous diseases an additional application should be made between the third and fourth.

Either lime sulphur or Bordeaux mixture may be used as a fungicide. Bordeaux is probably preferable for all applications except the second and

A SORRY LOOKING MESS OF FRUIT FROM UNSPRAYED TREES.

MUCH MORE THAN HALF THIS FRUIT IS CLEAN.

DAISY Cultivator Shields

Save You Time--Make You Money

The shields you've been looking for. Scientifically designed—work right all the time. Need no attention. Cannot get out of adjustment—cannot gather up and drag stalks and trash. Circular in shape—revolve like a wheel and work perfectly in any soil. Save you time and labor—make you money in better corn.

100% Efficient

Daisy Shields absolutely prevent clods from falling on the hills--enable you to plow small corn one-fourth faster. Clods are thrown AWAY from the row--fine dirt passes through shields and covers up weeds. No time and labor lost uncovering corn—no hills injured. You can plow corn "first time over" as fast as the horses will walk.

Fits Any Cultivator

These shields will fit YOUR cultivator, regardless of what make or model it is, and will satisfy you. More than 100,000 are in use. Write for folder and complete information. SEND YOUR DEALER'S NAME. We will arrange to ship a pair for your inspection and approval at once. Don't buy until you see them.

third. Used at that time, it is likely to cause russeting of the fruit.

Lime sulphur should be applied at the rate of one and one-half gallons of commercial lime sulphur to fifty gallons of water. Bordeaux mixture can be made after any one of a number of formulae. The 4-4-50 formula is as satisfactory as any.

There are a number of formulae for preparing Bordeaux mixture. The following method has given good results in work carried on by the Wisconsin station:

Blue vitriol (copper sulphate)	8 pounds
Lime	8 pounds
Water	100 gallons

Dissolve the blue vitriol in a barrel and dilute to fifty gallons. Slake the lime, being careful to avoid "drowning" or "burning." When thoroughly slaked dilute to fifty gallons. Dip from the two barrels and pour together through a gunny sack or other strainer into the spray tank or barrel.

Where a large number of trees are to be sprayed it will be found best to prepare a large quantity of the material at one time. This can be done providing they are not mixed until ready for using. These stock solutions may be prepared as follows:

To make the stock solution of blue vitriol suspend forty pounds of blue vitriol in a burlap sack in forty gallons of water. Hang it well up from the bottom of the barrel. In about five hours the crystals will be dissolved. One gallon of stock solution equals one pound of vitriol. Do not allow this solution to stand in tin or iron receptacles. Keep the barrel tightly covered to avoid losses by evaporation. Mark the height of the liquid in the barrel if it is to be left standing for a time before using. The material should be brought to this point before using by adding water.

For the stock solution of lime slake forty pounds of lime. Add about two pailfuls of water at first, and then allow lime to heat well before stirring. When hot add more water slowly as it is absorbed and still thoroughly. The hot lime improves by standing about one hour if stirred frequently. Add water to make forty gallons. One gallon of stock equals one pound of lime.

These stock solutions can be kept for considerable periods and Bordeaux made as desired. To prepare 100 gallons of Bordeaux, stir the stock solution thoroughly, measure eight gallons of blue vitriol stock solution into a fifty-gallon barrel and fill with water. Measure eight gallons of lime stock solution into another barrel and fill with water. Stir both thoroughly. Strain equal amounts of each solution at the same time through a gunny sack or strainer into a third barrel, two men pouring, or run the mixture through a trough or spout into the spray tank.—[Wisconsin Bulletin.

La-Crosse County Guernsey Meeting.

The La Crosse County Guernsey Breeders' Association held their annual meeting at West Salem March 7th. About fifty breeders were in attendance and a banquet was served at one o'clock which was enjoyed by all. La Crosse county is one of the foremost in this state as headquarters for cattle of the above breed and all that is needed is a little more co-operation on the part of the members to give it a national reputation. This was a get-together meeting and to formulate plans for a publicity campaign. A summer picnic will be held perhaps in June and a novel feature is being arranged for that time. The day will be devoted to Guernsey cattle and will be called "Guernsey Day." Breeders have promised to furnish individuals and a show will be held and the cattle will be judged by a competent breeder who will also give a talk on the Guernsey cow and her various points. This will indeed be an educational feature and the committee in charge is to be congratulated on their original idea. S. L. Dudley, West Salem, was elected president; H. M. Bonsack, Onalaska, treasurer, and T. H. Campion, Onalaska, secretary. Prof. G. C. Humphrey, Madison, gave an excellent talk on "Reasons for Community Breeding." He brought out many facts of vital interest to pure-bred breeders and dairymen. It was a very successful meeting in every respect. All those in attendance took active part in the discussions and we believe that the La Crosse county Guernsey breeders are going to be in a position to do things in the very near future.

Europe's many tongues and consequent misunderstandings

The Fruits of Understanding

Throughout the vast area of this country prevails a common tongue. The whole of Europe hardly exceeds our territory, yet Europe has more than a score of nationalities and many different languages.

In the United States the telephone, as exemplified by Bell System, renders a matchless service in its mastery of distance and in encouraging the use of a universal language. This accomplishment is in spite of the great influx of population from every country in the world.

In Europe the independent countries, separated by barriers of language, and lacking efficient telephone service, suffer from inadequate facilities for inter-communication.

We now talk from the Atlantic Coast to the Pacific, and eliminate more than three thousand miles. In Europe, contending with a babel of voices and unrelated telephone systems, a bare quarter of that distance has been bridged with difficulty.

The ideal of the Bell System has been day by day to extend its service in the interest of all telephone users. Its efforts have resulted in providing the facilities to unite cities and rural districts in true American democracy.

ILLINOIS SEED & NURSERY CO., 233 MAIN ST., MAKANDA, ILLINOIS

Some Good Hogs.

To the Editor:—I shipped a load of sixty-nine head of eleven-months-old hogs of my own raising to Chicago last week. They sold at $12.50, which netted me $2,260.19.

The above hogs were run on clover pasture during the fall, with very little corn, were put on full feed December 1st and fed for sixty-nine days, making an average gain of one and one-half pounds per day. During the sixty-nine days they were fed 760 bushels of corn and made a gain of 7,141 pounds, realizing a little over $1.11 per bushel for the corn fed during the fattening period. These hogs averaged at home 277 pounds.

"Any Boy Who Can Use His Feet Can Run It"

SOME one asked J. M. Damron of Alleghany how he likes his new Janesville Cultivator. His answer was: "It would be hard to beat. We get a good stand and can keep it. Any boy who can use both feet can run the Janesville with ease. We can do good work and do it in comfort."

And that's one of the big things in good farming—do good work in comfort. We carried out this idea in designing the

JANESVILLE Cultivator

Manufacturers of Farm Implements

You guide the gangs with your feet. Good levers pivot the wheels in any direction. Easy—simple as A B C. Spring pressure behind each shovel insures proper depth. Cushion spring brings the wheels back to straight position. Allows easier guiding and steady running in either straight or crooked corn. Shield is extra long and wide so that no moving soil can bury small plants. Adjust the shield without leaving your seat.

Two models—Big Janesville with wheels 42 inches high—little Janesville with wheels 32 inches high. All Janesville cultivators have sleeve axle adjustable to wide or narrow tread.

Also, the Janesville Balanced Gang Cultivator, with weight of operator acting directly upon shovel gangs. Wheels on all Janesville Cultivators are equipped with removable dust-proof boxings, lubricated by filling hub caps with grease. One or two row cultivators.

Electric Light and Power on Farm.

Modern System Today Has Dissipated Gloom Around the Farm Home.—By P. J. McKee.

THE picture with this article shows what is apparently just an ordinary farm, a nice house and lawn and good barn, and yet to one who pays a visit to this farm and keeps his eyes open, there is a considerable difference between it and the average farm. This is principally on account of the fact that they modernized this farm by putting in electric light and power. The farm is six or seven miles away from the nearest town or city, so that there is no electric line running through the country, and the nearest interurban line is about four miles away, but out in one corner of the woodshed, off in a little room by itself, there is a little machine that generates enough current to light up every room and hallway in the farm house and all of the barns and other outbuildings on the place. This little machine consists of a single-cylinder engine and an electric generator, all combined in one compact unit. Besides this machine, there is a storage battery sitting on shelves along the wall and by means of this it is possible to have electric light and power at any time of the day or night, whether the engine is running or not.

THIS FARM HOME ILLUMINATED BY HOMEMADE ELECTRICITY.

One would not think that a little plant like this could turn out electricity in the same way as the great, big power houses in the cities, but this one does. It turns out as much and more current than they can use on this farm, and it is just as reliable as service from the city power house. The little engine is run two or three times a week and each time it runs the battery is charged up full. Kerosene is used as fuel, which brings the cost of the electric current down to just about the same price as you pay in the city.

There are forty-two lights in the house and barn. The fixtures are all of the best design and the lamps are good, strong ones. In addition to this they have what are called three-way switches, by means of which a light can be turned on or off from two different places. For instance, when one wants to go upstairs at night, he pushes a switch at the foot of the stairs and the light is turned on in the upper hall. If he wants to turn that light off after he gets upstairs, there is a switch in the upper hall which he can use. The chandelier in the hallway downstairs can be turned on in the same way from the second floor, and this is a very good thing at night. As everyone knows, plenty of light is one of the best protections the house can have.

Lights are placed in the barn wherever they can be used, and they have eliminated the danger of coal oil lanterns entirely. Out in the barn it is not only a question of having the conveniences of electric light, but one of considerable time saved in the work. The owner of this farm tells me that it only takes him half as long to do his chores under the electric light as it used to take him with coal oil lantern, and this fact in itself is one which makes the electric plant well worth considering to every farmer.

In addition to the inside lights on this farm, there are two outside fixtures which serve to light all the barnyard and ground. One of them is so placed that it lights up the back of the farmhouse, part of the barnyard, and even the driveway out to the road in front of the house. The other one is on one side of the barn and serves to light up that half of the barnyard. The owner tells me that he gets as much satisfaction out of these lights, which he only uses for a few minutes at a time and doesn't use every day, as out of almost any of the lights on the place.

In addition to lighting, the current from this little plant is used to run electric fans, a vacuum sweeper, a churn, washing machine and several other light power appliances.

Give Your Boy the Right Start In Life

Send him to Montana, the land of golden promise and golden reality, where millions of acres of rich land await industrious men to turn them into profit paying farms.

Here is virgin soil that will produce twice the crops of middle west land yet costs from one-third to one-half less. A splendid climate, good schools and churches, everything that makes for a healthy, wholesome, independent life.

Montana is making a record for progress and prosperity. Recently the "*St. Paul Road*" at an expenditure of $12,000,000 accomplished the first extended railway electrification in history—electrifying its main line across the state for 440 miles. This gigantic achievement is to help increase industrial activity, thereby broadening the farmers' market, improving land values and enhancing living and traveling conditions.

Fox River Valley Breeders Meet.

Holstein Association Has Seventy Present This Year and Adds Many New Members.—By E. O. Mueller, Sec'y.

THE Fox River Valley Holstein Breeders' Association held its seventh annual meeting February 24, 1917, at the city hall, Neenah, Wisconsin. Last year there were not more than ten or fifteen present for such an important association. But at this meeting there were seventy members present and quite a number joined the association, which shows that interest is growing. The morning meeting was given to routine business and officers were elected as follows: President, Edward G. Race, Omro; secretary-treasurer, Edward O. Mueller, Appleton; executive committee, Fred Ziegler, Appleton; Louis Sorensen, Larsen; Frank Puth, Appleton; Geo. Schaefer, Appleton; committee on resolutions, Frank Puth, Appleton; C. B. Ballard, Appleton; F. W. Plamann, Appleton; F. A. Ziegler, Appleton; A. Calder, Allenville.

The secretary read a letter received from the Wisconsin Department of Agriculture submitting a plan for the establishment of accredited tuberculin-tested herds. Following a short discussion the letter was referred to the committee on resolutions.

The secretary read another letter received from the Wisconsin Live Stock Breeders' Association calling its attention to the urgent need of a representative to represent the live stock breeders and farmers of this state at the present session of the legislature. Also stating that at a recent meeting of all the breeders' associations it was decided to send Geo. McKerrow to the legislature and asked for a contribution from the association to help defray the expenses of the representative. The letter was referred to the committee on resolutions. Following this the convention adjourned to the Valley Inn, where a fine dinner was served. The members of the association were guests of the business men of the city. Hon. S. A. Cook, Neenah, Wisconsin, was chosen to preside.

Mr. Cook was an ideal toastmaster. He told many good stories during the introduction of the various speakers.

R. J. Schaefer, the retiring president of the association, was called on to respond to the words of welcome. He stated that the business men of the county were present to thank the business men of the city for making it possible for them to have such a fine place to meet and for furnishing them the banquet they were enjoying. Mr. Schaefer declared that the city and country people are too far apart. There should be a greater co-operation. The city needs the farmers and the farmers need the city. The city should not be afraid to ask the country brothers to assist them in promoting anything good for the community, nor should the farmer fear to join his interests with the city. He extended a cordial invitation to the city people to visit the farms of the Holstein breeders at any time of the year and assured them that they would be sure of a drink of good Holstein milk.

Following the feast the convention was again called to order by the president and the committee on resolutions reported as follows:

To the Fox River Valley Holstein Breeders' Association. Gentlemen, your committee on resolutions beg leave to submit the following relative to the communication read by the secretary.

First.—Be it resolved by the Fox River Valley Holstein Breeders' Association in annual meeting assembled, that we approve of the plan of the department of agriculture relative to the testing of cattle for tuberculosis. We believe it is a forward step in the right direction and should be taken advantage of by everyone interested in protecting and improving the herds of the county and state.

Second.—Be it further resolved, that in behalf of the interest of the live stock breeders and farmers of this state and association we are interested in having every important matter represented in the present session of the Wisconsin legislature, and be it further resolved, that the secretary and treasurer of this association be authorized to subscribe its share toward defraying the expense of Geo. McKerrow as such representative.

Third.—Be it further resolved, that a vote of thanks be tendered the business men of Neenah, Wis., for the splendid entertainment and good fellowship shown this association.

Respectfully nominated.

Frank Puth
C. B. Ballard
F. W. Plamann
F. A. Ziegler
A. Calder

Following the banquet Mr. Geo. F. Comings, of Eau Claire, Wisconsin, delivered an address on "The Advantages of Co-operative Breeders' Organizations." He strongly advised cow-testing associations because the buyers of pure-bred and grade cattle at the present time are demanding stock that has been tested for butter production and also stock which is out of tested stock. With the increasing demand for clean cattle free from tuberculosis he advised that the breeders co-operate with the department of agriculture in getting a reliable man to tuberculin test their herds, thereby insuring their herds free from disease and putting Wisconsin on the map as a clean state.

Plans For Raising Calves.

Probably the best way for the dairyman to maintain and build up his herd is to raise his heifer calves. If his foundation cows are good producers and if he uses a tested sire he can be reasonably sure that the heifer calves will be good producers. But with the fast advance in prices of land and farm products, the expense of raising the calves is increasing. When the young were allowed to suckle their dams no such conditions existed, but this practice is no longer economical.

L. W. Wing, Jr., of the Missouri College of Agriculture, outlined two general plans for reducing the cost of producing calves, in a lecture during Farmers' Week at the University of Missouri this year. Where cream is sold he suggested that the calves be fed whole milk for the first two or three weeks and then gradually changed to skim milk. The whole milk should not be fed, even to the largest calf, in excess of three quarts, or about six pounds, at a feed twice a day. The small calf, such as a Jersey, does not need more than two quarts at a feed. When larger amounts are given, scours are apt to result. After the calf has been changed to skim milk the amount may be increased gradually to fourteen or sixteen pounds a day. Such feeding should be supplemented with grain, preferably ground corn or a mixture of three parts of corn and one part of oats by weight. Calves should be allowed to nibble hay as soon as they begin to eat grain. Timothy or mixed hay should be fed during the first two or three months. Then some legume, alfalfa, clover, or cowpea hay, may be given.

The farmers who sell whole milk have another problem. Experience has taught that the only method of replenishing a herd and advancing production is to raise the heifer calves. The plan in general use at present is to feed a minimum amount of milk along with grain, or to give the calf a good start and take the milk away after about two months, and then put the calf on a grain ration.

Many attempts have been made to find milk substitutes. Oil meal, blood flour and wheat middlings or flour have made up the major portion of most of them. Those which have proved most successful have contained a small portion of powdered skim milk. When they are fed, whole milk is given for about the first month and the calves are gradually changed to the calf meal. This is fed as a gruel which has been previously heated to 145 degrees F. for one-half hour and cooled to about 90 degrees F. at feeding time. The amount fed depends upon the size of the calf, but should not be in excess of one and one-fourth pounds per feed twice a day. One should have had experience in raising calves before trying this method. Such feeds enable a man selling milk at a high price at retail or wholesale to raise his calves more cheaply than he could by feeding fresh milk.

Dealing With Ugly Cows.

To the Editor:—We do have to face problems of ugly cows at times. Just as there are men who are hard to get along with, so there are cows that by reason of their naturally nervous temperament or because of some past ill treatment have become difficult to manage. The question what to do with these cows is pretty serious sometimes. They may be good cows for the dairy, long and deep milkers and giving milk that is rich, but they are kickers or have the habit of fighting other cows in the yard or are addicted to some other bad habit.

In the past I have done my share of fretting over such cows. They are provoking, no doubt about that. They have a bad effect on the other cows in the herd, just as a peevish child will keep the rest of the little ones in a state of turmoil.

The temptation always is to be harsh with these wayward cows, to punish them, often cruelly. Farm animals have to suffer a great deal from their masters or from hired help. But the passing of the years has impressed a few things very forcibly on my mind. One of them is that it never pays to get mad and whip or otherwise abuse an ugly cow. She will only be the worse for it and meet your force with her force, and it resolves itself into a pitched battle for the mastery. No man ever enters such a struggle that he does not come out of it a worse man that he began. All the bad elements of his nature get the ascendancy and if he conquers the cow he has defeated himself, which is the worst of it all.

Then, too, it is rarely necessary to be harsh with the worst of cows. If we let them know from the start that we are friends and not enemies they will be, in time. It takes patience to do this. Some men never ought to be given an ugly cow to milk or handle in any way. They are so apt to lose their temper and scold or yell or strike the cow that happens to cross their will that it is simply throwing oil on fire to allow them to touch such an animal. Give her to the most quiet, even-tempered man in the stable.

In almost every case it will be found that the bad cow has been made so by something she has had to contend with. It may be her teats are tender and the milker does not keep his nails trimmed down. It may be long hairs are permitted to grow about the teats. These get pulled by the hands of the milker and they do not

Please mention this paper when writing

make the cow feel very comfortable. It may be the milker pinches the teats too hard when they are swollen with milk. Or something comes in contact with the body of the cow somewhere that does not feel right, and she resents it in the only way she can. So it always pays to find out if we can what makes the cow cross and to remove that cause so far as we can. Often by taking a cow out of the place she has occupied in the stable and putting her in a new and roomy stall, with a new and kind milker, she will in a little while become a new cow in her manners.

But if we cannot by any of these means gain the confidence and so the mastery of our cows, we might better let them go. Life is too short and peace of mind worth too much to be sacrificed in battling with any farm animal. F. L. V.

Milking Machines Save Time and Labor

In producing the mechanical milker inventive genius has again come to the farmer's aid and solved one of his most serious problems. Scarcity of efficient labor has long been a menace on farms where milk cows are kept and the drudgery of hand milking has discouraged many in the dairy business. But the milking machine is marking a new era for the dairy farmer and his work is being made more profitable and pleasant.

Among the most important benefits from the milking machine is a marked saving of time from their use. The federal department of agriculture has found that in large dairy herds of more than fifty cows it requires nearly seven minutes per cow to milk by hand, while only four and one-fourth minutes are required to milk by machine. In smaller herds of fifteen cows or less it requires seven minutes to milk by hand and a fraction less than five minutes to milk by machine. Although the saving is less for the small herd, it may still be valuable in relieving a considerable amount of labor during the busy season that could be put to other urgent work. It was found that with herds where three men were formerly required to do the milking, two men could do it with a machine. This means the saving of the wages of one man, since in ordinary dairy farming two men can raise the crops and otherwise provide for the same number of cows that it requires three men to milk.

When wages of hired labor are considered the cost per year of hand milking varies from about $10.45 per cow in herds of fifteen or less to about $10.90 per cow in herds of fifty or more. For machine milking the cost is $11.75 per cow in small herds and $7.35 per cow in large herds. This shows a big saving by the machine in the large herds. However, it does not indicate that machines are unprofitable in small herds, since a man may be kept primarily to do the milking when his services are not really needed otherwise, and by installing a milking machine he could be dropped and his entire wages saved. When all factors are considered the milking machine is found to save from $2.65 to $8.35 per cow per year.

In addition to this saving of time and money the mechanical milker removes a great deal of drudgery from the farm dairy, which is no small item in its favor, and the success which it has met with already indicates that it will soon come into extensive use, especially in dairying regions.

Uses Kerosene Tank Heater.

To the Editor:—In regard to inquiry about a gasoline tank heater, I have used a coal oil heater all this winter with very good success. It requires no attention whatever and is free from danger of fire. When I use it steadily I use only a gallon of oil every thirty hours except in very severe weather and then it burns twenty-four hours easily.

The tank I use it in is a very large one, sixteen feet long, seven and a half feet wide and two feet deep. I have not been troubled with ice in any way and the stock drink much more water and keep in better condition than they have any previous winter. John A. Lynch.

Uses a Two-Pole System.

To the Editor:—In answer to Mr. A. C. Stockdale's inquiry about stacking hay with poles, I use two poles about forty feet long. I first set two good posts about 140 feet apart. Then I take guy rope 175 feet long, find center and give same a double half-hitch around top of poles. Then take a chain three feet long, put through crotch of poles to hold pulley in place that raises the hay, and put in rope

TWO POLES AND TWO GUY WIRES.

on fork. Spread poles thirty feet at bottom. There should be holes dug about one foot deep to set the poles in to prevent them slipping on being raised. I use a jin pole fourteen feet long. Tie one end of guy rope to post. Use block and tackle to raise with. When the poles are raised, give the guy ropes slack enough to swing hay full length of stack. Set post about eight feet from hay pole to right. This is to chain pulley to. Subscriber.

See the Difference
BETWEEN THE
NEW DE LAVAL
AND OTHER
CREAM SEPARATORS

YOU can *see the difference* between a NEW DE LAVAL and any other cream separator right away.

And five minutes spent in comparing the bowl construction, the size, material and finish of all the working parts, the manner of oiling, the tinware and the frames, will surely convince you of the superiority of De Laval construction and workmanship.

Then if you go a step farther and turn the cranks of the two machines side by side for fifteen minutes, running milk or water through the bowl, you will see still more difference.

Every New De Laval is now equipped with a Bell Speed-Indicator, the "Warning Signal" which insures proper speed and uniform cream.

Speed Indicators can be furnished for use on old style De Laval machines at a cost of $3.00 each.

And if you will run the two machines side by side in practical use, as any De Laval agent will be glad to have you do—the De Laval one day and the other machine the next—for a couple of weeks, you will see still greater difference in the work of the two machines.

There is a De Laval agent near you who will be glad to explain all the improvements and advantages of the NEW De Laval, and who will set and start a machine for you on your farm and let you *prove the difference* for yourself.

Why not see the nearest De Laval agent at once? If you do not know him, write to the nearest office for any desired information.

New Catalog will be mailed upon request

FARM LANDS.

NORTH Dakota in all essentials—soil climate, crops, people, is a second Iowa. Because of heat, wet and rust the 1916 grain crop of North Dakota was short, yet government reports show $167,544,000 or $2,253 per average farmer. In last 7 years average farmer in North Dakota produced $1975 worth of crops; in South Dakota, $1,639; Iowa, $1,631; Illinois, $1,437; Minnesota, $1,396; Wisconsin, $901. Now is time to get North Dakota land, while price is low. No commission to us. Great opportunities open. Write for our direct dealing plan, booklets, maps, etc. J. S. Murphy, immigration agent, Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minn.

YOU can read ads all day and no where can you find such a chance as our company offers you, such rich soil, abundance of nutritious grasses, with just enough timber and water, with prices so low, terms so easy, and locations so favorable as our Aitkin county dairy lands afford. Look on the maps. See where Aitkin county is, in Minnesota's great dairy district where clover grows everywhere. Send address for literature today. Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minn.

GET a farm home in rich corn and clover belt of Northwestern Wisconsin along new Soo Line, 50 miles St. Paul-Minneapolis. Landseekers all say: "I saw nothing better." You'll like this wonderfully prosperous stock and dairy region too. Rich soils, hardwood timber, plenty rainfall, healthful climate, beautiful lakes, fine schools. Creameries everywhere. $15 per acre and up. Map and list free. Baker N-110, St. Croix Falls, Wis.

FARM of eighty acres, good buildings, ¼ mile to school, 1½ miles to creamery, about 30 acres under plow, 10 more ready, balance easily cleared, and good pasture, 6 miles west of Medford, Taylor county, Wisconsin, county seat. $6,000, will take in exchange to the extent of $3,000 first-class city property. Will rent three years at $325 per year. L. A. Kimball, Lake Geneva, Wisconsin.

HERE IS YOUR CHANCE—Get a home; $1.00 per acre down and long time on balance. Hardwood timber land with timber enough to pay for the land and build your buildings, close to market, school and cheese factories. Clay loam soil all tillable. Taylor Co., the clover and dairy belt of Wis. Rib River Land Co., Medford, Wisconsin.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

EIGHTY-ACRE FARM for sale cheap. Close to town and school. Fair buildings and about 3 acres cleared. Choice Clay loam soil. Considerable green hardwood timber which will go a long way toward paying for the farm. Price $25 per acre. Very easy terms. Address Box "J," Ladysmith, Wisconsin.

FOR SALE—80 acres unimproved land about two miles from Prentice, Wis. Rich clay loam soil; land easily cleared. Small creek runs through part of land. A bargain at $1,300, with only $500 cash, balance on easy terms. For full information address H. S., 873 Buffum St., Milwaukee, Wisconsin.

40 ACRES cheap. 5 acres cleared; balance firewood; nearly level; clay loam soil; log buildings, creek; 2½ miles to cheese factory; $550.00, cash $200.00; Ev. Luth. Colonization Co., 1028-M, Dept. 10, Merrill, Wis.

READ THIS!—Would you sell your farm, if you got your price? No agents' commissions. No middle-man to take big profits. You can do it. Particulars free. Address Charles Renich, G-2, Woodstock, Illinois.

A 40-acre farm for sale; 30 acres under plow; sold reasonable. 4 miles from town, 1½ miles to school and to cheese factory. All stock in 4 miles east of Clintonville. F. K., R. 4, Clintonville, Wisconsin.

TWO farms for sale, easy terms, on main road; telephone, R. F. D., etc.; good buildings; will rent one to right party. Henry Wilson, Ladysmith, Wisconsin.

FOR SALE or exchange for wild land in southwestern Nebraska, live stock farm of 760 acres 2½ miles from town. Write Albert Ferdon, Pittsville, Wisconsin.

PAINTS.

STOP buying high-priced paints. Smith Bros.' refined Fish-Oil mixed with any desired coloring, produces a paint that will outwear all others. Better and cheaper than linseed oil; 60 cents per gallon. Write today for particulars, etc. Smith Bros., Port Washington, Wis.

Potato Growers Meet.

The Cedar Lake, Barron County Potato Growers' Association held its annual meeting Friday, February 17th, at the Mikana town hall. The association enjoyed the presence of Prof. J. G. Milward, of Madison, and also his illustrated lecture. This association has a poet and he presented the following at the annual banquet:

Barron county is on the map,
In spite of every handicap;
It raises potatoes smooth and white,
That look to the judges just about right.

In Barron county in the fall,
They harvest spuds that beat them all.
When R. L. Cuff and his good wife
Go after potatoes with their left and right,
Barron county gets into the limelight.

A. T. Johnson has taught us a lesson
With his true Green Mountain type;
And modern methods, beyond a question,
Of raising potatoes are all right.

Gust Kringle is a potato grower
With a mighty good reputation,
Of raising Burbanks' long and smooth,
That can meet every qualification.

Then we have Ed Kringle,
With his Rurals, smooth and white,
Which are always in the money
At the big shows, every time.

E. H. Thompson raises Rurals
That are round and smooth and white,
Which won fist at every exhibition,
No matter how keen the competition.

The Cedar Lake Potato Growers' Association,
Of only one year's duration,
Should view their success with high elation,
For they have an enviable reputation
Of selling spuds throughout the nation.
—Potato Growers' Poet.

The association listened to speeches by M. Kringle, A. T. Johnson, E. H. Thompson, Gust Kringle, C. Markwald, E. Freeze and the county agent, Mr. R. L. Cuff.

The Cedar Lake association claims to have won more prizes during the past year than any other potato growers' association in Wisconsin. This association has done a great deal toward improving the quality of potatoes in Barron county.

SAVE YOUR CHICKS

WE CAN help you. Send us the names and addresses of (10) poultry friends and receive our revised 32-page book on "White Diarrhoea the Greatest Foe to Chick Life." This book makes Poultry Profits possible. Gives care and feeding of chicks and turkeys, how to prevent cnicks from dying in the shell, also cause and guaranteed cure for bowel trouble. POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Packing Eggs For Hatching.

To the Editor:—Someone asked about packing eggs for shipping and I want to tell about an advertiser of whom I bought 200 Red eggs. He had corrugated carriers like an egg case. The eggs were wrapped in paper and placed on end promiscuously. They were clean and looked fresh, but shook like rotten eggs. However, I set them. There were 157 without even a sign of fertility. They were packed on the large end and the contents shaken through the air chamber.

He replaced the 200 at half price. I asked for them to be packed little end down or in a basket on the side, but he paid no attention and in the first layer sixteen out of twenty-five were packed on the large end and shook. I just returned the whole shipment to him.

I may not know much, but eggs will not hatch after the air chamber has been broken or pierced. I use baskets and plenty of excelsior and wrap each egg separately and lay it on the side. Sometimes a small order is packed in a box of bran. I, for one, would rather pay for three baskets of well-packed eggs than have so many spoiled by packing closely on end. Then, too, it all goes by weight, not by piece. Ship by express, parcel post is too jarry yet for hatching eggs.

I hope this idea will help the lady with the duck eggs. Fannie Daun.

Brooding and Feeding Baby Chicks.

Millions of baby chicks will die this season because of wrong methods and mistakes made in brooding and feeding. Eggs are higher and chicks will be scarcer and higher than in most preceding years. It behooves every poultry raiser to use such methods as will insure the lowest per cent of mortality and the quickest growth.

Brooder stoves of many kinds are upon the market. The coal-burning brooder stoves are the kind with which we have had greatest success, and are those which seem to be giving most general satisfaction in the hands of most poultrymen. We know of some who use two of these stoves of small size in one room. Then, if one stove goes out the other will protect the chicks and prevent chilling.

Most of these stoves have a capacity of from 150 to 500 chicks. Some can hover as many as 750 chicks. We prefer to use about 300 to 500 chicks with one stove. We build a house 10x20 feet, 12x24 feet, or 14x28 feet. The house has a partition in the center with a runway on the chicks and a swinging door for the attendant. The stove is placed on one side of the partition and the cool room is used for feeding and exercise. It is necessary to have a cool room, so the chicks can get away from the heat. This is one of the secrets of successful brooding.

The house for these brooder stoves is built just as we would build any laying or breeding house. We would not build a special brooder house which we could use only three or four months during the year and then let it remain idle for the remainder of the time. Every poultryman should endeavor to have as little idle equipment as possible. We build these houses of the dimensions mentioned above. We locate them where the chicks can have plenty of range after they grow up. As soon as they are old enough to do without heat, we simply remove the brooder stove and put in temporary roosts. The chicks remain right in this house until the next fall or winter, when it comes time to cull them and to select the choicest for the laying and breeding pens. A flock of pullets is usually wintered in these houses. Nests can be put in temporarily until the houses are needed again for the next season.

By handling the chicks in this way you avoid handling them so often; they are accustomed to their quarters and you do not check their growth by moving. Furthermore, you are getting the benefit of your equipment throughout the year. It is easier and better to move the stove to another house than it is to have the chicks and have the house vacant.

Tack cloth over the ventilators and make the house comfortable, and provide for ventilation near the floor, but avoid drafts. Be certain to provide for one cool room. If the chicks have a tendency to cannabilism and pick at one another's toes, paint the window panes with a bluish or whitish frosting. You want light in your brooder house, but not the direct rays of the sun. Keep the chicks busy and active. Put some fresh earth on the floor in one corner of the room. If they show signs of developing the habit of picking at one another, grind some lean meat and mix equal parts of bran, shorts, corn meal and ground meat with a little water, just to moisten it a trifle. After it is mixed, run it through a sausage mill or meat grinder and then feed it to the chicks each day. The frosted windows will do most to prevent cannabilism. You will not be troubled with the chicks piling up and crowding at night in a room where you use these brooder stoves, if your room is kept warm enough.

Don't feed the chicks until about forty-eight hours after they are hatched and dry. One of the first things should be sour milk or buttermilk and coarse sand. Cover the floor of the brooder with clover chaff or fine-cut straw. Don't have this too deep. For the first two or three days feed a mixture of two-thirds rolled oats, one-third wheat bran, mixed with hard-boiled eggs and a little powdered charcoal and fine bone meal. Feed a little about five times a day for the first three days. Then begin to give two meals a day of commercial chick feed. The first mixture is fed morning, noon and night, and the chick feed between meals. As they become older, gradually eliminate the rolled oats until you use only the chick feed, and keep before them a dry mash mixed in the following proportions:

Wheat bran	10 lbs.
Shorts	5 lbs.
Corn meal	5 lbs.
Ground oats	2.5 lbs.
Fine charcoal	2 oz.
Fine salt	2 oz.

If you cannot secure sour milk, buttermilk, or milkoline, then mix two pounds of dry beef scraps with the above. If you use any form of milk, keep it before them at all times, or at least the first half of the day. They need some green food. Use clippings from sprouted oats, or cut up some onions occasionally. The above methods have proved simple and successful.—[T. E. Quisenberry, Leavenworth county, Kansas.

WHEN you gentlemen get together at your lodge meetings, somebody is pretty sure to start the little pouch of W-B CUT up the line for his brothers. It's conducive to brotherly feeling. There is gratitude for the *rich* tobacco that makes a *little* nibble go so *far* and for the touch of salt that brings out the *tobacco satisfaction* without so much jaw work.

How To Succeed With Poultry

FOY'S BIG BOOK FREE

POULTRY AND SQUABS FOR PROFIT. An encyclopedia of poultry information. Written by a man who knows. Leading varieties of poultry and pigeons in natural colors. Low prices on fowls and eggs. FRANK FOY, Box 88 CLINTON, IOWA

Did You Have "Good Luck"

With Your Chicks?

"Luck" with chicks starts with the incubator. If it is properly heated, properly regulated, and properly ventilated, your chicks will start off with vitality. They won't come out of the shell half dead. So many people trust their eggs to a cheap machine, forgetting that it is not only how many you hatch that counts, but how many live and grow.

Start Your Chicks With a Queen Constitution

The Queen has a reputation for hatching strong, healthy chicks. It is built of genuine Redwood—very scarce in these days of cheap substitutes. Redwood does not absorb odors from the hatching eggs. Cheaper woods, and pasteboard lining in iron and tin machines, retain the odors to weaken and kill the hatching chicks.

Queen incubators are not cheap, but they are built to hatch big hatches of chicks that live. Book sent free.

Queen Incubator Co., 1175 N. 14th St., Lincoln, Nebr.

HICKORY
KELLEY-HOW-THOMSON CO. DULUTH MINNESOTA
Guaranteed Paint

The Hickory Dealer Says:

Mr. Atkinson, of Superior, Wis., intended sending $10 away for paint for this house. Martin Erickson, the Hickory dealer, furnished Hickory paint and oil at regular price, total cost $8.75. Also saved Mr. Atkinson freight of about 75c. This house was painted 6 years ago and is in perfect shape today.

Hickory Costs Less Because It Spreads Farther

Two gallons of Hickory paint, with oil added, will go as far as four or five gallons of cheap paint to which no oil can be added. Hickory paint, with all its quality, costs less by the job. Prove it by getting a quotation on Hickory guaranteed paint for your house or barn.

See the Hickory Dealer in Your Town

or if there is no Hickory dealer, write us for FREE color cards and Paint Talk book, which gives you *money saving facts* on painting. Tells you why Hickory contains no acid or other impurities—why it spreads farther and holds the oil or "life" for years.

Whether you do the painting yourself or have it done, *Hickory will save you money.*

"Common Cold" a Serious Disease.

The common cold, the most prevalent illness in the United States, is really a disease group included under one name. Our universal familiarity with this condition has bred a contempt which hides its seriousness, yet when the sum total of the ravages committed by common colds is made, it becomes evident that instead of being a group of trivial affections, common colds must be classed as serious diseases and for this reason the United States Public Health Service has issued information on the prevention and care of this widespread disorder.

The phrase "common colds," like "charity," covers a multitude of sanitary sins, and, curiously enough, the name has been applied to a group of affections which far from depending absolutely on cold are frequently the direct result of living in close, overheated surroundings having a lower relative humidity than the dryest desert known to man.

The word "cold" means an acute infection of the lining membranes of the nose, tonsils, throat and larger bronchial tubes. The process may be even more extensive and amount to a general infection of the entire body. All of the breathing apparatus excepting the smaller terminal portions in the lungs may be involved, and, as a matter of fact, the disease may, and often does, spread to these, thus producing pneumonia. In this connection it may be pointed out that pneumonia kills more people in the United States than any other disease excepting tuberculosis and heart disease. Many pneumonias begin as a common cold. Colds do not produce tuberculosis, yet unfortunately what is considered as a cold may be in reality the first symptoms of the white plague.

The causes of colds are multiform and not entirely understood. In every case, however, they are dependent upon the growth and activity of living germs which are always received from other people. It is true that almost everybody harbors disease organisms in the mouth and nose, and that these under favorable conditions will produce a cold in their host. But these germs in every case were received from some other person. In other words, colds are infectious. It used to be thought that sitting in a draft or a prolonged stay in the swimming pool would produce a cold. This is erroneous, but the chilling of the body which the draft produces and the weakening of the vital forces caused by too long a swim, lower the powers of resistance and permit germs which have hitherto been harmless to their host, to produce their disastrous effects.

It is not necessary to describe a cold. Everybody is familiar with it in all its variations, from the simple, ordinary coryza, which is a polite running at the nose, to the sore throat, the aching chest, fever and generally "knocked out" feeling. The cough, the sneeze, the headache and the varying degrees of inefficiency which a cold produces are, alas, only too well known. Common colds occur in epidemics and are distinctly contagious. They sweep through an entire household, an entire city, an entire state, attacking the young, the adolescent, the middle aged, and frequently carrying off the aged, the weak and the debilitated. Schools, factories, stores are suddenly crippled by epidemics of this sort and the complications and serious disorders following the disease add to the great economic loss produced in this way. Infection of the cavities beneath the cheeks and brows, ear derangements, chronic lung infections, rheumatism, heart disorders, kidney impairment and depressed vitality may all follow in the train of this widespread infection.

To prevent a cold it is necessary first of all to keep the body resistance at a high point of efficiency. This means that the body machinery should be kept in good order at all times. Good, wholesome food in proper amount, plenty of sleep, the careful attendance to the voiding of the body wastes, the taking of regular exercise in the open air, keeping the body clean, keeping the mouth and nose clean, the avoidance of hot, stuffy, dusty rooms, the avoidance of exposure to sudden changes of temperature, the prevention of the chilling of the body, either by cold or wet, are all protective measures. It should be borne in mind, however, that even robust persons may contract colds from people who have them.

The germs of colds leave the body in the secretions of the mouth and nose. They enter the body through the same route. Thus a careless sneezer and the person who does not cover his mouth and nose when he coughs are breeders of these infections. The little living bodies which cause colds are so small that a million could rest on the head of a pin. When a person coughs or sneezes a fine spray carrying with it untold numbers of these germs is spread into the surrounding atmosphere to a distance of several feet and may be easily taken into the mouth and nose with the respired air. More direct contact, such as by kissing, the common drinking cup, the common roller towel, by pipes, toys, pencils, fingers, food and other things which have been contaminated by the mouth and nose secretions of a person having a cold may also carry the disease.

It is an obligation on the part of persons having colds to see to it that they do not spread these colds to somebody else. The person who neglects to cover his nose and mouth when he sneezes and coughs, the careless spitter, the person who permits his germ-laden discharges to contaminate things which are going to be handled by other people, is a menace to the community. If such a person uses public swimming pools, if he is not amenable to reason and persists in distributing his infection, he should be avoided as a spreader of pestilence.

A good deal has been said about hardening people so that they will not contract colds. There is an element of danger in this, since to expose a weak person to the rigors of cold baths and cold drafts is apt to lower resistance, thus favoring the very condition which it is desired to avoid. At the same time, it should not be forgotten that the Arctic explorer does not ordinarily have colds so long as he stays out in the open, and that it is not the engineer and fireman in the cold, drafty cab who have colds, but those who ride in the close, dusty, overheated coaches behind. When all is said, it must be admitted that dusty, unventilated rooms perhaps play the greatest role in producing colds.

Since colds are a serious condition, they should be treated as such. A great many people think that they have an infallible remedy for breaking up a cold. This may be harmless in itself, but usually it is not and consists of a combination of harmful drugs and alcohol, the latter usually preponderating. The sufferer takes these preparations in large quantities and if he is strong enough he may survive them and eventually get the best of his cold. Self-medication or medication by untrained persons is always dangerous. It is especially dangerous to those having colds and should always be scrupulously avoided. As a rule, much time, inconvenience and suffering will be obviated by consulting an intelligent physician promptly. If this is not practicable a brisk saline may be taken and the patient put to bed. This gives his body an opportunity to regain its vitality and at the same time isolates him from other people. The sick room should be well ventilated and the windows so opened as to keep the air moving freely. It is also wise to moisten the air a little bit by putting a pan of water on the radiator or over the register or on the stove. The handkerchiefs and bedding used by the patient should be sterilized by boiling. Kissing, and the use of drinking cups and towels, etc., in common with other members of the household, should be forbidden, it being borne in mind constantly that colds are infectious and readily spread from one person to another.

Storing Lemons For Summer Use.

To the Editor:—I enjoy reading The Wisconsin Farmer very much, not only the home department but the whole paper. Now I am coming for advice. Could someone tell me how to store lemons for the summer? I generally buy a good supply while they are cheap and sometimes they dry or get too soft, and I thought perhaps some of the home department readers would have a better way of caring for them than I have. Mrs. L. W. H.

Salting Frozen Fish.

To the Editor:—I saw in the home department an inquiry about salting down fish. This is the way I used to salt mine and it always proved satisfactory.

First I put the frozen fish into a vessel of cold water and let it thaw until it drops the ice. Then clean the fish, but do not wash it. It is then ready for salting. Coarse barrel salt is best.

J. Krogh,

Recipes.

Cheese Straws.—One cupful flour, five tablespoonfuls lard, one-fourth teaspoonful salt, one-fourth cupful water. Mix as for pie crust and roll out thin. Sprinkle half with grated cheese; place the other half over this and press them together. Repeat two or three times, then cut into strips about half an inch wide and three inches long. Bake in a hot oven until crisp and brown.

Eggless Chocolate Cake.—Two squares chocolate, one cupful sugar, one tablespoonful melted shortening, one teaspoonful soda, one cupful milk, one and one-half cupfuls flour, one teaspoonful vanilla, one-third teaspoonful salt. Dissolve the soda in a half cupful of milk. Grate the chocolate and melt it in the remainder of the milk. Mix together the sugar and shortening, add vanilla, salt, the soda dissolved in the milk, and the flour; beat thoroughly. Then beat in the milk, still hot, in which the chocolate has been melted. Bake in a loaf about fifty minutes in a moderate oven.

Cherry Pudding.—Two cupfuls stale cake crumbs, one quart milk, one and one-half cupfuls canned red cherries, one-half cupful sugar. Soak the crumbs in the milk for thirty minutes and then add the sugar and the cherries, which should be well drained. If the cake is not well flavored, add a few drops of vanilla, or almond extract. Turn into a buttered baking dish and bake about an hour in a moderate oven. Serve hot with hard sauce, containing a little of the cherry juice.

Cabbage au Gratin.—Two cupfuls chopped boiled cabbage (seasoned lightly with salt and pepper), one tablespoonful flour, one tablespoonful butter, one-half cupful buttered crumbs, one cupful milk, few grains of pepper, one-half teaspoonful salt, one-fourth cupful grated cheese. Put the chopped cabbage into a buttered baking dish; pour over this white sauce made as follows:
